| 25 | Divergence of tensors in spherical geometry up to third order | 166 |

1 Introduction

We present a statistical analysis of turbulent convection in stars within our Reynolds-Averaged Navier Stokes (RANS) framework in spherical geometry which we derived from first principles (see Sect.17 and further sections for details). The analysed data include **core convection during oxygen burning in a 15 M_⊙ supernova progenitor, envelope convection in a 5 M_⊙ red giant and core convection during core helium flash and hydrogen injection flash of a 1.25 M_⊙ star**. These simulations have been partially already described by [Meakin and Arnett \[2007\]](#), [Arnett et al. \[2010\]](#), [Viallet et al. \[2013\]](#) and [Mocák et al. \[2009, 2011\]](#).

We obtain our 1D RANS equations by introducing two types of averaging: statistical averaging and horizontal averaging [[Besnard et al., 1992](#), [Viallet et al., 2013](#)]. In practice, statistical averages are computed by performing a time average (the ergodic hypothesis). Therefore, the combined average of a quantity q is defined as

$$\bar{q}(r, t) = \frac{1}{T\Delta\Omega} \int_{t-T/2}^{t+T/2} q(r, \theta, \phi, t') d\Omega dt' \quad (1)$$

where $d\Omega = \sin\theta d\theta d\phi$ is the solid angle in spherical coordinates, T is the averaging time period, and $\Delta\Omega$ is total solid angle being averaged over.

The flow variables are then decomposed into mean and fluctuation $q = \bar{q} + q'$, noting that $\bar{q}' = 0$ by construction. Similarly, we introduce Favre (or density weighted) averaged quantities by

$$\tilde{q} = \frac{\bar{\rho}q}{\bar{\rho}} \quad (2)$$

which defines a complimentary decomposition of the flow into mean and fluctuations according to $q = \tilde{q} + q''$. Here, q'' is the Favrian fluctuation and its mean is zero when Favre averaged $\tilde{q}'' = 0$. For a more complete elaboration on the algebra of these averaging procedures we refer the reader to [Chassaing et al. \[2010\]](#). All calculated mean fields shown for a given equation in next sections were additionally multiplied by $4\pi r^2$. It gives us advantage to reflect changing volume of our computational domain as a function of radius and visualize better volume integral budgets of the individual mean fields, which are then equivalent to the area below corresponding mean field profile. We explore not only general properties of mean fields but also their resolution dependency, wedge-size dependency, convection zone depth dependency, position of driving source dependency and validity of few turbulence models.

2 Summary of Reynolds-averaged Navier Stokes equations in spherical geometry

2.1 Various mean fields equations (first-order moments)

$$\tilde{D}_t \bar{\rho} = -\bar{\rho} \tilde{d} + \mathcal{N}_\rho \quad (3)$$

$$\bar{\rho} \tilde{D}_t \tilde{u}_r = -\nabla_r \tilde{R}_{rr} - \overline{G_r^M} - \partial_r \bar{P} + \bar{\rho} \tilde{g}_r + \mathcal{N}_{ur} \quad (4)$$

$$\bar{\rho} \tilde{D}_t \tilde{u}_\theta = -\nabla_r \tilde{R}_{\theta r} - \overline{G_\theta^M} - (1/r) \bar{\partial}_\theta \bar{P} + \mathcal{N}_{u\theta} \quad (5)$$

$$\bar{\rho} \tilde{D}_t \tilde{u}_\phi = -\nabla_r \tilde{R}_{\phi r} - \overline{G_\phi^M} + \mathcal{N}_{u\phi} \quad (6)$$

$$\bar{\rho} \tilde{D}_t \tilde{c}_I = -\nabla_r (f_I + f_T) - \bar{P} \bar{d} - W_P + \mathcal{S} + \mathcal{N}_{\epsilon I} \quad (7)$$

$$\bar{\rho} \tilde{D}_t \tilde{c}_k = -\nabla_r (f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{\epsilon k} \quad (8)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_t = -\nabla_r (f_I + f_T + f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i - \bar{P} \bar{d} + W_b + \mathcal{S} + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{\epsilon t} \quad (9)$$

$$\bar{\rho} \tilde{D}_t \tilde{h} = -\nabla_r f_h - \Gamma_1 \bar{P} \bar{d} - \Gamma_1 W_P + \Gamma_3 \mathcal{S} + \Gamma_3 \nabla_r f_T + \mathcal{N}_h \quad (10)$$

$$\bar{\rho} \tilde{D}_t \tilde{s} = -\nabla_r f_s + \overline{(\nabla \cdot F_T) / T} + \overline{S / T} + \mathcal{N}_s \quad (11)$$

$$\overline{D}_t \bar{P} = -\nabla_r f_P - \Gamma_1 \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) \mathcal{S} + (\Gamma_3 - 1) \nabla_r f_T + \mathcal{N}_P \quad (12)$$

$$\overline{D}_t \bar{T} = -\nabla_r f_T + (1 - \Gamma_3) \bar{T} \bar{d} + (2 - \Gamma_3) \bar{T}' \bar{d}' + \overline{(\nabla \cdot F_T) / \rho c_v} + \overline{(\tau_{ij} \partial_i u_j) / \rho c_v} + \overline{\epsilon_{\text{nuc}} / c_v} + \mathcal{N}_T \quad (13)$$

$$\bar{\rho} \tilde{D}_t \tilde{X}_\alpha = -\nabla_r f_\alpha + \bar{\rho} \tilde{X}_\alpha^{\text{nuc}} + \mathcal{N}_\alpha \quad (14)$$

$$\bar{\rho} \tilde{D}_t \tilde{A} = -\nabla_r f_A - \overline{\rho A^2 \Sigma_\alpha (\dot{X}_\alpha^{\text{nuc}} / A_\alpha)} + \mathcal{N}_A \quad (15)$$

$$\bar{\rho} \tilde{D}_t \tilde{Z} = -\nabla_r f_Z - \overline{\rho Z A \Sigma_\alpha (\dot{X}_\alpha^{\text{nuc}} / A_\alpha)} + \overline{\rho A \Sigma_\alpha (Z_\alpha \dot{X}_\alpha^{\text{nuc}} / A_\alpha)} + \mathcal{N}_Z \quad (16)$$

$$\bar{\rho} \tilde{D}_t \tilde{j}_z = -\nabla_r f_{jz} + \mathcal{N}_{jz} \quad (17)$$

2.2 Mean turbulent mass flux and mean density-specific volume covariance equation (second-order moments)

$$\bar{\rho} \tilde{D}_t \overline{u'_r''} = -(\bar{\rho}' \overline{u'_r u'_r} / \bar{\rho}) \partial_r \bar{\rho} + (\tilde{R}_{rr} / \bar{\rho}) / \partial_r \bar{\rho} - \bar{\rho} \nabla_r (\overline{u'_r''} \overline{u'_r''}) + \nabla_r \overline{\rho' u'_r u'_r} - \bar{\rho} \overline{u''_r} \nabla_r \bar{u}_r + \bar{\rho} \overline{u'_r d''} - b \partial_r \bar{P} + \overline{\rho' v \partial_r P'} + \mathcal{G}_a + \mathcal{N}_a \quad (18)$$

$$\overline{D}_t b = +\bar{v} \nabla_r \bar{\rho} \overline{u''_r} - \bar{\rho} \nabla_r (\overline{u'_r v'}) + 2 \bar{\rho} \overline{v' d'} + \mathcal{N}_b \quad (19)$$

2.3 Mean Reynolds stress equations (second-order moments)

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{rr}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{rrr}^R + f_p^r + f_p^r + f_{\tau}^{rr} + f_{\tau}^{rr}) + \overline{u''_r} \partial_r \bar{P} + \overline{u''_r} \partial_r \tilde{R}_{rr} \partial_r \tilde{u}_r + \overline{P' \nabla_r u''_r} + \overline{P' \nabla_r u''_r} - \overline{u''_r G_r^M} - \overline{u''_r G_r^M} - \overline{G_{rr}^R} - \varepsilon_{\tau}^{rr} - \varepsilon_{\tau}^{rr} \quad (20)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{r\theta}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{r\theta r}^R + f_p^{\theta} + f_{\tau}^{r\theta} + f_{\tau}^{\theta r}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{rr} \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{u}_r + \overline{P' \nabla_r u''_r} + \overline{P' \nabla_r u''_r} - \overline{u''_r G_{\theta}^M} - \overline{u''_r G_{\theta}^M} - \overline{G_{r\theta}^R} - \varepsilon_{\tau}^{r\theta} - \varepsilon_{\tau}^{r\theta} \quad (21)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{r\phi}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{r\phi r}^R + f_p^{\phi} + f_{\tau}^{r\phi} + f_{\tau}^{\phi r}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{rr} \partial_r \tilde{u}_{\phi} - \tilde{R}_{\phi r} \partial_r \tilde{u}_r + \overline{P' \nabla_r u''_r} + \overline{P' \nabla_r u''_r} - \overline{u''_r G_{\phi}^M} - \overline{u''_r G_{\phi}^M} - \overline{G_{r\phi}^R} - \varepsilon_{\tau}^{r\phi} - \varepsilon_{\tau}^{r\phi} \quad (22)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta r}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\theta rr}^R + f_p^{\theta} + f_{\tau}^{\theta r} + f_{\tau}^{r\theta}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\theta r} \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{u}_{\theta} + \overline{P' \nabla_{\theta} u''_r} + \overline{P' \nabla_{\theta} u''_r} - \overline{u''_r G_{\theta}^M} - \overline{u''_r G_{\theta}^M} - \overline{G_{\theta r}^R} - \varepsilon_{\tau}^{\theta r} - \varepsilon_{\tau}^{\theta r} \quad (23)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\theta}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\theta\theta r}^R + f_p^{\theta\theta} + f_{\tau}^{\theta\theta}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\theta r} \partial_r \tilde{u}_{\theta} - \tilde{R}_{\theta r} \partial_r \tilde{u}_{\theta} + \overline{P' \nabla_{\theta} u''_r} + \overline{P' \nabla_{\theta} u''_r} - \overline{u''_r G_{\theta}^M} - \overline{u''_r G_{\theta}^M} - \overline{G_{\theta\theta}^R} - \varepsilon_{\tau}^{\theta\theta} - \varepsilon_{\tau}^{\theta\theta} \quad (24)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\phi}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\theta\phi r}^R + f_p^{\theta\phi} + f_{\tau}^{\phi\theta}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\theta r} \partial_r \tilde{u}_{\phi} - \tilde{R}_{\phi r} \partial_r \tilde{u}_{\theta} + \overline{P' \nabla_{\theta} u''_r} + \overline{P' \nabla_{\theta} u''_r} - \overline{u''_r G_{\phi}^M} - \overline{u''_r G_{\phi}^M} - \overline{G_{\theta\phi}^R} - \varepsilon_{\tau}^{\theta\phi} - \varepsilon_{\tau}^{\phi\theta} \quad (25)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi r}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\phi rr}^R + f_p^{\phi} + f_{\tau}^{\phi r} + f_{\tau}^{r\phi}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\phi r} \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{u}_{\phi} + \overline{P' \nabla_{\phi} u''_r} + \overline{P' \nabla_{\phi} u''_r} - \overline{u''_r G_{\phi}^M} - \overline{u''_r G_{\phi}^M} - \overline{G_{\phi r}^R} - \varepsilon_{\tau}^{\phi r} - \varepsilon_{\tau}^{\phi r} \quad (26)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi\theta}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\phi\theta r}^R + f_p^{\phi\theta} + f_{\tau}^{\theta\phi}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\phi r} \partial_r \tilde{u}_{\theta} - \tilde{R}_{\theta r} \partial_r \tilde{u}_{\phi} + \overline{P' \nabla_{\phi} u''_r} + \overline{P' \nabla_{\phi} u''_r} - \overline{u''_r G_{\theta}^M} - \overline{u''_r G_{\theta}^M} - \overline{G_{\phi\theta}^R} - \varepsilon_{\tau}^{\phi\theta} - \varepsilon_{\tau}^{\theta\phi} \quad (27)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi\phi}/\bar{\rho} \right) = -\nabla_r (\tilde{F}_{\phi\phi r}^R + f_p^{\phi\phi} + f_{\tau}^{\phi\phi}) - \overline{u''_r} \partial_r \bar{P} - \tilde{R}_{\phi r} \partial_r \tilde{u}_{\phi} - \tilde{R}_{\phi r} \partial_r \tilde{u}_{\phi} + \overline{P' \nabla_{\phi} u''_r} + \overline{P' \nabla_{\phi} u''_r} - \overline{u''_r G_{\phi}^M} - \overline{u''_r G_{\phi}^M} - \overline{G_{\phi\phi}^R} - \varepsilon_{\tau}^{\phi\phi} - \varepsilon_{\tau}^{\phi\phi} \quad (28)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{rr}/\bar{\rho} \right) = -\nabla_r (2f_k^r + 2f_P) + 2W_b - 2\tilde{R}_{rr} \partial_r \tilde{u}_r + 2\overline{P' \nabla_r u''_r} + 2\mathcal{G}_k^r + \mathcal{N}_{Rrr} \quad (29)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\theta}/\bar{\rho} \right) = -\nabla_r (2f_k^{\theta}) - 2\tilde{R}_{\theta r} \partial_r \tilde{u}_{\theta} + 2\overline{P' \nabla_{\theta} u''_r} + 2\mathcal{G}_k^{\theta} + \mathcal{N}_{R\theta\theta} \quad (30)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi\phi}/\bar{\rho} \right) = -\nabla_r (2f_k^{\phi}) - 2\tilde{R}_{\phi r} \partial_r \tilde{u}_{\phi} + 2\overline{P' \nabla_{\phi} u''_r} + 2\mathcal{G}_k^{\phi} + \mathcal{N}_{R\phi\phi} \quad (31)$$

2.4 Mean turbulent kinetic energy equations (second-order moments)

$$\bar{\rho} \tilde{D}_t \tilde{k} = -\nabla_r (f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \mathcal{N}_k \quad (32)$$

$$\bar{\rho} \tilde{D}_t \tilde{k}^r = -\nabla_r (f_k^r + f_P) - \tilde{R}_{rr} \partial_r \tilde{u}_r + W_b + \overline{P' \nabla_r u''_r} + \mathcal{G}_k^r + \mathcal{N}_{kr} \quad (33)$$

$$\bar{\rho} \tilde{D}_t \tilde{k}^h = -\nabla_r f_k^h - (\tilde{R}_{\theta r} \partial_r \tilde{u}_{\theta} + \tilde{R}_{\phi r} \partial_r \tilde{u}_{\phi}) + (\overline{P' \nabla_{\theta} u''_r} + \overline{P' \nabla_{\phi} u''_r}) + \mathcal{G}_k^h + \mathcal{N}_{kh} \quad (34)$$

$$(35)$$

2.5 Mean flux equations (second-order moments)

$$\bar{\rho}\tilde{D}_t(f_I/\bar{\rho}) = -\nabla_r f_I^r - f_I \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{\epsilon}_I - \overline{\epsilon''_I \partial_r \bar{P}} - \overline{u''_r (Pd)} + \overline{u''_r (\mathcal{S} + \nabla \cdot F_T)} + \mathcal{G}_I + \mathcal{N}_{fI} \quad (36)$$

$$\bar{\rho}\tilde{D}_t(f_h/\bar{\rho}) = -\nabla_r f_h^r - f_h \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{h} - \overline{h'' \partial_r \bar{P}} - \overline{h'' \partial_r \bar{P'}} - \Gamma_1 \overline{u''_r (Pd)} + \Gamma_3 \overline{u''_r (\mathcal{S} + \nabla \cdot F_T)} + \mathcal{G}_h + \mathcal{N}_h \quad (37)$$

4 Profiles and intergral budgets of mean fields equations

4.1 Mean continuity equation

$$\tilde{D}_t \bar{\rho} = -\bar{\rho} \tilde{d} + \mathcal{N}_\rho \quad (62)$$

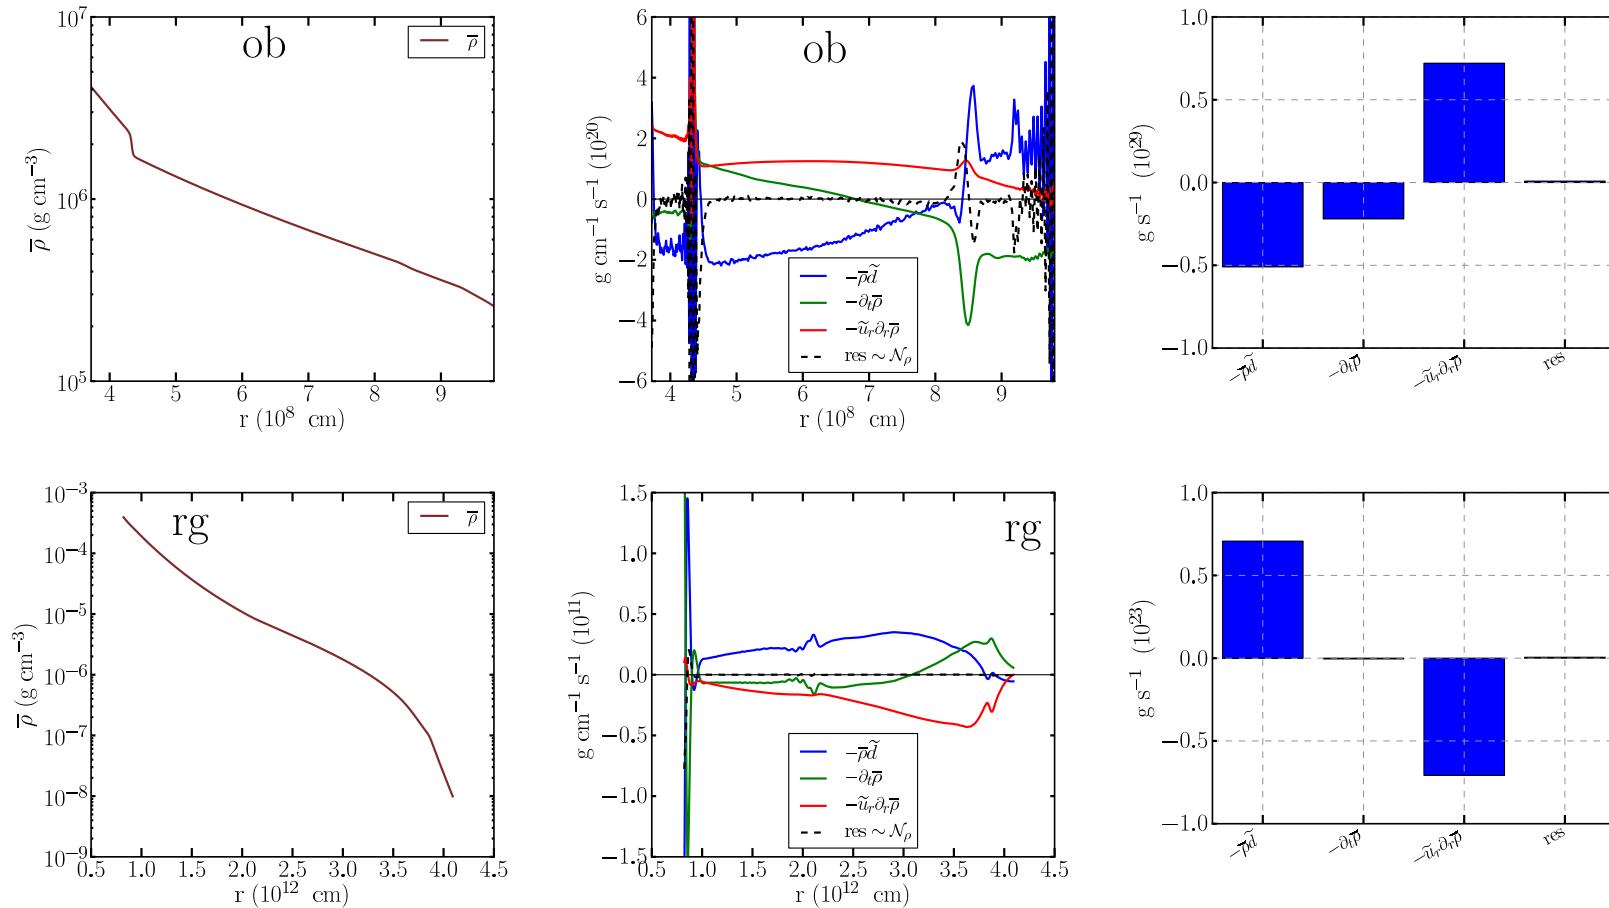

Figure 3: Mean continuity equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.2 Mean radial momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_r = -\nabla_r \tilde{R}_{rr} - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} \tilde{g}_r + \mathcal{N}_{ur} \quad (63)$$

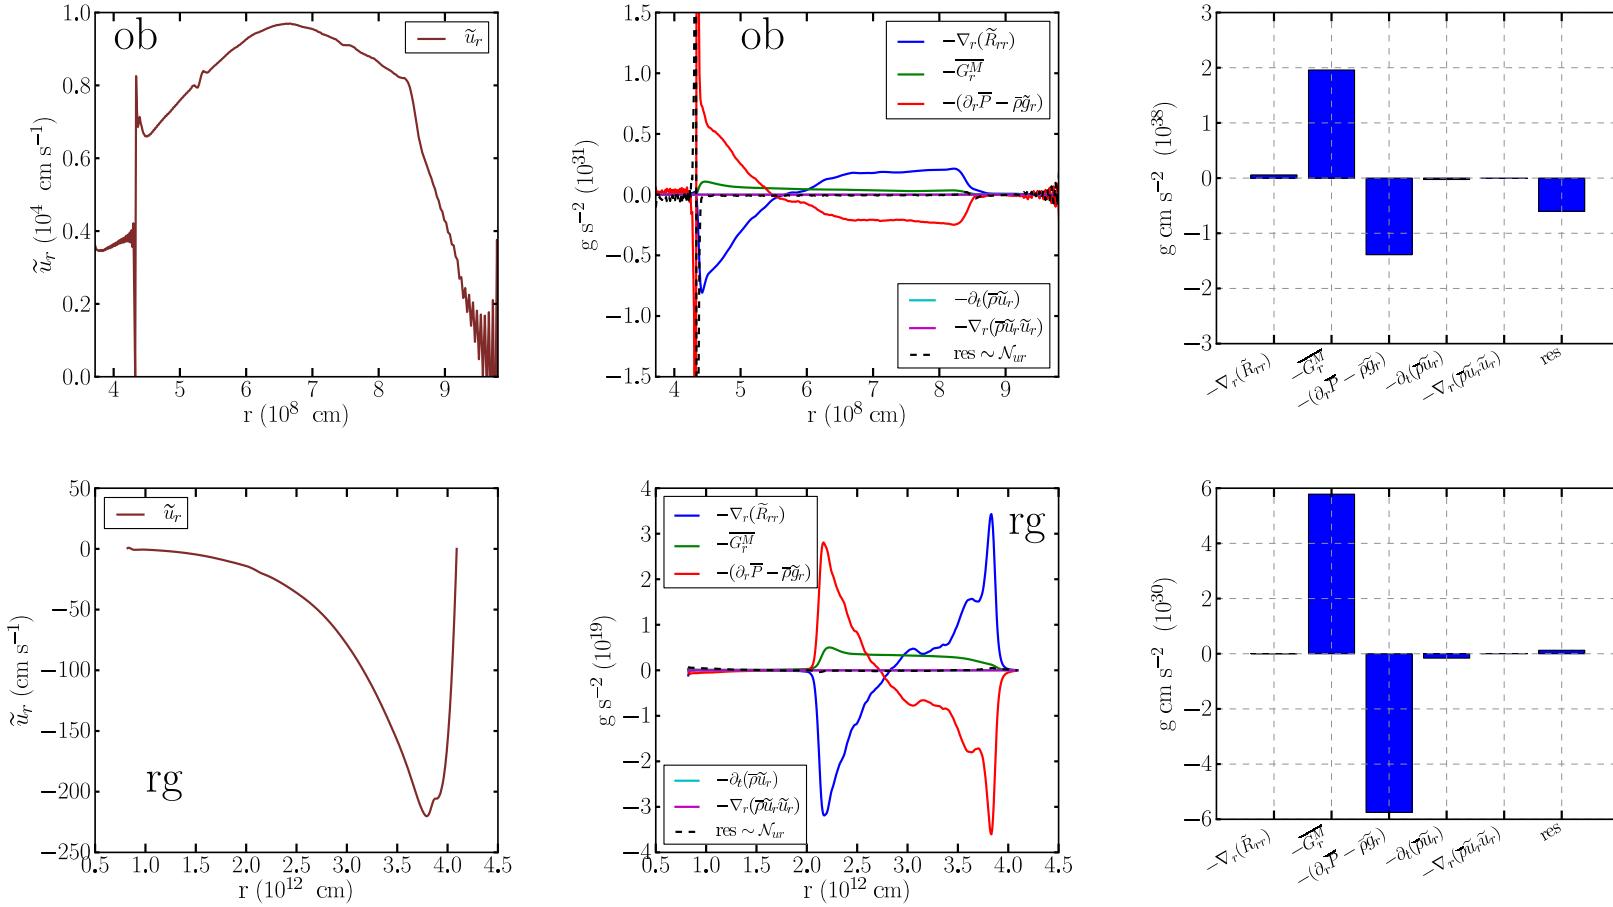

Figure 4: Mean radial momentum equation. Model **ob.3D.mr** (upper panels) and model **rg.3D.mr** (lower panels).

4.3 Mean azimuthal momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_\theta = -\nabla_r \tilde{R}_{\theta r} - \overline{G_\theta^M} - (1/r) \overline{\partial_\theta P} + \mathcal{N}_{u\theta} \quad (64)$$

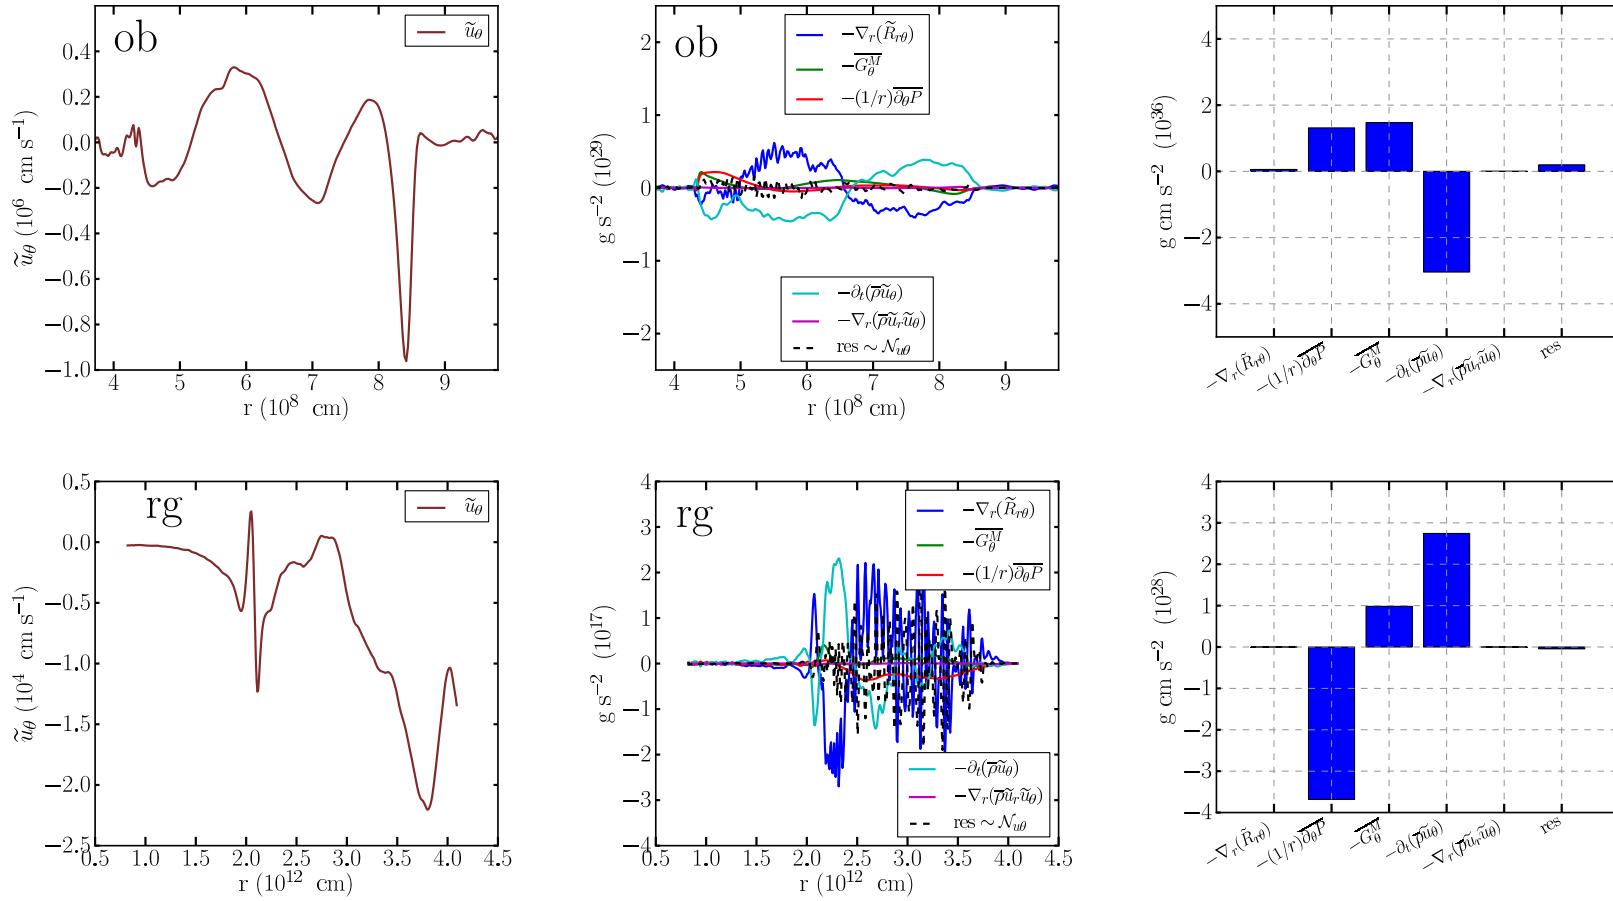

Figure 5: Mean azimuthal momentum equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.4 Mean polar momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_\phi = -\nabla_r \tilde{R}_{\phi r} - \overline{G_\phi^M} + \mathcal{N}_{u\phi} \quad (65)$$

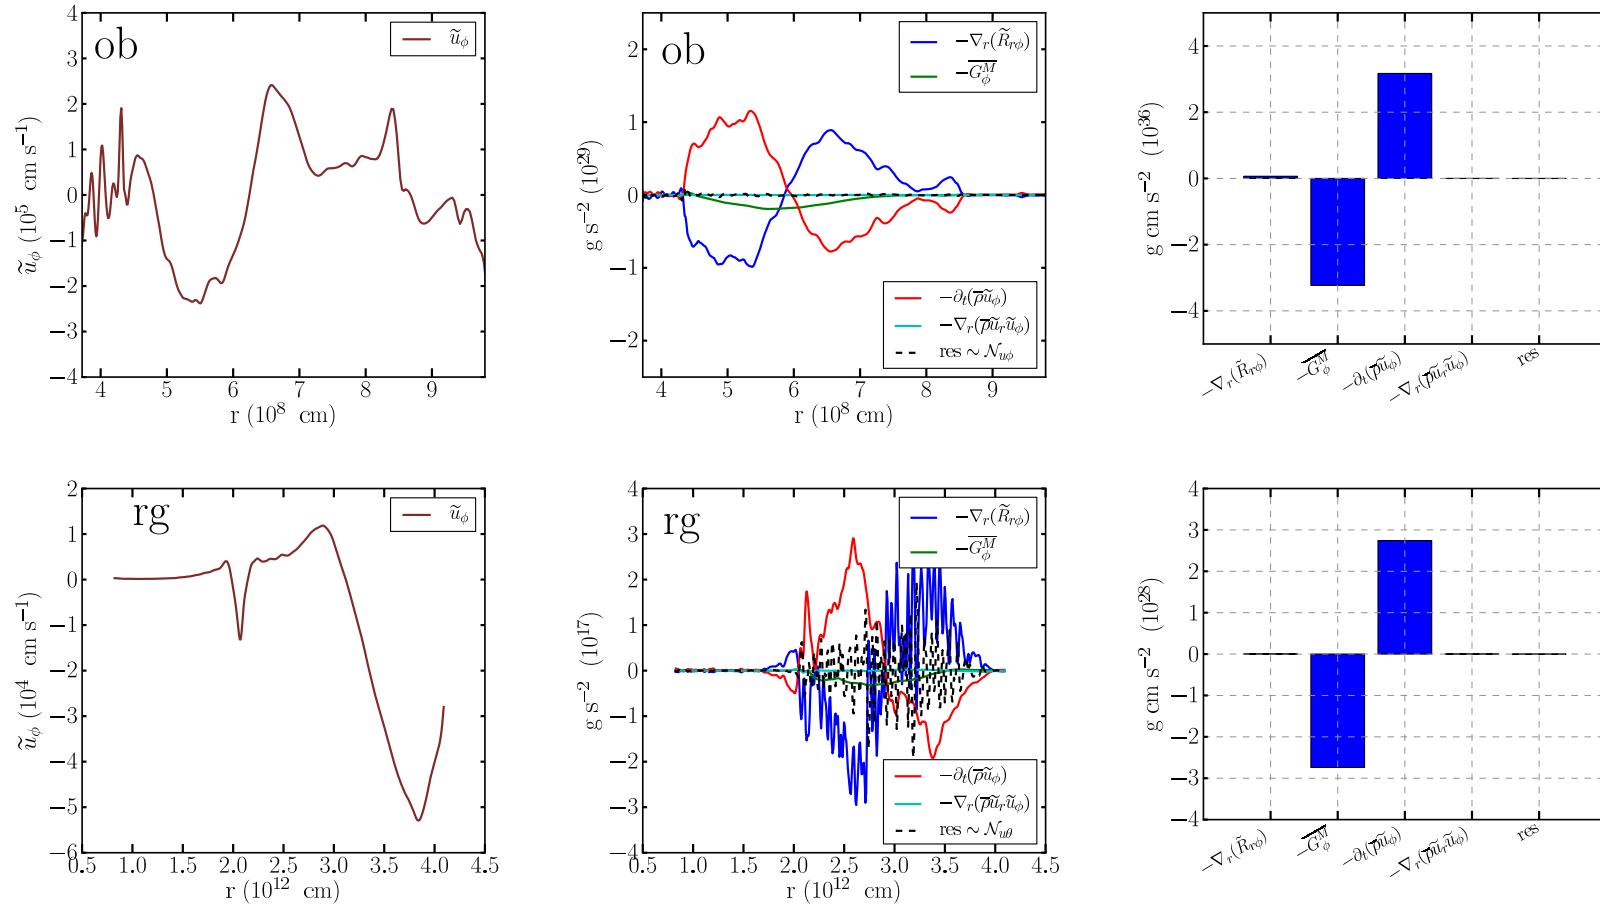

Figure 6: Mean polar omentum equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.5 Mean internal energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_I = -\nabla_r(f_I + f_T) - \bar{P} \bar{d} - W_P + S + \mathcal{N}_{\epsilon I} \quad (66)$$

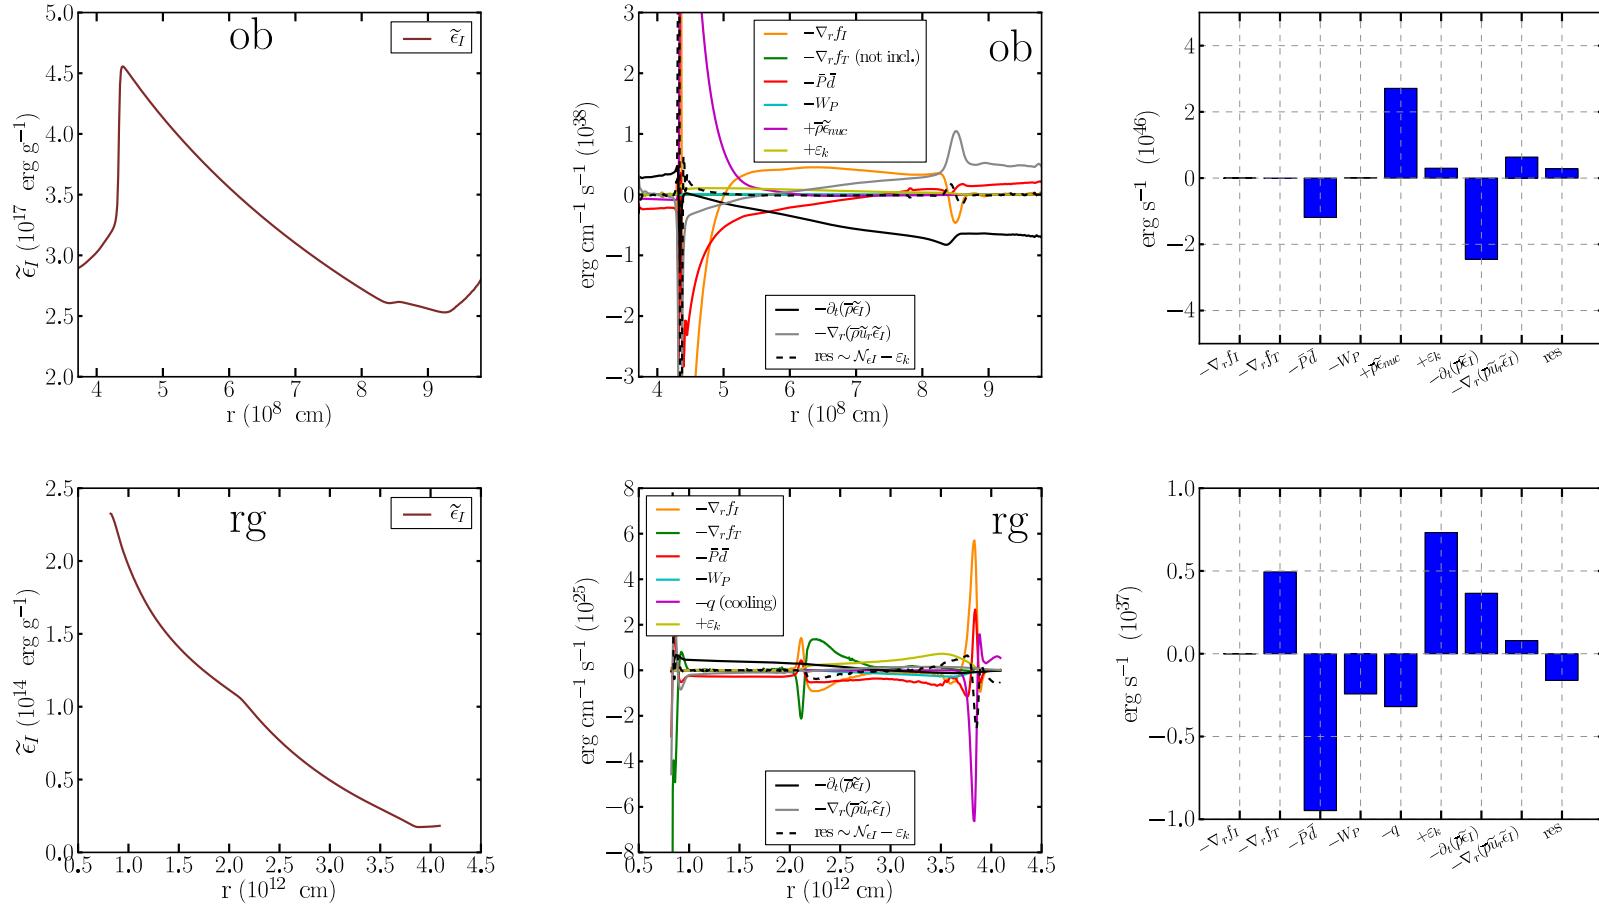

Figure 7: Mean internal energy equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.6 Mean kinetic energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_k = -\nabla_r(f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{ek} \quad (67)$$

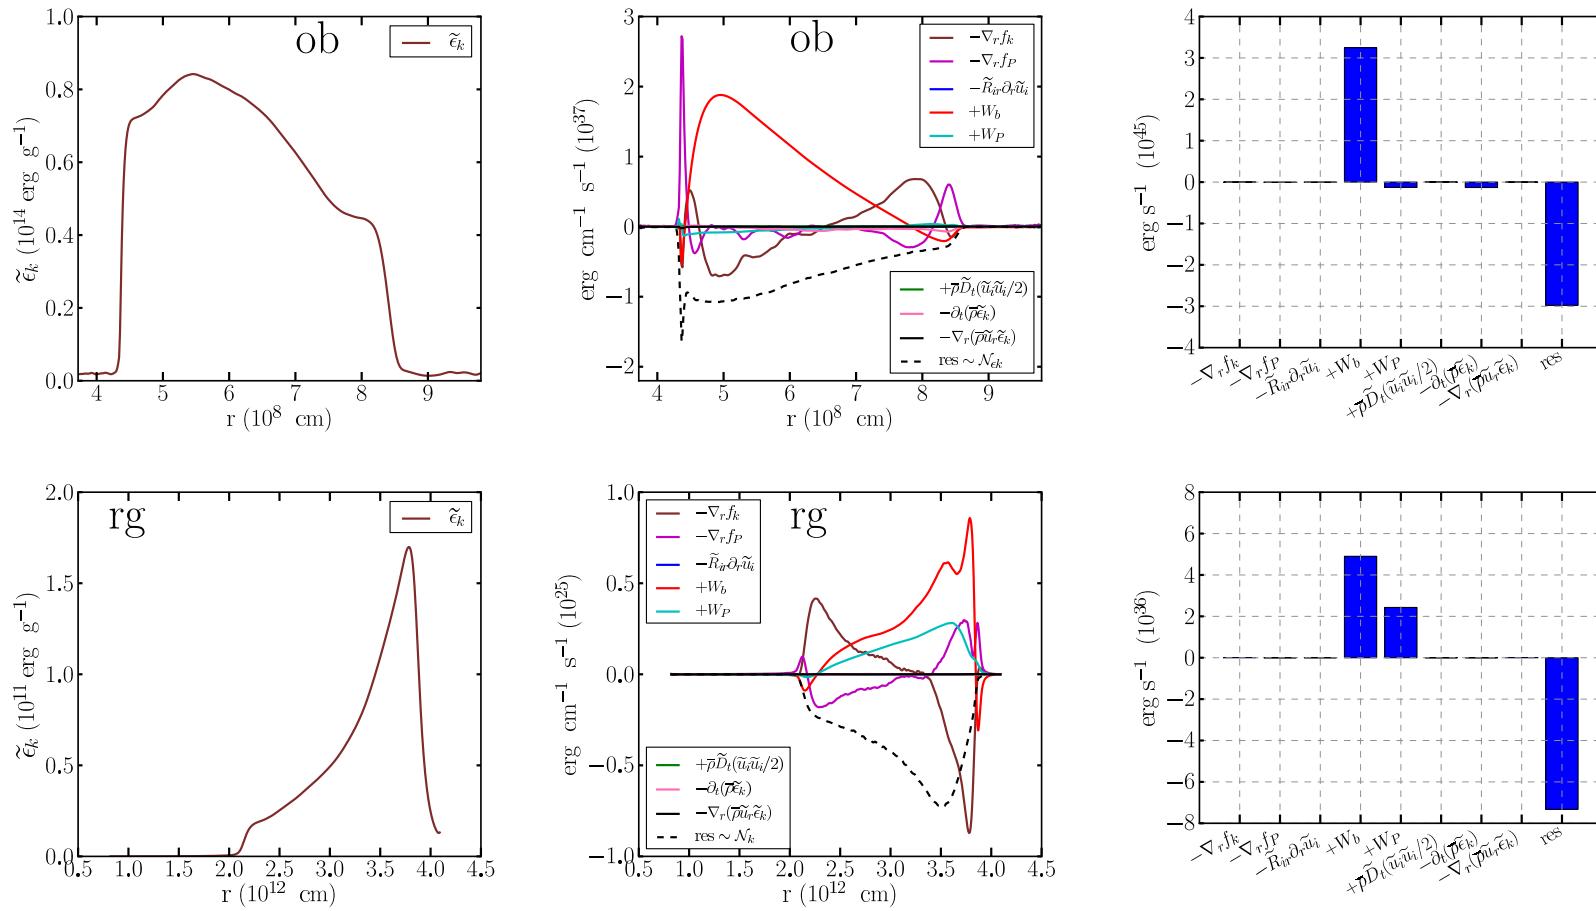

Figure 8: Mean kinetic energy equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.7 Mean total energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_t = -\nabla_r(f_I + f_T + f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i - \bar{P} \bar{d} + W_b + \mathcal{S} + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{et} \quad (68)$$

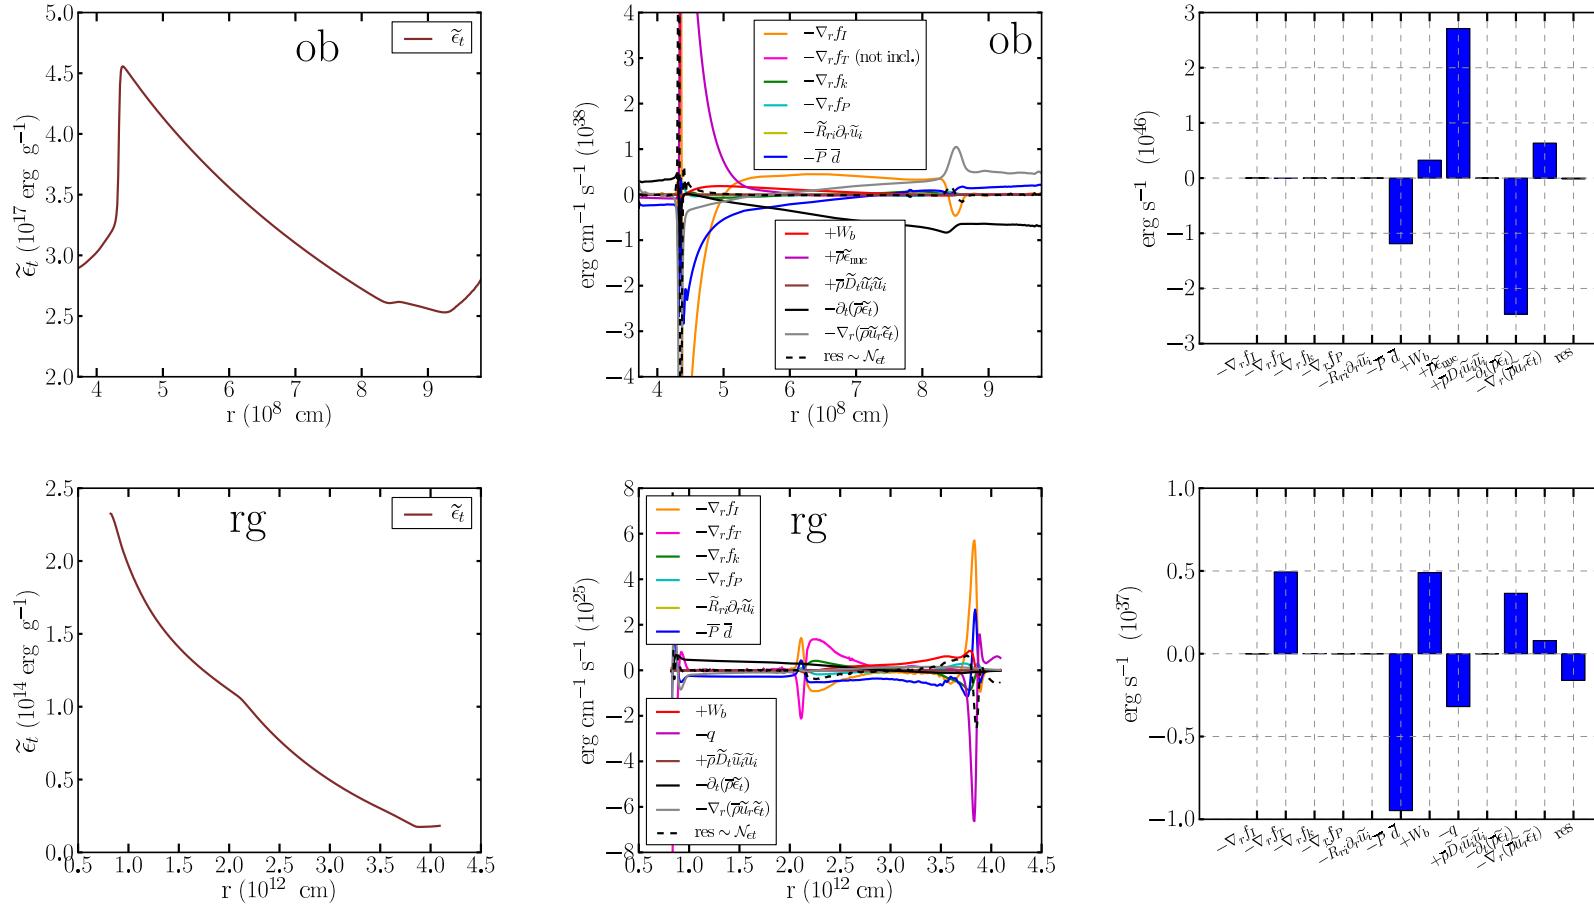

Figure 9: Mean total energy equation. Model **ob.3D.mr** (upper panels) and model **rg.3D.mr** (lower panels).

4.8 Mean entropy equation

$$\bar{\rho} \tilde{D}_t \tilde{s} = -\nabla_r f_s - (\nabla \cdot F_T)/T + \bar{\mathcal{S}}/T + \mathcal{N}_s \quad (69)$$

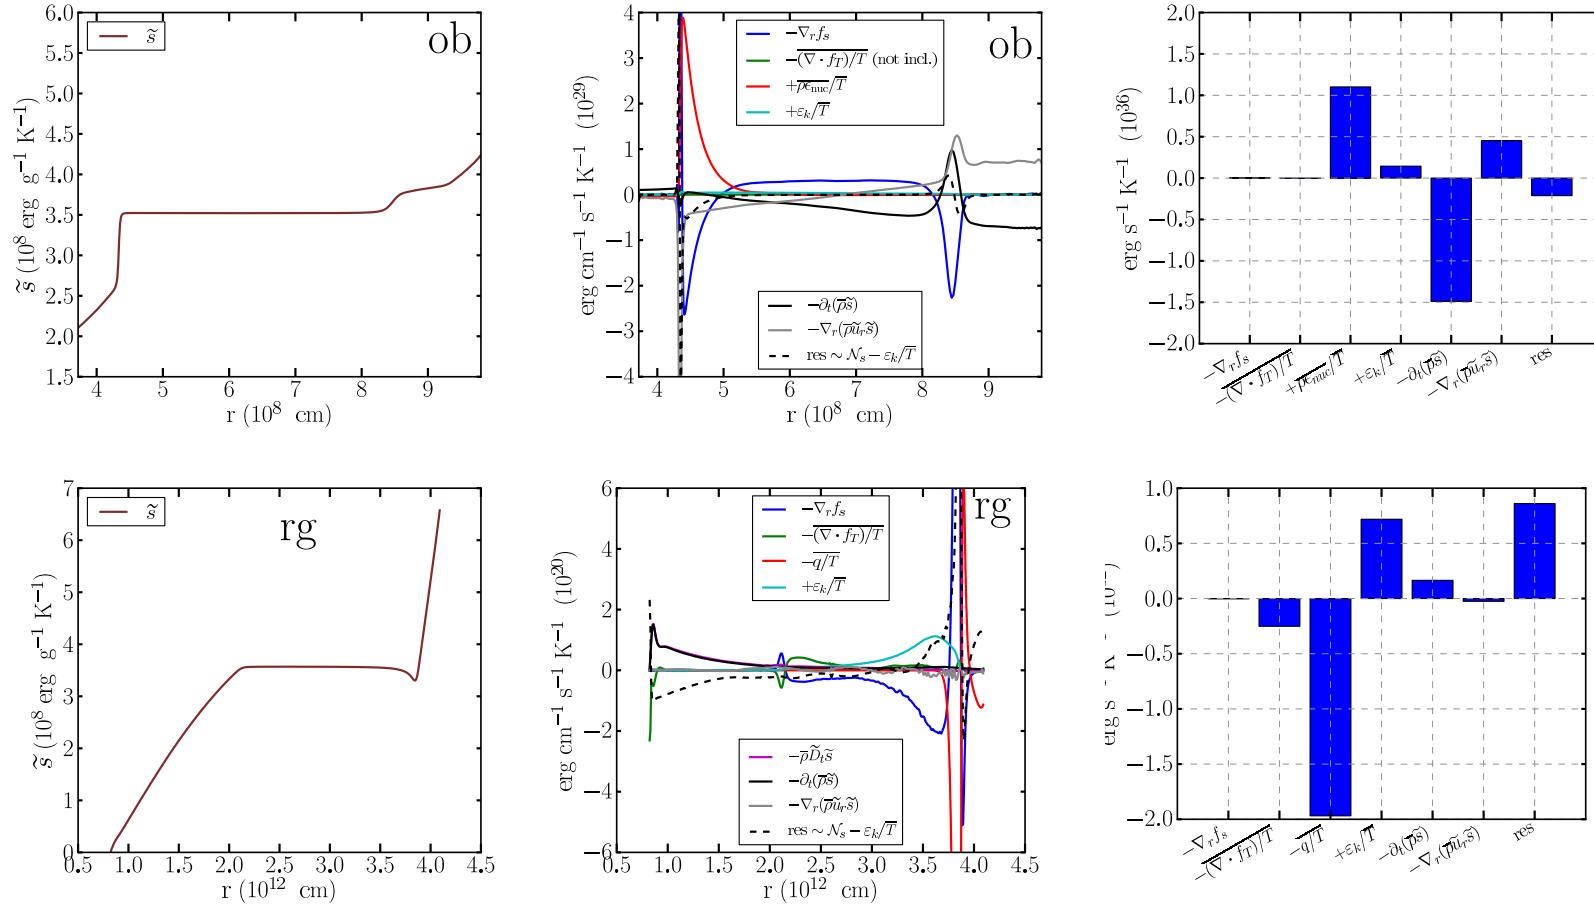

Figure 10: Mean entropy equation. Model ob.3D.2hp (upper panels) and model rg.3D.mr (lower panels).

4.9 Mean pressure equation

$$\bar{D}_t \bar{P} = -\nabla_r f_P - \Gamma_1 \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) \mathcal{S} + (\Gamma_3 - 1) \nabla_r f_T + \mathcal{N}_P \quad (70)$$

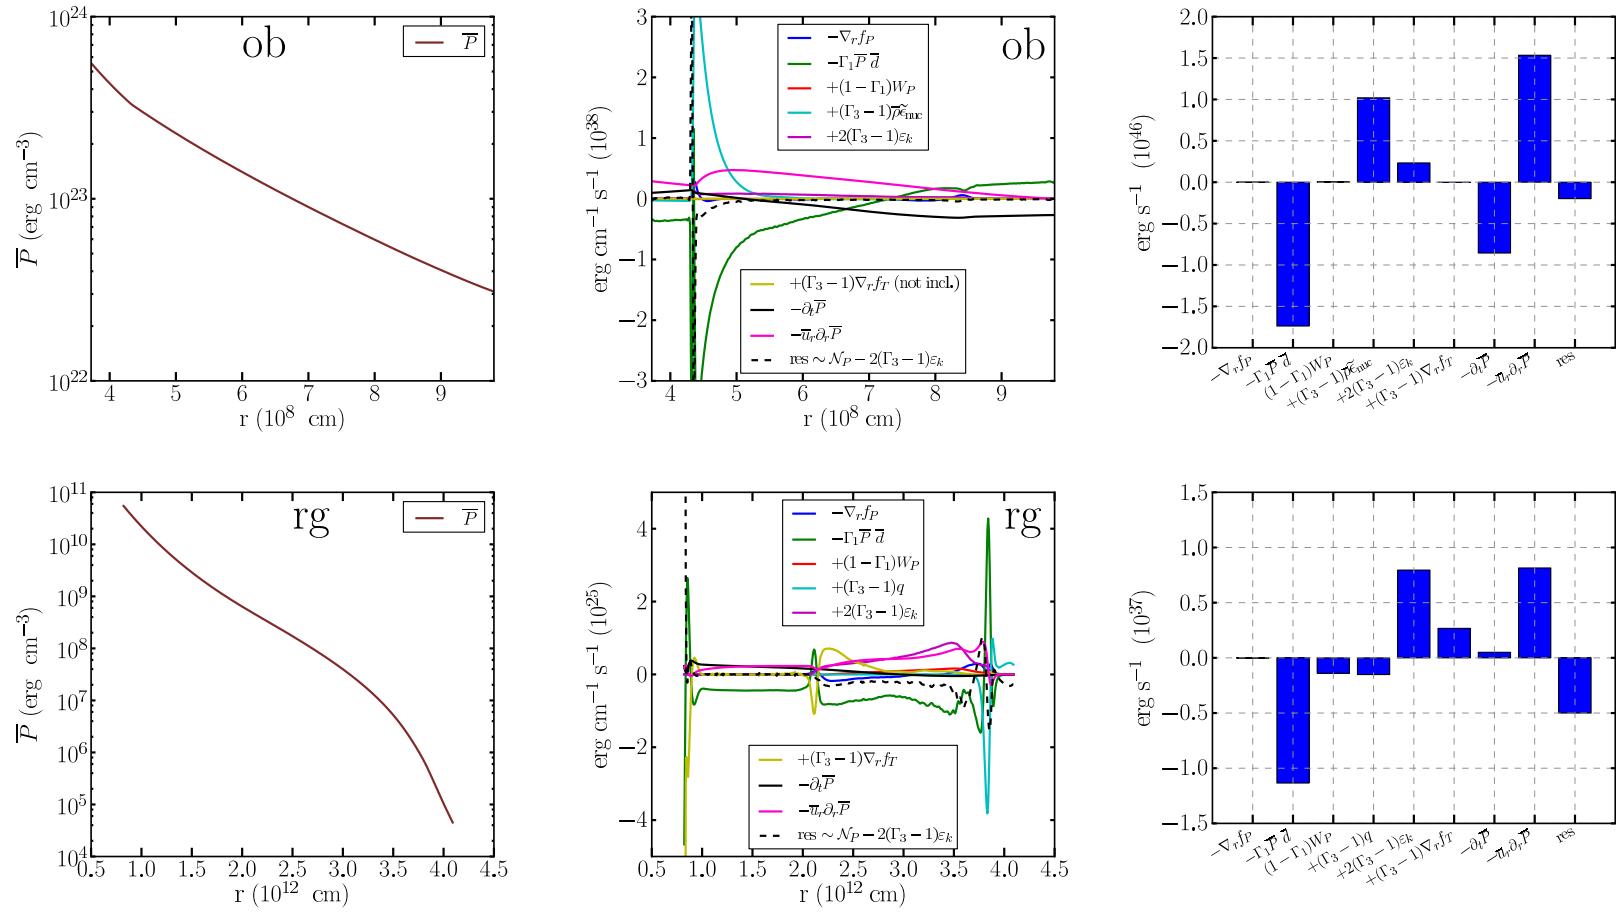

Figure 11: Mean pressure equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.10 Mean enthalpy equation

$$\bar{\rho} \tilde{D}_t \tilde{h} = -\nabla_r f_h - \Gamma_1 \bar{P} \bar{d} - \Gamma_1 W_P + \Gamma_3 \mathcal{S} + \Gamma_3 \nabla_r f_T + \mathcal{N}_h \quad (71)$$

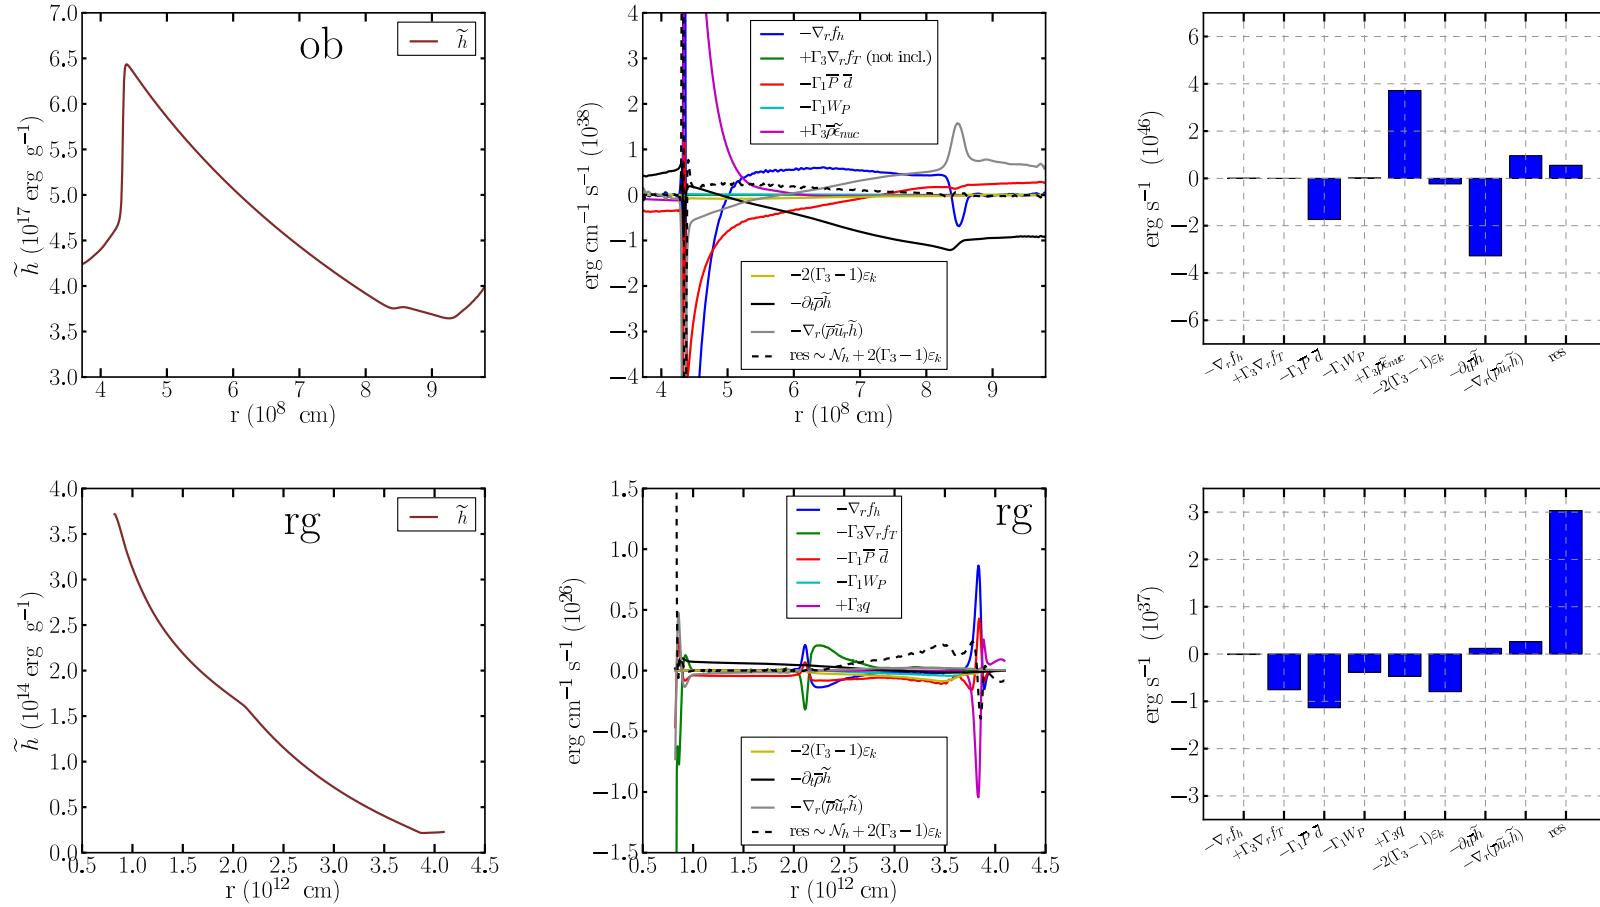

Figure 12: Mean enthalpy equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.11 Mean angular momentum equation (z-component)

$$\bar{\rho} \tilde{D}_t \tilde{j}_z = -\nabla_r f_{jz} + \mathcal{N}_{jz} \quad (72)$$

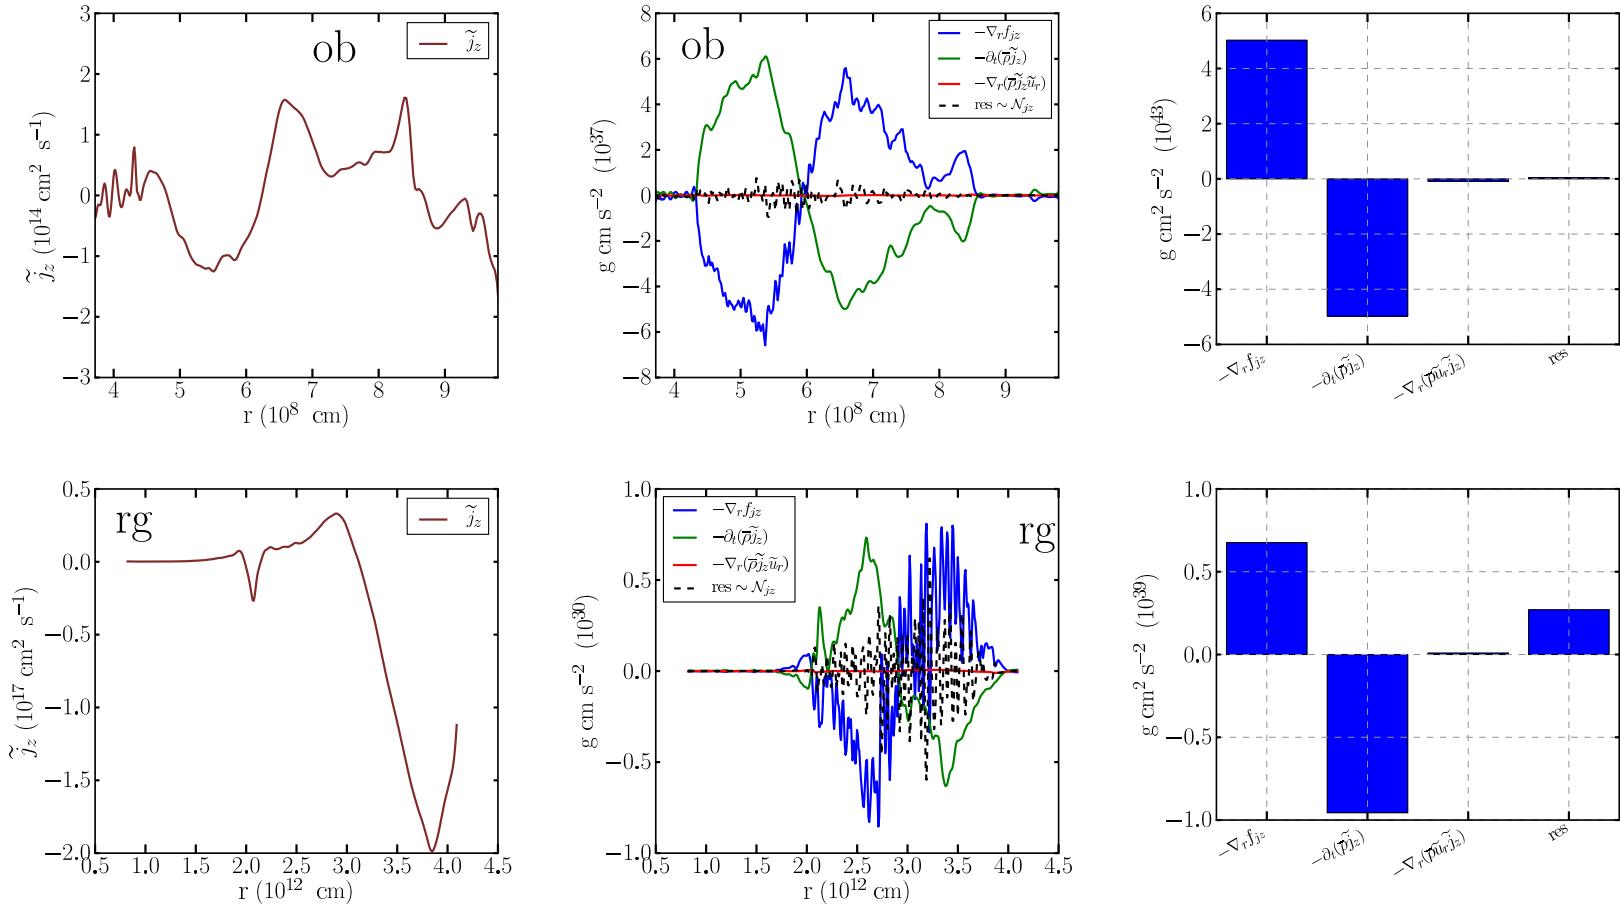

Figure 13: Mean angular momentum equation. Model **ob.3D.mr** (upper panels) and model **rg.3D.mr** (lower panels).

4.12 Mean composition equation

$$\bar{\rho} \tilde{D}_t \tilde{X}_\alpha = -\nabla_r f_\alpha + \bar{\rho} \tilde{X}_\alpha^{\text{nuc}} + \mathcal{N}_\alpha \quad \bar{\rho} \tilde{D}_t \tilde{A} = -\nabla_r f_A - \overline{\rho A^2 \Sigma_\alpha (\dot{X}_\alpha^{\text{nuc}} / A_\alpha)} + \mathcal{N}_A \quad (73)$$

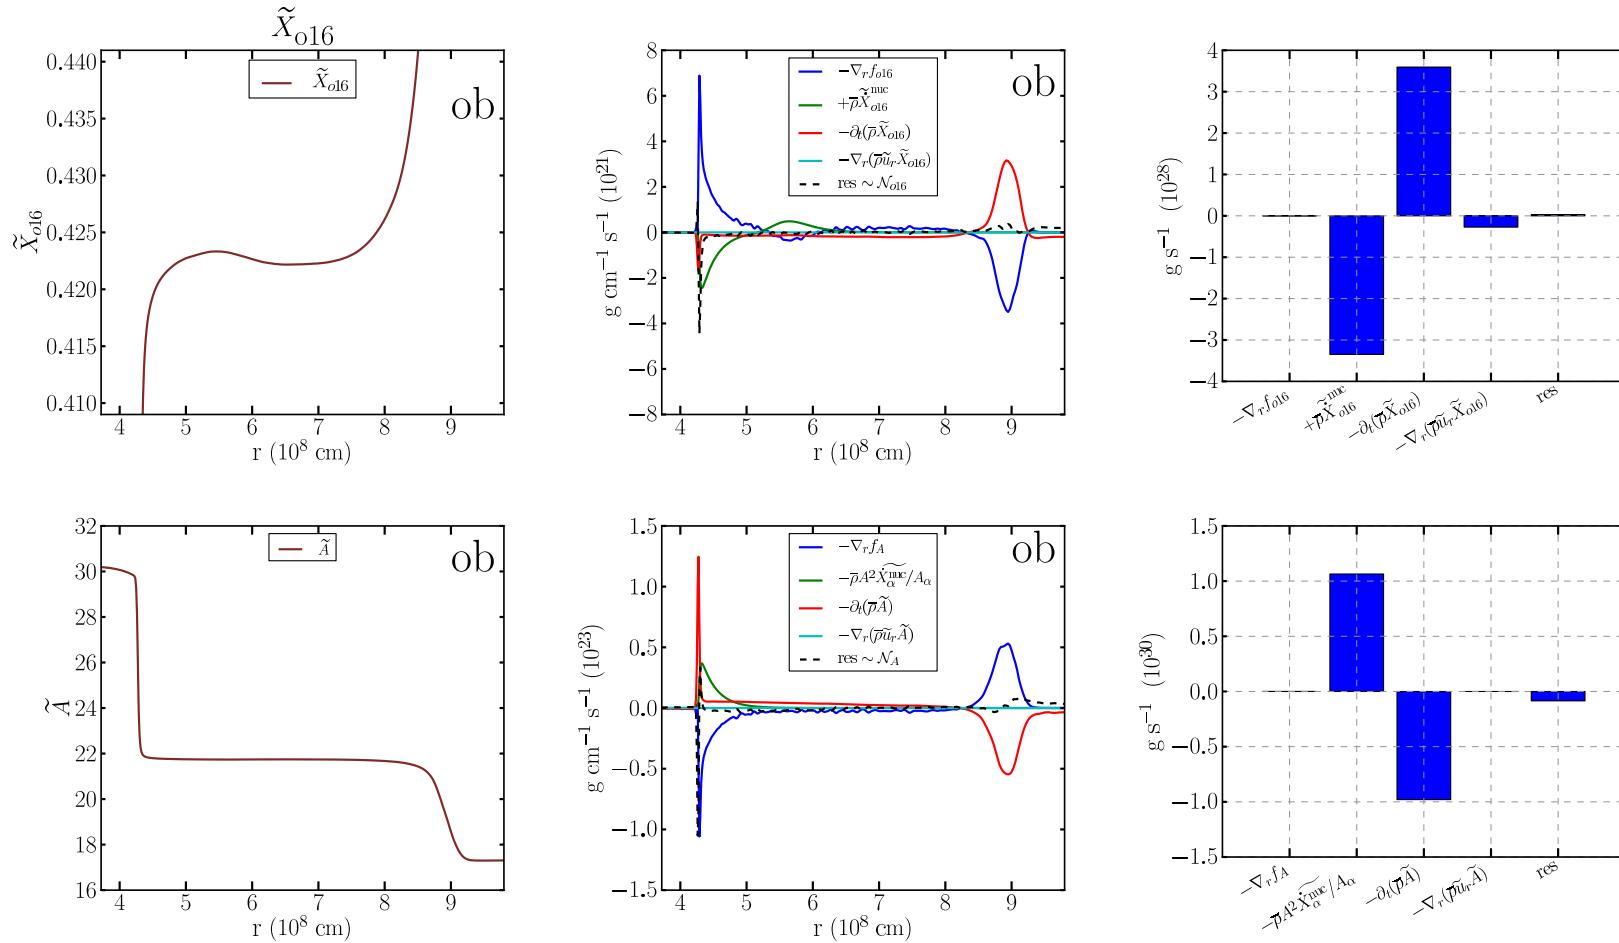

Figure 14: Mean composition equation for O^{16} and equation for mean number of nucleons per isotope. Model **ob.3D.2hp**.

4.13 Mean turbulent kinetic energy equation

$$\bar{\rho} \tilde{D}_t \tilde{k} = -\nabla_r(f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \mathcal{N}_k \quad (74)$$

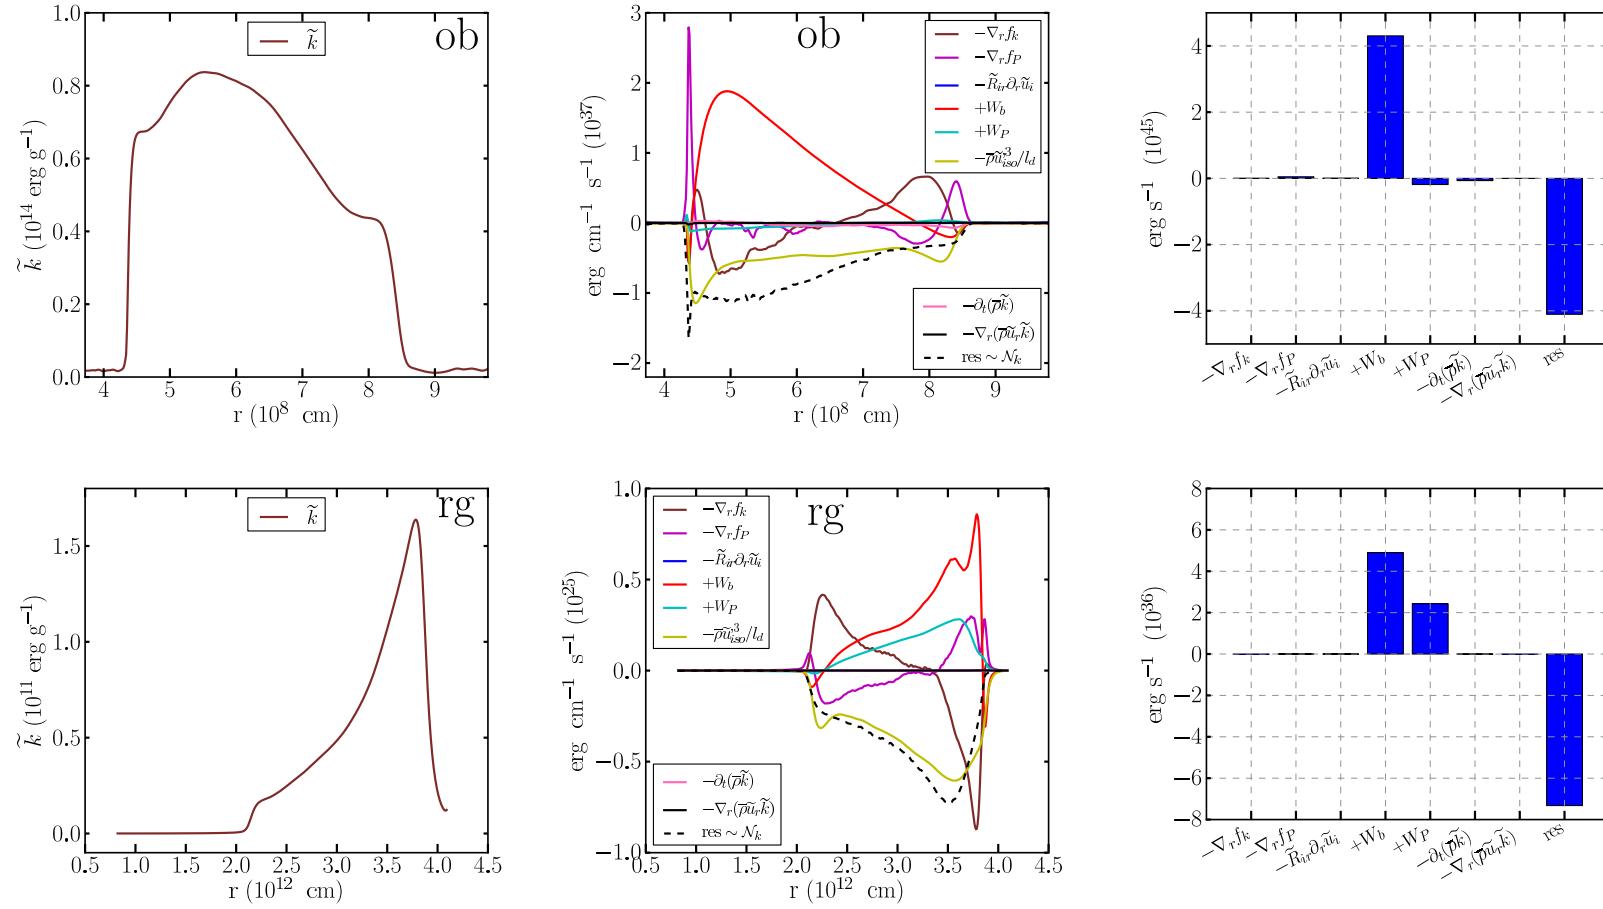

Figure 15: Turbulent kinetic energy equation. Model `ob.3D.mr` (upper panels) and model `rg.3D.mr` (lower panels).

4.14 Mean turbulent kinetic energy equation (radial part)

$$\bar{\rho} \tilde{D}_t \tilde{k}^r = -\nabla_r(f_k^r + f_P) - \tilde{R}_{rr} \partial_r \tilde{u}_r + W_b + \overline{P' \nabla_r u''_r} + \mathcal{G}_k^r + \mathcal{N}_{kr} \quad (75)$$

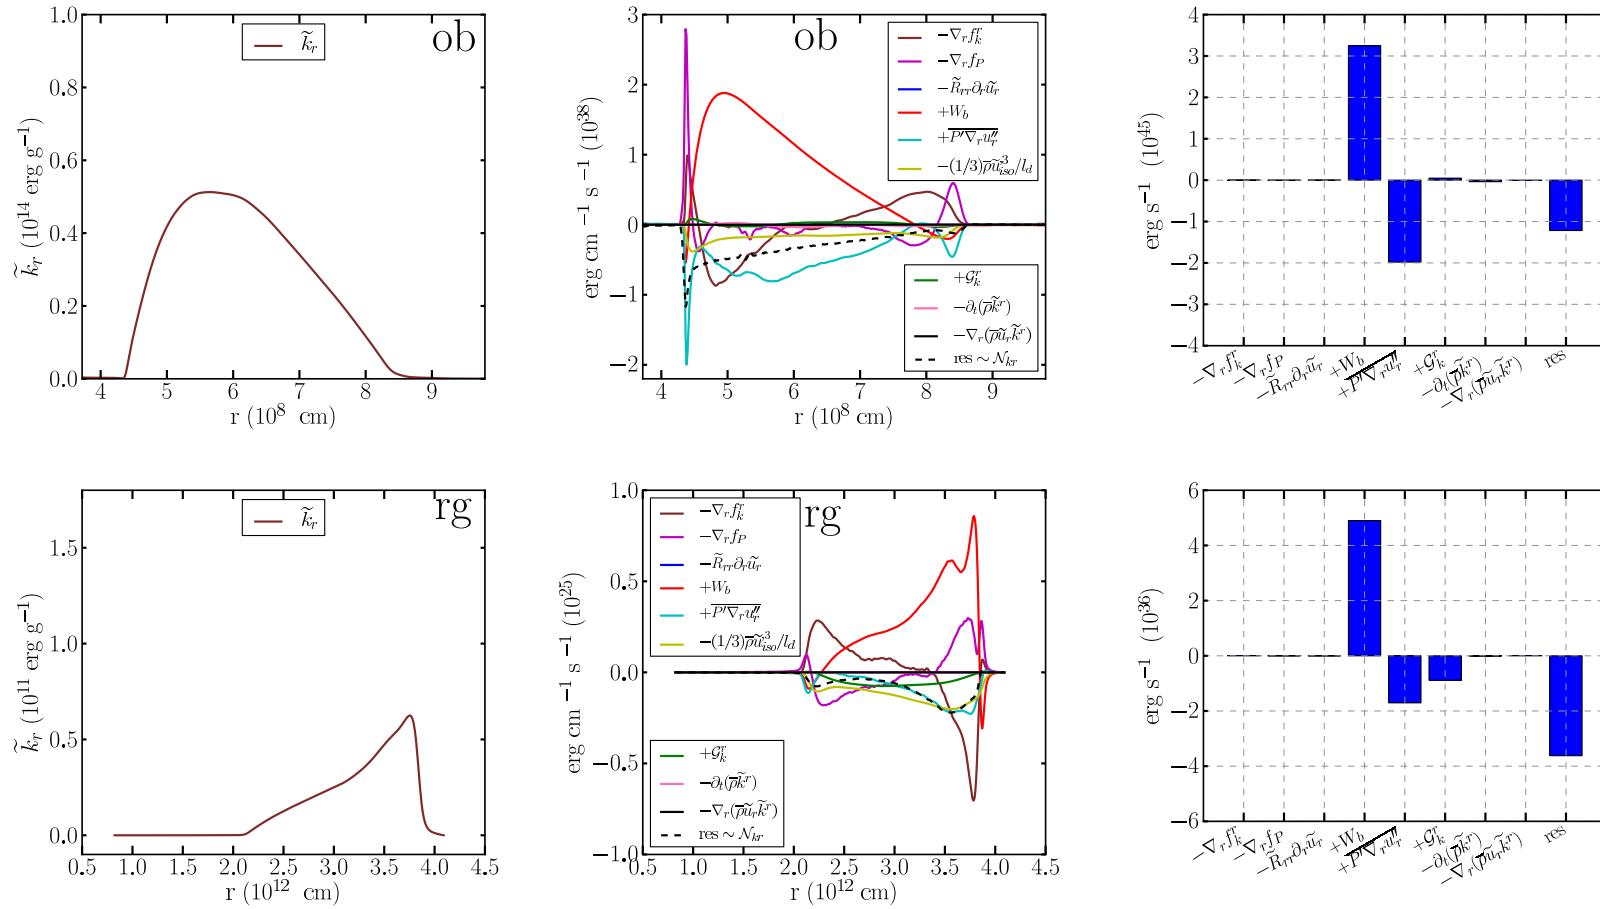

Figure 16: Turbulent radial kinetic energy equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.15 Mean turbulent kinetic energy equation (horizontal part)

$$\bar{\rho} \tilde{D}_t \tilde{k}^h = -\nabla_r f_k^h - (\tilde{R}_{\theta r} \partial_r \tilde{u}_\theta + \tilde{R}_{\phi r} \partial_r \tilde{u}_\phi) + (\overline{P' \nabla_\theta u'_\theta} + \overline{P' \nabla_\phi u'_\phi}) + \mathcal{G}_k^h + \mathcal{N}_{kh} \quad (76)$$

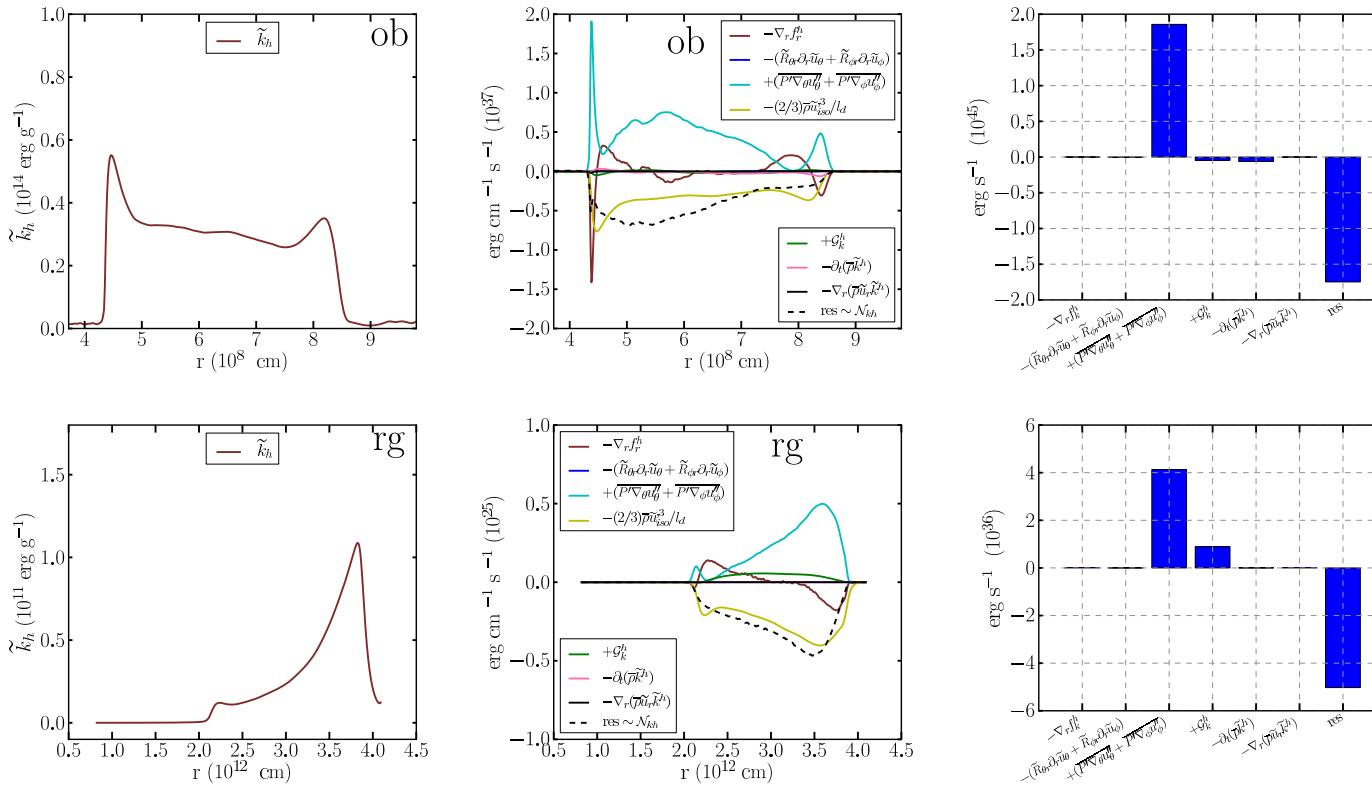

Figure 17: Turbulent horizontal kinetic energy equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.16 Mean turbulent mass flux equation

$$\bar{\rho} \tilde{D}_t \bar{u}_r'' = -(\bar{\rho}' u_r' u_r' / \bar{\rho}) \partial_r \bar{\rho} + (\tilde{R}_{rr} / \bar{\rho}) / \partial_r \bar{\rho} - \bar{\rho} \nabla_r (\bar{u}_r'' \bar{u}_r'') + \nabla_r \bar{\rho}' u_r' u_r' - \bar{\rho} u_r'' \nabla_r \bar{u}_r + \bar{\rho} u_r' d'' - b \partial_r \bar{P} + \bar{\rho}' v \partial_r \bar{P}' + \mathcal{G}_a + \mathcal{N}_a \quad (77)$$

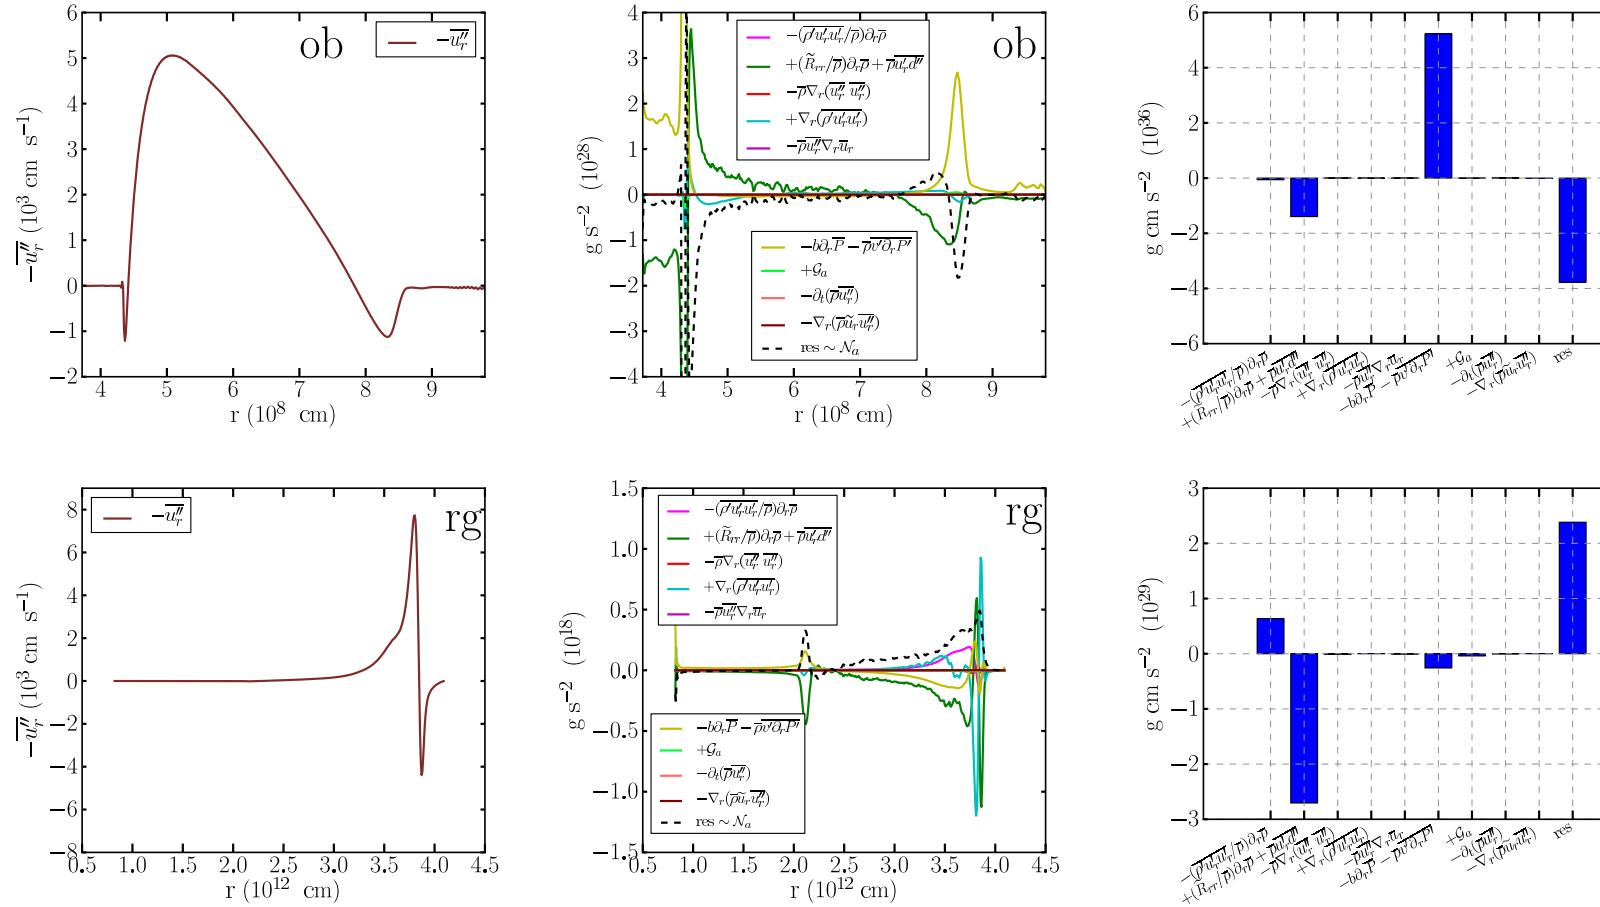

Figure 18: Turbulent mass flux equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.17 Mean density-specific volume covariance equation

$$\bar{D}_t b = +\bar{v} \nabla_r \bar{\rho} \bar{u}_r'' - \bar{\rho} \nabla_r (\bar{u}_r' \bar{v}') + 2\bar{\rho} \bar{v}' \bar{d}' + \mathcal{N}_b \quad (78)$$

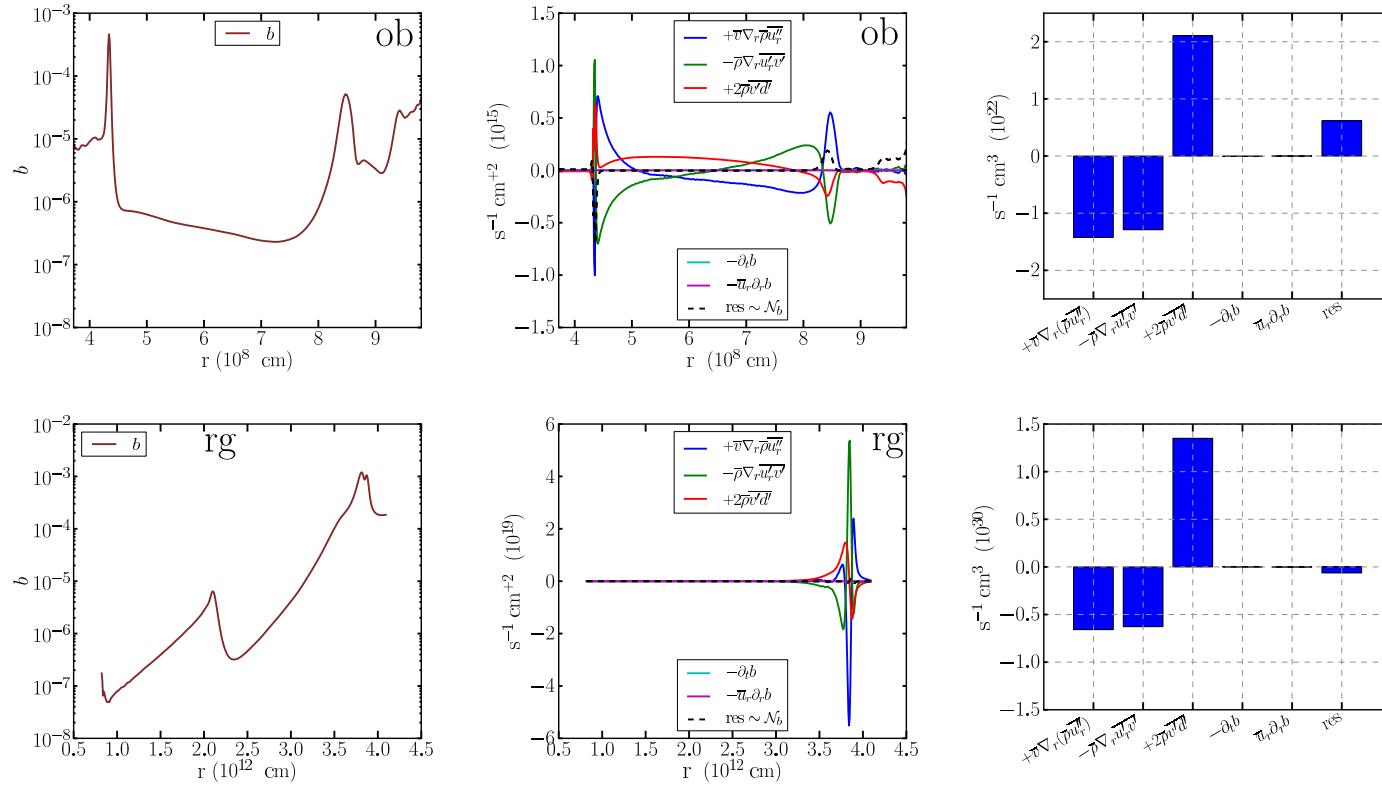

Figure 19: Density-specific volume covariance equation. Model ob.3D.mr (upper panels) and model rg.3D.mr (lower panels).

4.18 Mean internal energy flux equation

$$\bar{\rho} \tilde{D}_t(f_I/\bar{\rho}) = \mathcal{N}_{fI} - \nabla_r f_I^r - f_I \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{\epsilon}_I - \overline{\epsilon_I''} \partial_r \overline{P} - \overline{\epsilon_I''} \partial_r \overline{P'} - \overline{u_r''} (Pd) + \overline{u_r''} (\mathcal{S} + \nabla \cdot f_T) + \mathcal{G}_I + \mathcal{N}_{fI} \quad (79)$$

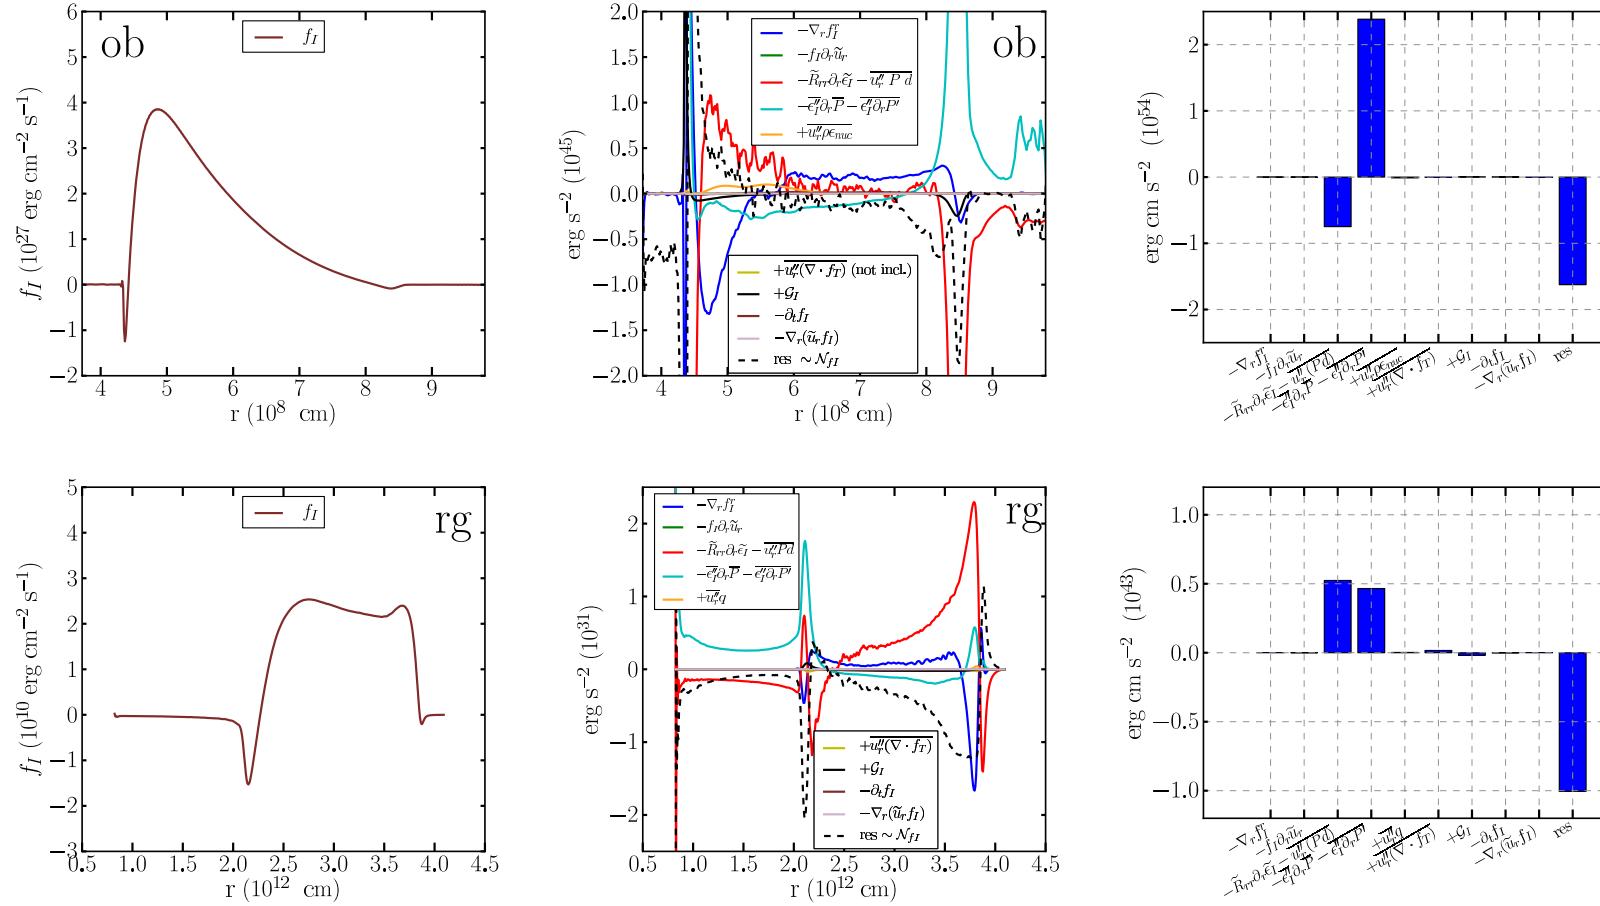

Figure 20: Mean internal energy flux equation. Model **ob.3D.mr** (upper panels) and model **rg.3D.mr** (lower panels).

4.19 Mean entropy flux equation

$$\bar{\rho} \tilde{D}_t(f_s/\bar{\rho}) = -\nabla_r f_s^r - f_s \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{s} - \bar{s}'' \partial_r \bar{P} - \bar{s}'' \partial_r \bar{P}' + \bar{u}_r'' (\mathcal{S} + \nabla \cdot \mathbf{F}_T) / \bar{T} + \mathcal{G}_s + \mathcal{N}_{fs} \quad (80)$$

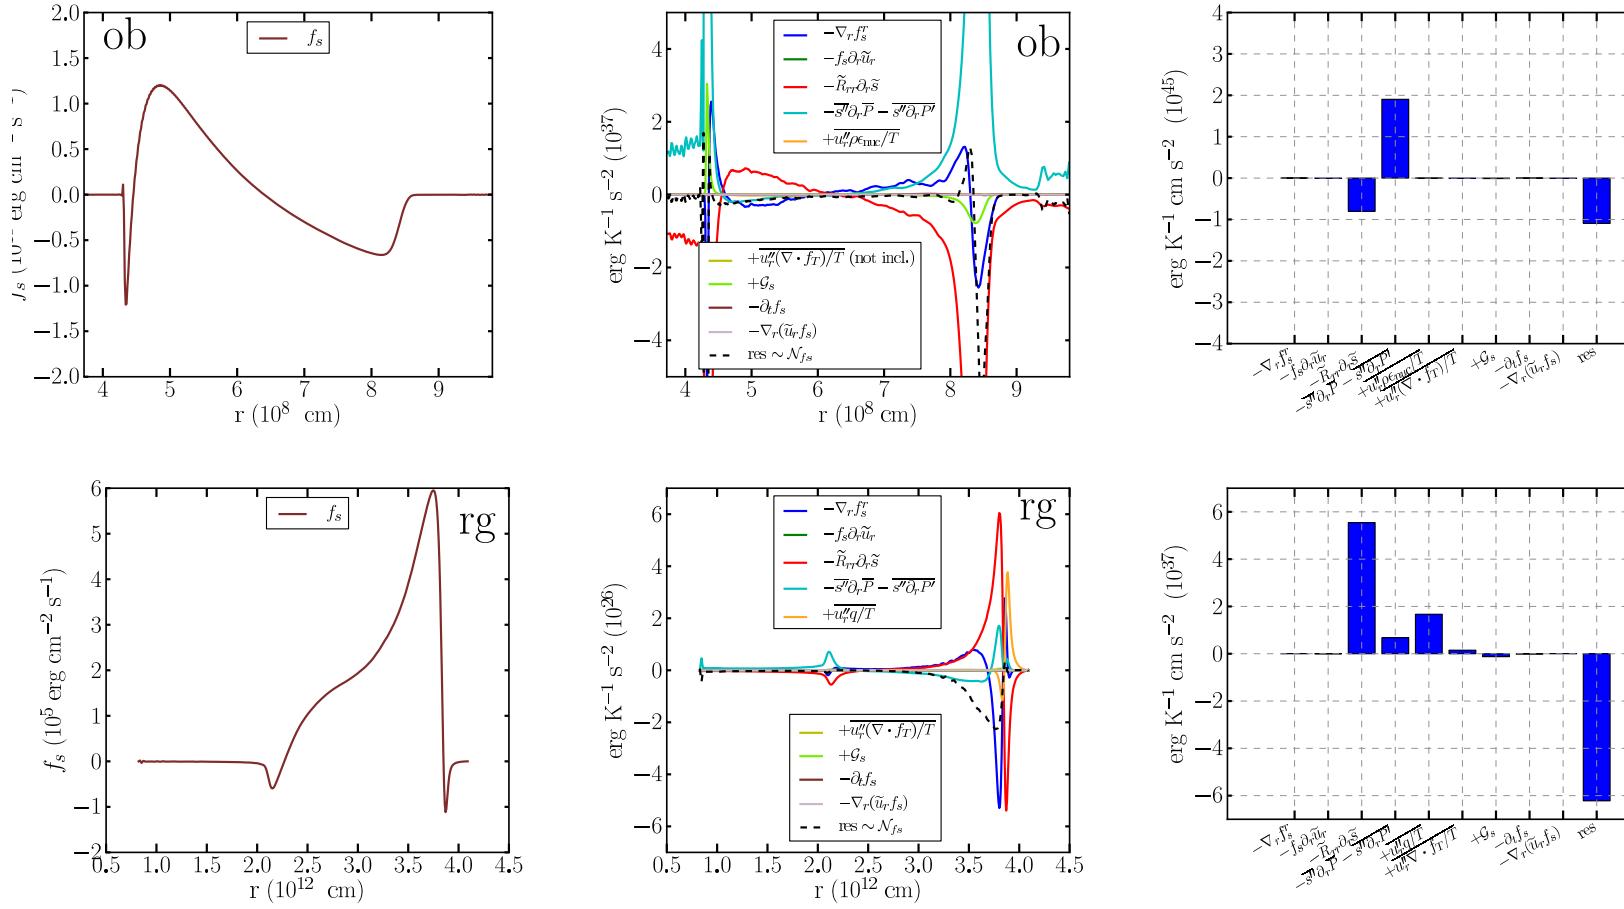

Figure 21: Mean entropy flux equation. Model ob.3D.2hp (upper panels) and model rg.3D.mr (lower panels).

4.20 Mean composition flux equation and mean A and Z flux equations

$$\bar{\rho} \tilde{D}_t(f_\alpha/\bar{\rho}) = -\nabla_r f_\alpha^r - f_\alpha \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_\alpha - \overline{X''_\alpha \partial_r \bar{P}} - \overline{X''_\alpha \partial_r \bar{P'}} + \overline{u''_r \rho \dot{X}_\alpha^{\text{nuc}}} + \mathcal{G}_\alpha + \mathcal{N}_{f_\alpha} \quad (81)$$

$$\bar{\rho} \tilde{D}_t(f_A/\bar{\rho}) = \mathcal{N}_{fA} - \nabla_r f_A^r - f_A \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{A} - \overline{A'' \partial_r \bar{P}} - \overline{A'' \partial_r \bar{P'}} - \overline{u''_r \rho A^2 \Sigma_\alpha \dot{X}_\alpha^{\text{nuc}} / A_\alpha} + \mathcal{G}_A \quad (82)$$

$$\begin{aligned} \bar{\rho} \tilde{D}_t(f_Z/\bar{\rho}) = & \mathcal{N}_{fZ} - \nabla_r f_Z^r - f_Z \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{Z} - \overline{Z'' \partial_r \bar{P}} - \overline{Z'' \partial_r \bar{P'}} - u''_r \rho Z A \Sigma_\alpha (\dot{X}_\alpha^{\text{nuc}} / A_\alpha) - \\ & - u''_r \rho A \Sigma_\alpha (Z_\alpha \dot{X}_\alpha^{\text{nuc}} / A_\alpha) + \mathcal{G}_Z \end{aligned} \quad (83)$$

11 Analysis of some turbulence one-point closure models

11.1 Downgradient approximation theory background

$$\tilde{F}_i^q \sim -\Gamma_t \frac{\partial \tilde{q}}{\partial x_i} \quad (\Gamma_t \text{ is turbulence diffusivity and } \tilde{F}_i^q = \overline{\rho q'' u_i''} \text{ is a flux of } q)$$

- can be derived from a transport equation of a diffusive passive scalar (Harlow & Hirt, 1969; Daly & Harlow, 1970):

$$\partial_t \tilde{F}_i^q - \overline{u_i'' q'' \partial_t \rho} - \tilde{R}_{in} \partial_n \tilde{q} + \tilde{u}_n \overline{\rho \partial_n u_i'' q''} + \tilde{F}_n^q \partial_n \tilde{u}_i + \partial_n \overline{\rho u_n'' u_i'' q''} - \overline{u_i'' q'' \partial_n \rho u_n''} = -\overline{q'' \partial_i P} - \overline{q'' \partial_i P'} + \partial_n (\overline{\lambda \rho u_i'' \partial_n q''}) + f \tilde{F}_i^q$$

where q is the passive scalar governed by a diffusion equation $D_t q = \lambda \nabla^2 q$.

It implies, that the downgradient approximation holds only for:

- a transport of a diffusive passive scalar
- a flow in steady state ($\partial_t \tilde{F}_i^q = 0$)
- an incompressible flow ($\partial_t \rho = 0$)
- a flow with no background velocities ($\tilde{u}_i = 0$)
- a flow with no pressure-scalar correlations ($\overline{q'' \partial_i P} = \overline{q'' \partial_i P'} = 0$)
- a homogeneous flow ($\partial_n \overline{\rho u_n'' u_i'' q''} = 0$)
- an isotropic flow (decay-rate assumption: $\overline{\partial_n q'' \partial_n \rho u_i''} \sim f \tilde{F}_i^q$)

But, stellar turbulent convection is:

- stratified (not homogeneous)
- anisotropic
- compressible on expanding/contracting background

– **downgradient approximation is not suitable for modelling stellar processes**

11.2 Downgradient approximations

$$f_k = (C \rho \sqrt{\tilde{k}} l_d) \partial_r \tilde{k} \quad f_I = (C \rho \sqrt{\tilde{k}} l_d) \partial_r \tilde{\epsilon}_I \quad f_I = (C \rho \tilde{k}^2 / \varepsilon_k) \partial_r \tilde{\epsilon}_I \quad (84)$$

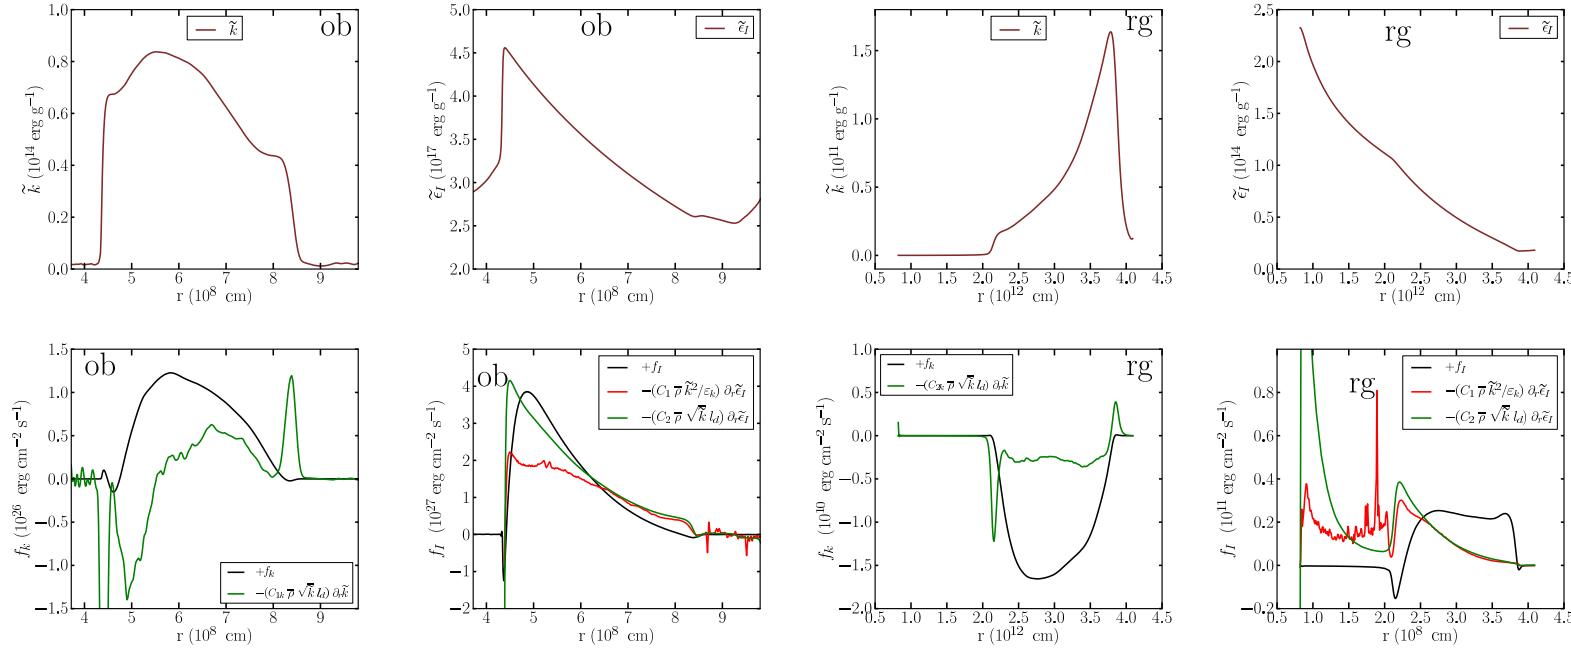

Figure 81: Profiles of mean turbulent kinetic energy and mean internal energy (upper panels) and various downgradient approximations to turbulent kinetic energy flux and internal energy flux (lower panels) derived from oxygen burning shell model ob.3D.mr (ob) and red giant envelope convection rg.3D.mr (rg). l_d is dissipation length scale and C is model constant.

11.3 Various approximations taken from Besnard-Harlow-Rauenzahn (BHR) model

$$\overline{\rho' u'_r u'_r} = C_{1a} \frac{l_d}{\sqrt{k}} \tilde{R}_{rr} \partial_r \overline{u''_r} \quad \overline{v' \partial_r P'} = -C_{2a} \frac{\sqrt{k}}{l_d} \overline{u''_r} \quad \overline{v' u'_r} = -C_{1b} \frac{l_d}{\sqrt{k}} \frac{\tilde{R}_{rr}}{\bar{\rho}} \frac{\partial}{\partial r} \left(\frac{1+b}{\bar{\rho}} \right) \quad \overline{v' d'} = -C_{2b} \frac{\sqrt{k}}{l_d} \frac{b}{\bar{\rho}}$$

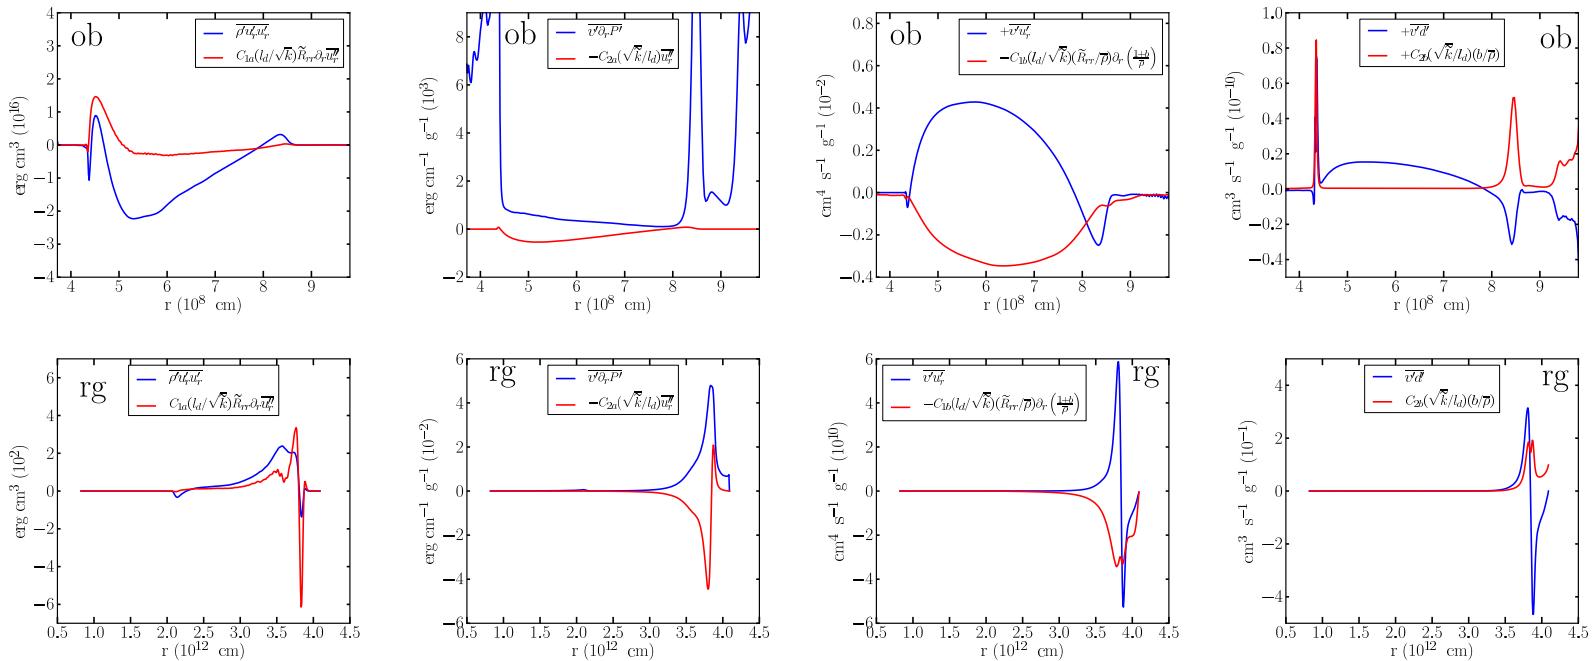

Figure 82: Various approximations taken from Besnard-Harlow-Rauenzahn (BHR) model derived from oxygen burning shell model ob.3D.mr (ob) and red giant envelope convection rg.3D.mr (rg). l_d is dissipation length scale and C is model constant.

11.4 Quasi-normal approximation and decay-rate assumption model

$$\begin{aligned} \overline{a'b'c'd'} &= \overline{a'b'} \overline{c'd'} + \overline{a'c'} \overline{b'd'} + \overline{a'd'} \overline{b'c'} \\ a''\widetilde{b''c''d''} &= \widetilde{a''b''} \widetilde{c''d''} + \widetilde{a''c''} \widetilde{b''d''} + \widetilde{a''d''} \widetilde{b''c''} \end{aligned}$$

$$\overline{a'b'} = (l_d^2/\Delta) \overline{\partial_k a' \partial_k b'} \quad (\text{original formulations}) \quad (85)$$

$$\widetilde{a''b''} = (l_d^2/\Delta) \overline{\partial_k a'' \partial_k b''} \quad (\text{assumed Favre equivalents}) \quad (86)$$

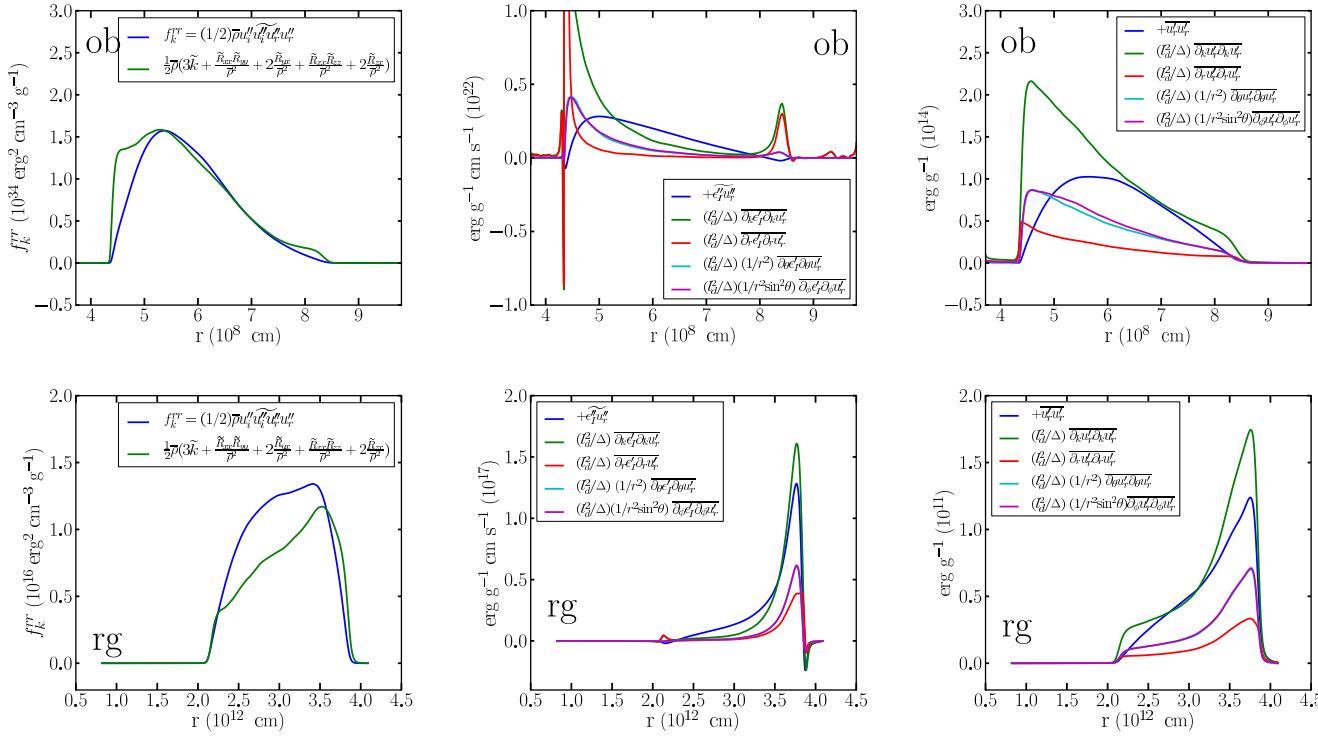

Figure 83: Quasi-normal approximations (left panels) and decay-rate assumption models (middle, right panels) derived from oxygen burning shell model ob.3D.mr (ob) and red giant envelope convection rg.3D.mr (rg).

11.5 Integral models

$$f_I = \int (\epsilon_{\text{nuc}} + \varepsilon_k/\bar{\rho} - \bar{P} \bar{d}/\bar{\rho} - W_P/\bar{\rho} - T \dot{\bar{s}}) dr \quad f_k = \int (-(f_I(\Gamma_3 - 1) - f_P)) / ((\Gamma_3 - \Gamma_1 - 1) H_P) - \varepsilon_k - \nabla_r f_P + W_P dr$$

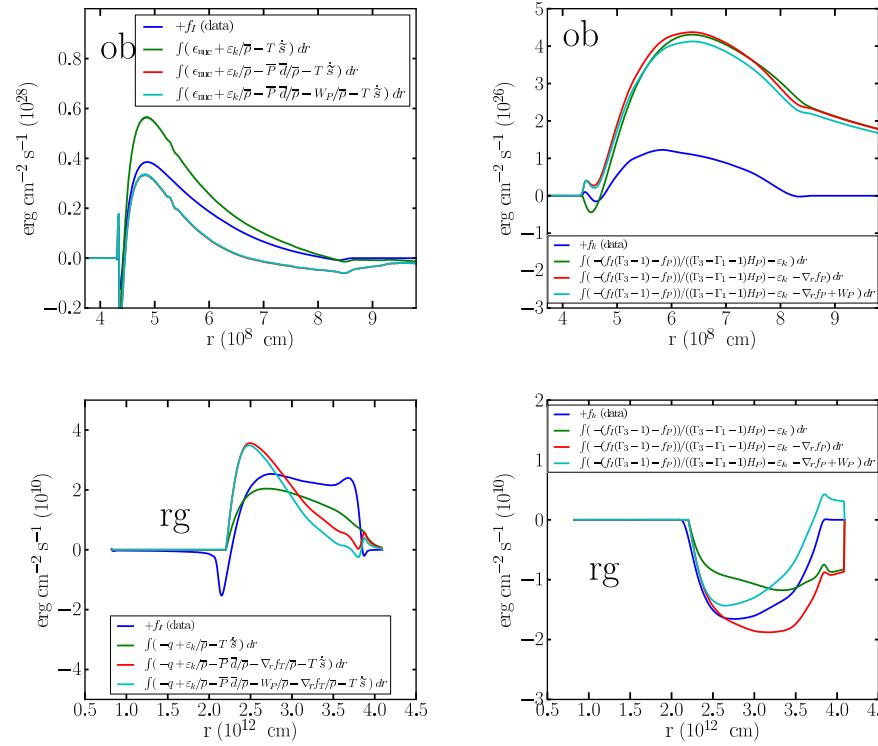

Figure 84: Integral models for internal energy flux f_I (left) and turbulent kinetic energy flux (right) derived from oxygen burning shell model ob.3D.mr (ob) and red giant envelope convection rg.3D.mr (rg).

12 Fourier scale analysis

We perform scale analysis on fluctuation correlations containing two constituents by using Fourier analysis and taking advantage of Parceval's theorem. If $a''(r, \theta, \phi)\delta(r')$ and $b''(r, \theta, \phi)\delta(r')$ are real-valued functions (in our case fluctuations in a two dimensional plane at radius r') and their Fourier transforms are $\widehat{a''}$ and $\widehat{b''}$ then “energy” contribution from large and small scales to horizontally averaged correlation $a''b''$ can be calculated as:

$$\begin{aligned} E(k) &= \frac{1}{\Delta\Omega} \int_{\Omega} a''b'' d\Omega = \int_k \widehat{a''}(k) \widehat{b''}^*(k) dk = \\ &= \underbrace{\int_{k \leq k_T} \widehat{a''}(k) \widehat{b''}^*(k) dk}_{\text{large scales}} + \underbrace{\int_{k > k_T} \widehat{a''}(k) \widehat{b''}^*(k) dk}_{\text{small scales}} \end{aligned} \quad (87)$$

where this integral is evaluated by summing the integrand over spherical shells of constant radius $k = \sqrt{(k_\theta^2 + k_\phi^2)}$ and unit wavenumber. k_T is a threshold wave number which separates large and small scales. Ω is our two-dimensional cut domain.

The angular size of a structure in a horizontal plane can be at a given radius and wave number k expressed as $l \sim N/k$, where N is the angular size of simulated wedge. It means that in a 45° wedge simulation will structures at wave number $k = 10$ have approximately size 4.5° .

For a separation of contribution from large and small scales to a given correlation field, we choose a length scale equivalent to $1 H_P$. This number is close to average vertical correlation length scales for u'_r, ρ', P' in middle of convection zones calculated by [Viallet et al. \[2013\]](#). It is about 1.5×10^8 cm in the $2 H_P$ oxygen burning models and 3×10^{11} cm in $7 H_P$ red giant models. Corresponding separation wave numbers k_T are 4 for the oxygen case and 11 for the red giant case. These separation scales should be considered as a lower limit for a size of actual large scales, as we know that they are elongated in radial direction [[Meakin and Arnett, 2007](#)]. Here, we Fourier transform our data in two dimensional horizontal planes and essentially looking only at horizontal scales.

We present our scale analysis in a form of the cumulative Fourier spectra, which are calculated according the formula:

$$\overline{E}_c(k) = \sum_{i \leq k} \overline{E(i)/E_t} \quad (88)$$

where i is a wave number and $E(i)$ defined by Eq. 87. E_t is total energy of a correlation field or in other words a horizontally averaged value of the correlation field. The over bar represent time averaging of instantaneous values. Such a spectrum shows how big energy contribution to a field comes from first k Fourier modes.

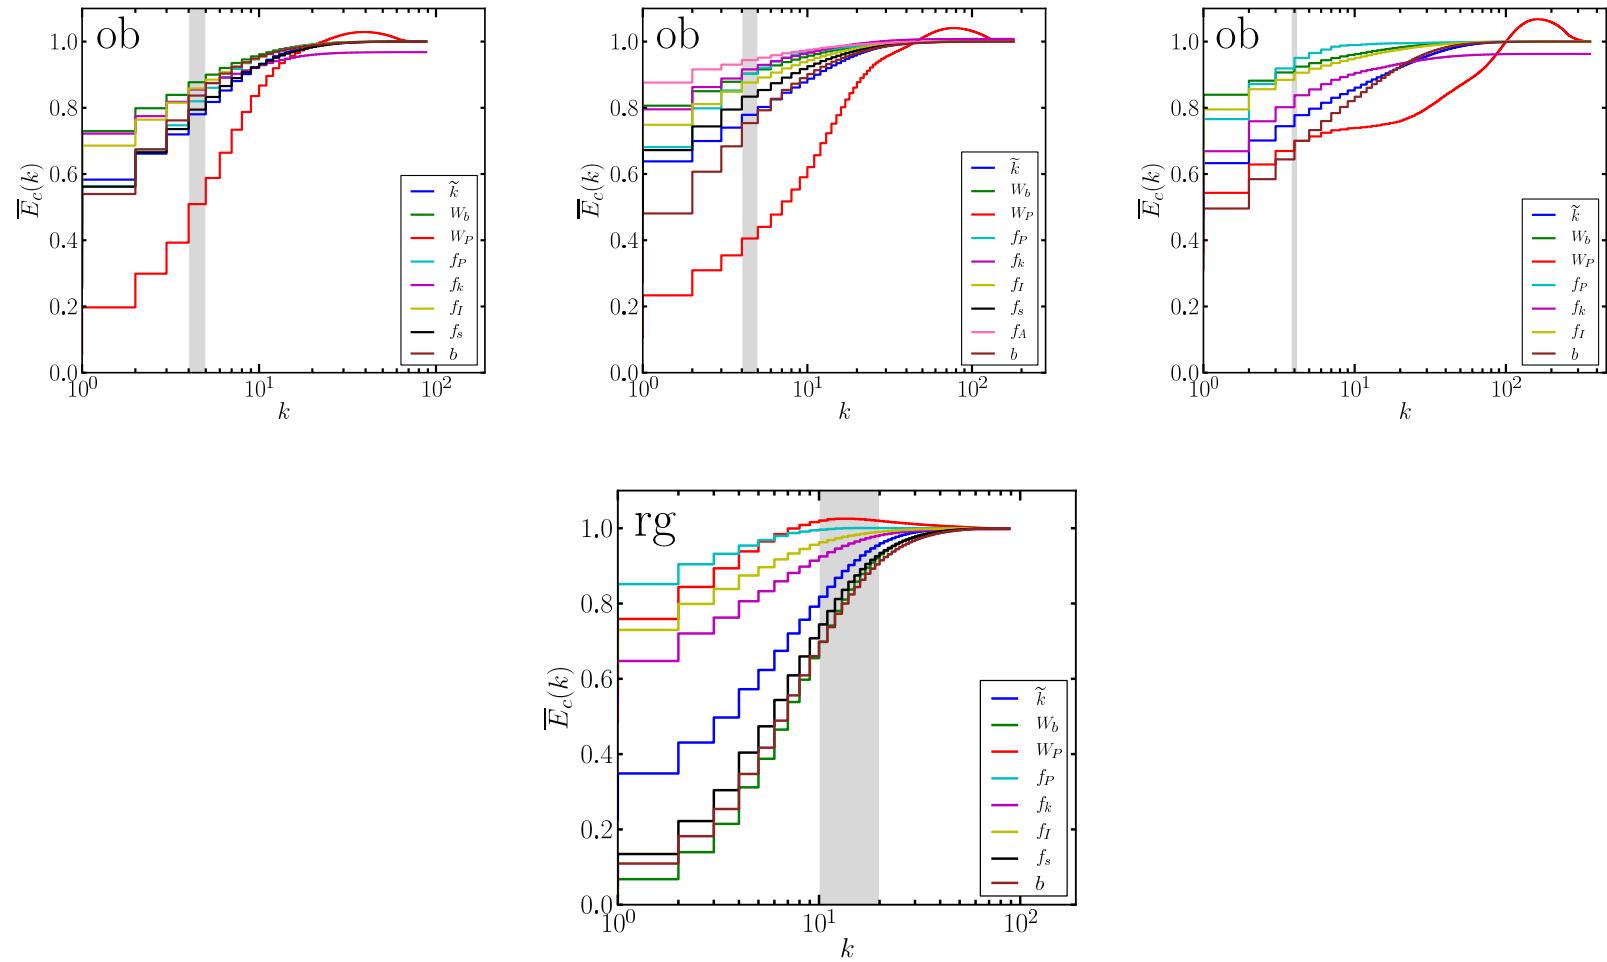

Figure 85: Cumulative Fourier spectra of relevant mean fields derived from oxygen burning shell models (upper panels) ob.3D.lr (left), ob.3D.mr (middle) and ob.3D.hr (right) derived at radius where corresponding mean field has a maximum value. The same is done for red giant convection model (lower panel) rg.3D.lr. The shaded vertical lines separates cumulative contributions from large and small scales.

13 Properties of our hydrogen injection flash and core helium flash data

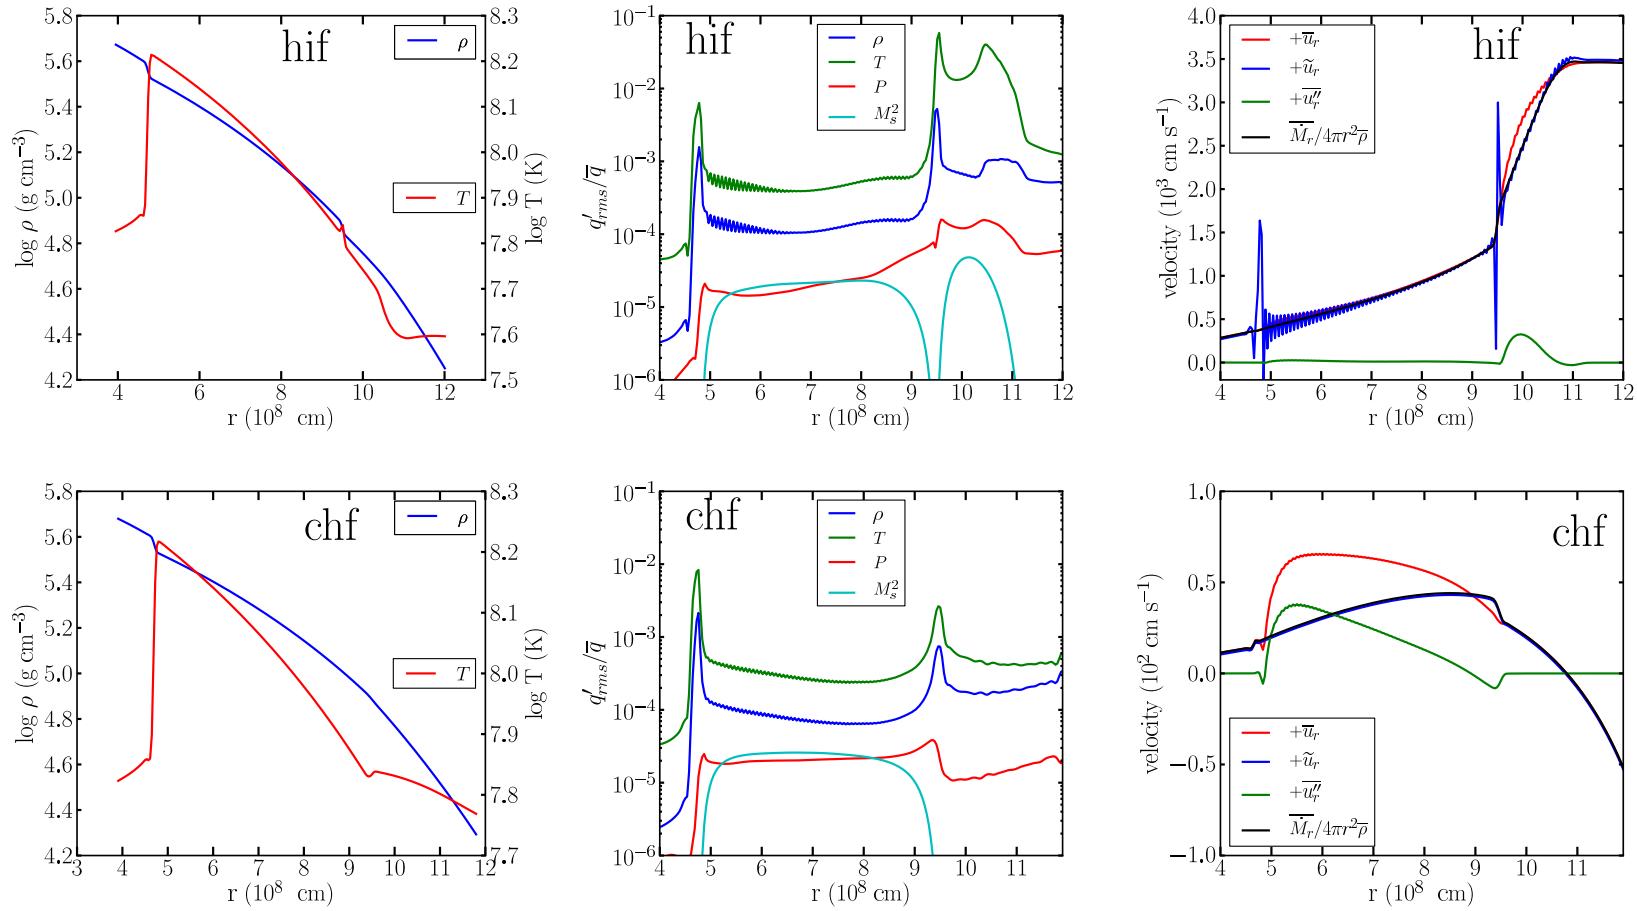

Figure 86: Properties of our data. Model hif.3D (upper panels) and model chf.3D (lower panels).

13.1 Snapshots of turbulent kinetic energy in a meridional plane

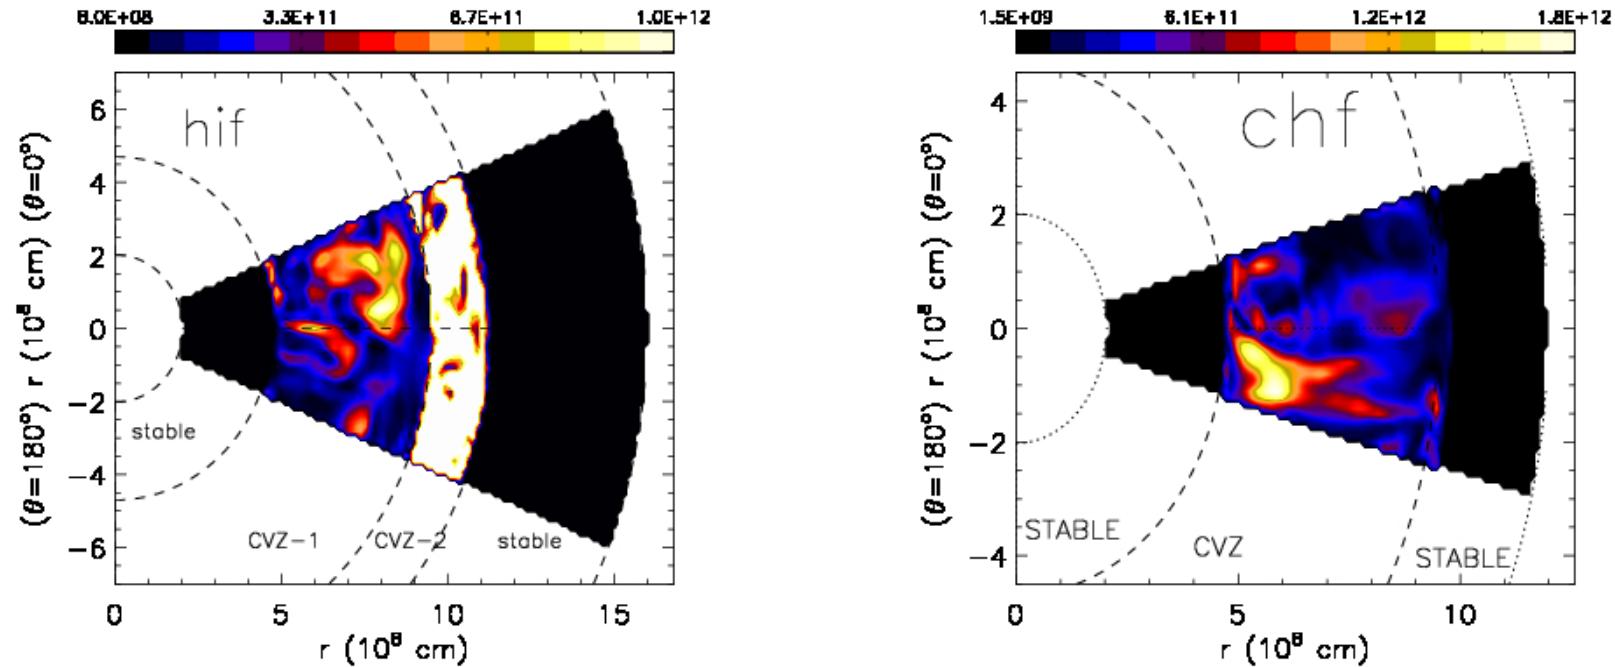

Figure 87: Snapshots of turbulent kinetic energy (in erg g^{-1}) in a meridional plane.

13.2 Summary of the hydrogen injection flash and core helium flash simulations and their properties

| Parameter | hif.3D | hif.3D | chf.3D |
|--|--------------------|---------------------|-------------------|
| Grid zoning | 375×45^2 | 375×45^2 | 270×30^2 |
| $r_{\text{in}}, r_{\text{out}}$ (10^8 cm) | 2., 16. | 2., 16. | 2., 12. |
| $\Delta\theta, \Delta\phi$ | 45° | | 30° |
| Convection zone | He-burning (CVZ-1) | CNO-burning (CVZ-2) | He-burning (CVZ) |
| $r_{\text{in}}^c, r_{\text{out}}^c$ (10^8 cm) | 4.7, 9.55 | 9.55, 11.3 | 4.7, 9.4 |
| CZ stratification (H_p) | 2.4 | 1.3 | 2.3 |
| Δt_{av} (s) | 4000 | 4000 | 18000 |
| v_{rms} (10^5 cm/s) | 8.2 | 11.8 | 8.5 |
| τ_{conv} (s) | 1180 | 290 | 1100 |
| $P_{\text{turb}}/P_{\text{gas}}$ (10^{-5}) | 2.6 | 3.7 | 3.3 |
| L_{heat} (10^{43} erg/s) | 1.2 | 1.8 | 1.2 |
| L_d (10^{41} erg/s) | 5.3 | 6.1 | 6. |
| l_d (10^8 cm) | 5.6 | 2.9 | 4.8 |
| τ_d (s) | 337.4 | 123.6 | 281.9 |
| τ_{dr} (s) | 719.7 | 175.8 | 659.7 |
| τ_{dh} (s) | 211.2 | 116.1 | 142.5 |

Table 8: boundaries of computational domain $r_{\text{in}}, r_{\text{out}}$; boundaries of convection zone at bottom and top r_b^c, r_t^c ; angular size of computational domain $\Delta\theta, \Delta\phi$; depth of convection zone “CZ stratification” in pressure scale height H_P ; averaging timescale of mean fields analysis Δt_{av} ; global rms velocity v_{rms} ; convective turnover timescale τ_{conv} ; average ratio of turbulent ram pressure and gas pressure $p_{\text{turb}}/p_{\text{gas}}$; total luminosity of the hydrodynamic model L ; total rate of kinetic energy dissipation L_d ; dissipation length-scale l_d ; turbulent kinetic energy dissipation time-scale τ_d ; radial turbulent kinetic energy dissipation time-scale τ_{dr} ; horizontal turbulent kinetic energy dissipation time-scale τ_{dh} . The numerical values may vary in time up to 20% due to limited amount of data for averaging out the time dependence.

14 Profiles and integral budgets of mean fields equations

14.1 Mean continuity equation

$$\tilde{D}_t \bar{\rho} = -\bar{\rho} \tilde{d} + \mathcal{N}_\rho \quad (89)$$

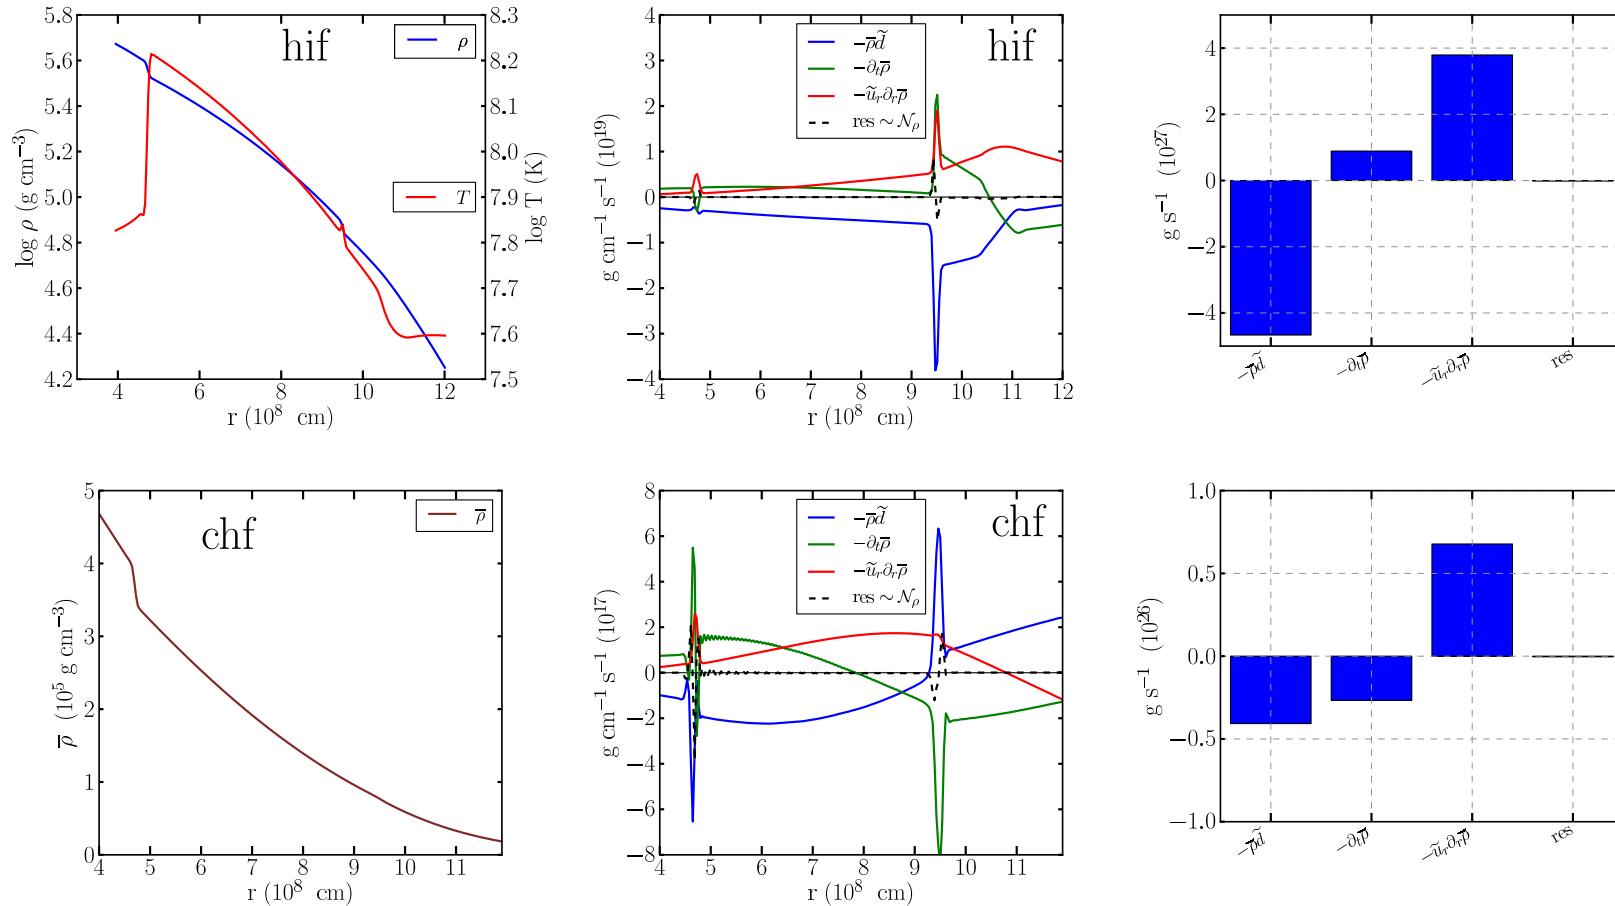

Figure 88: Mean continuity equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.2 Mean radial momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_r = -\nabla_r \tilde{R}_{rr} - \overline{G_r^M} - \partial_r \overline{P} + \bar{\rho} \tilde{g}_r + \mathcal{N}_{ur} \quad (90)$$

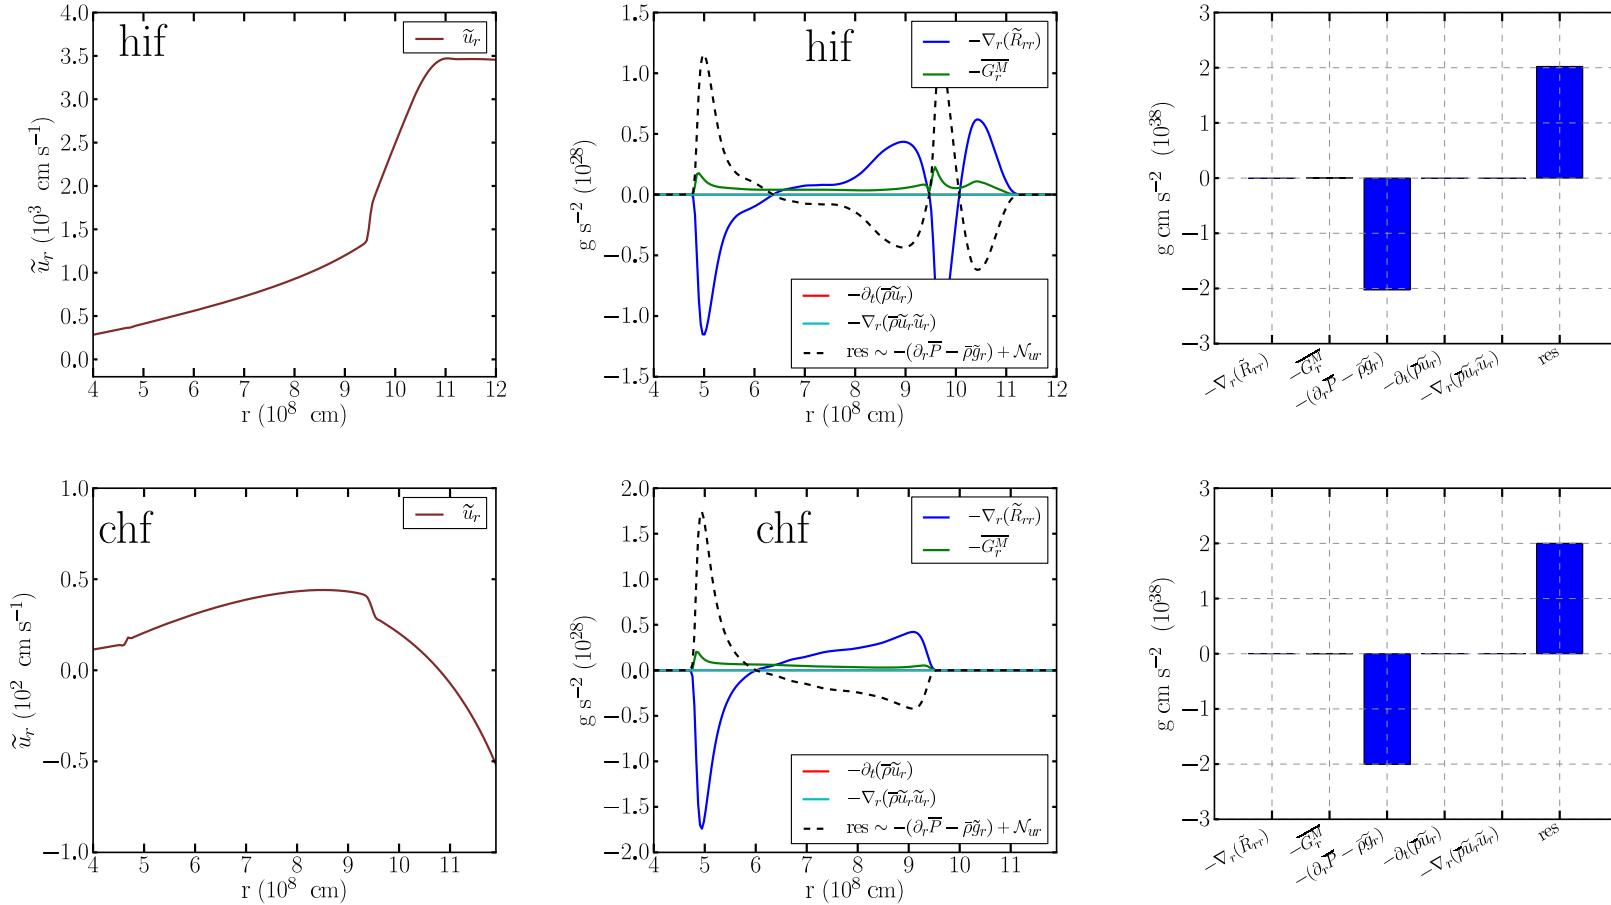

Figure 89: Mean radial momentum equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.3 Mean azimuthal momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_\theta = -\nabla_r \tilde{R}_{\theta r} - \overline{G_\theta^M} - (1/r) \overline{\partial_\theta P} + \mathcal{N}_{u\theta} \quad (91)$$

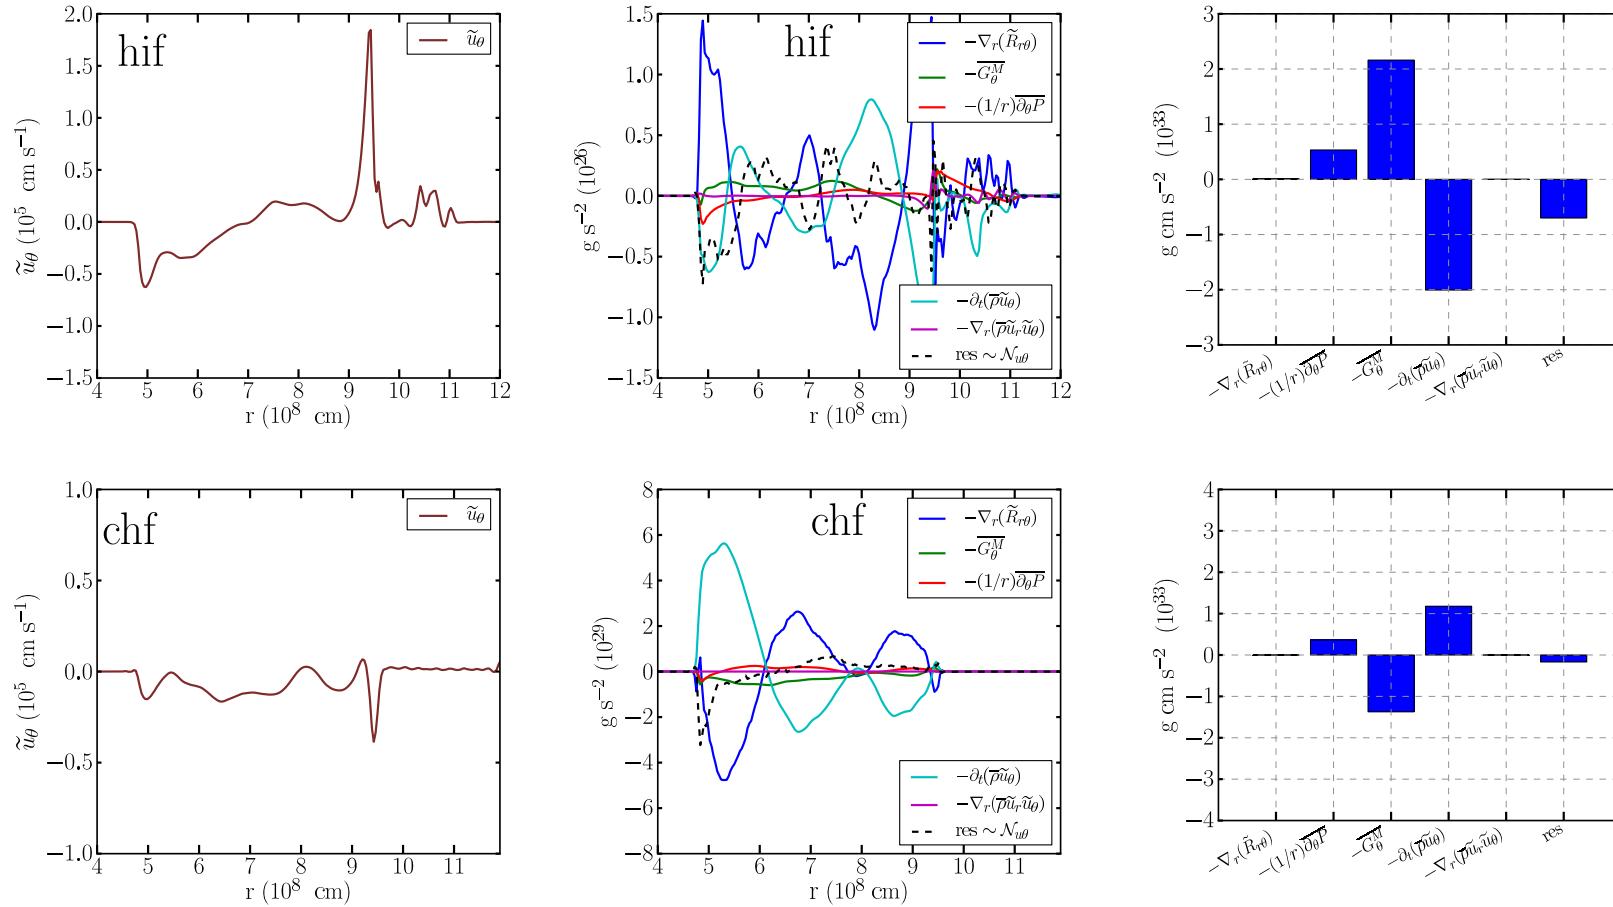

Figure 90: Mean azimuthal momentum equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.4 Mean polar momentum equation

$$\bar{\rho} \tilde{D}_t \tilde{u}_\phi = -\nabla_r \tilde{R}_{\phi r} - \overline{G_\phi^M} + \mathcal{N}_{u\phi} \quad (92)$$

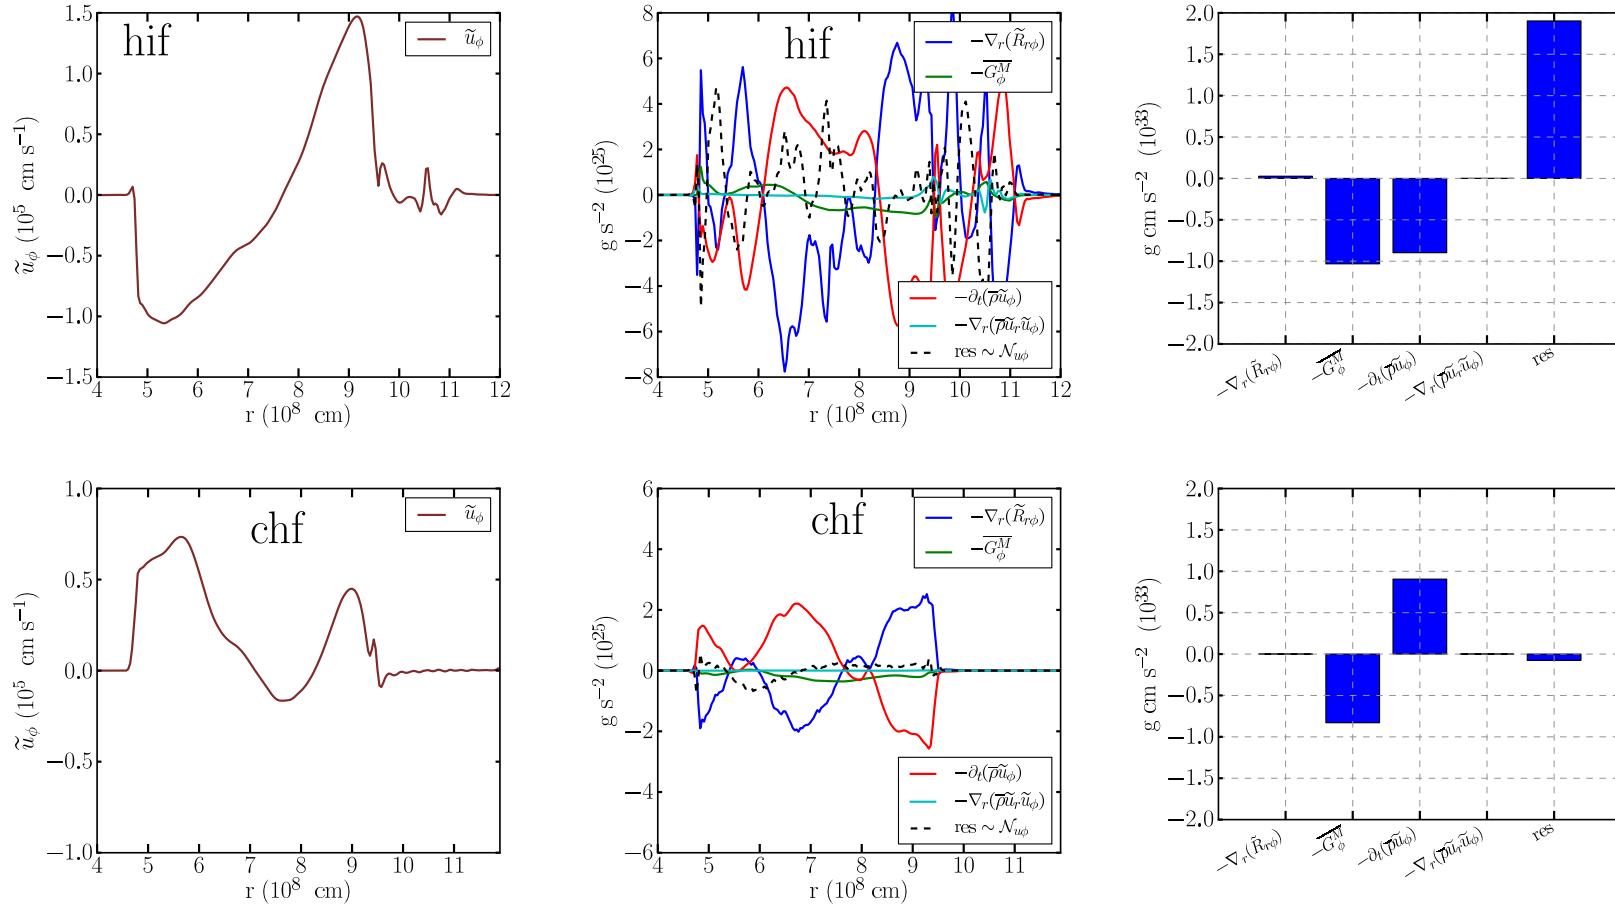

Figure 91: Mean polar momentum equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.5 Mean internal energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_I = -\nabla_r(f_I + f_T) - \bar{P} \bar{d} - W_P + S + \mathcal{N}_{\epsilon I} \quad (93)$$

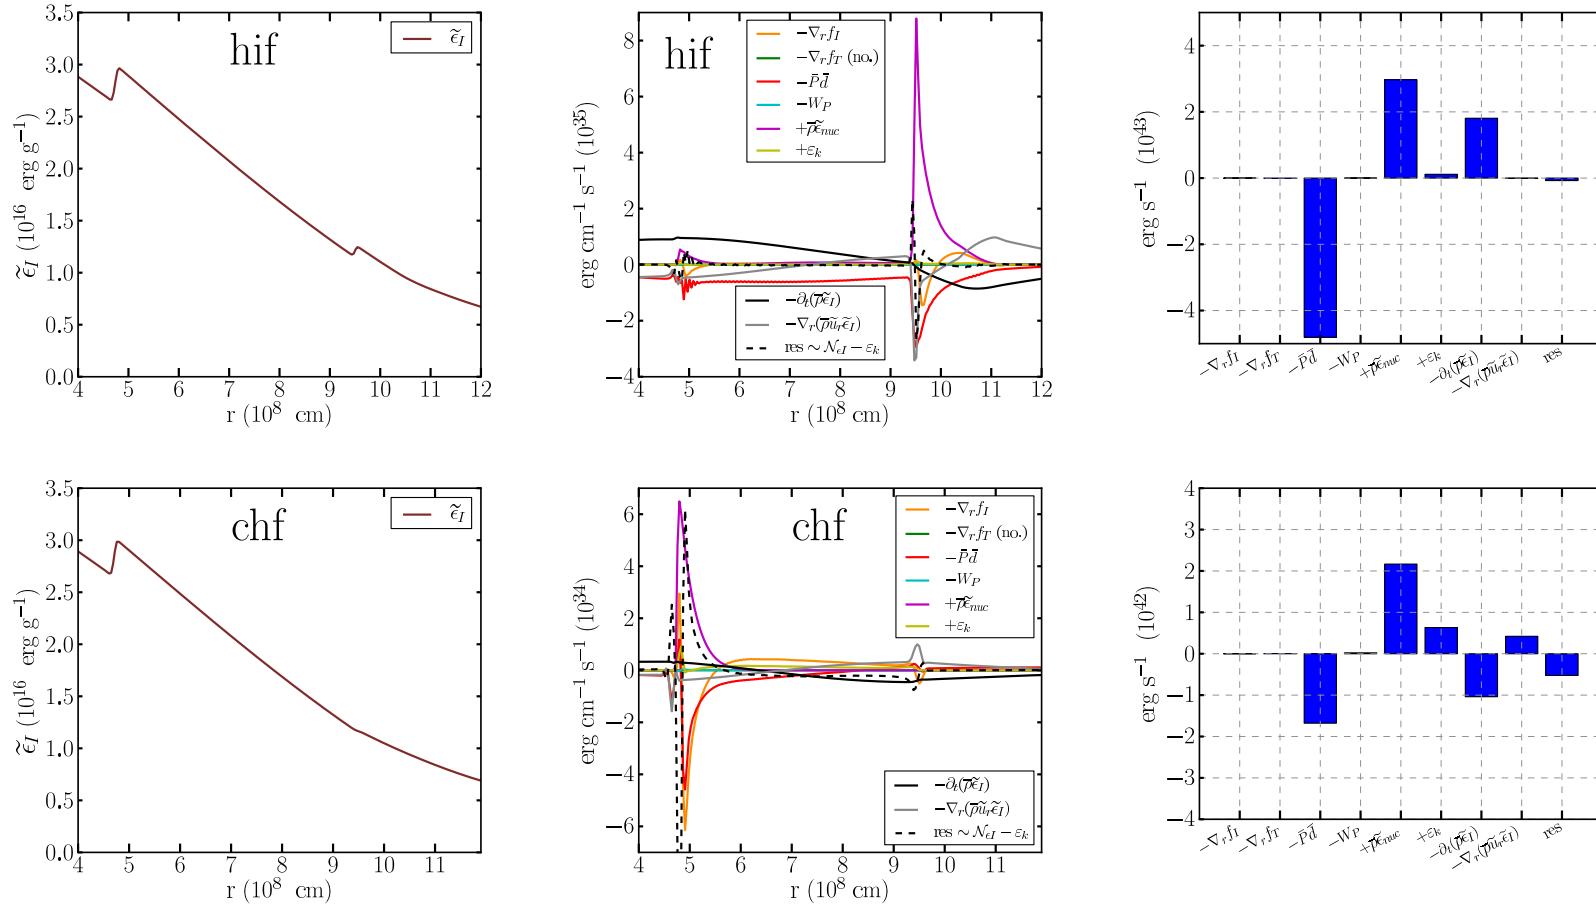

Figure 92: Mean internal energy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.6 Mean kinetic energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_k = -\nabla_r(f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{ek} \quad (94)$$

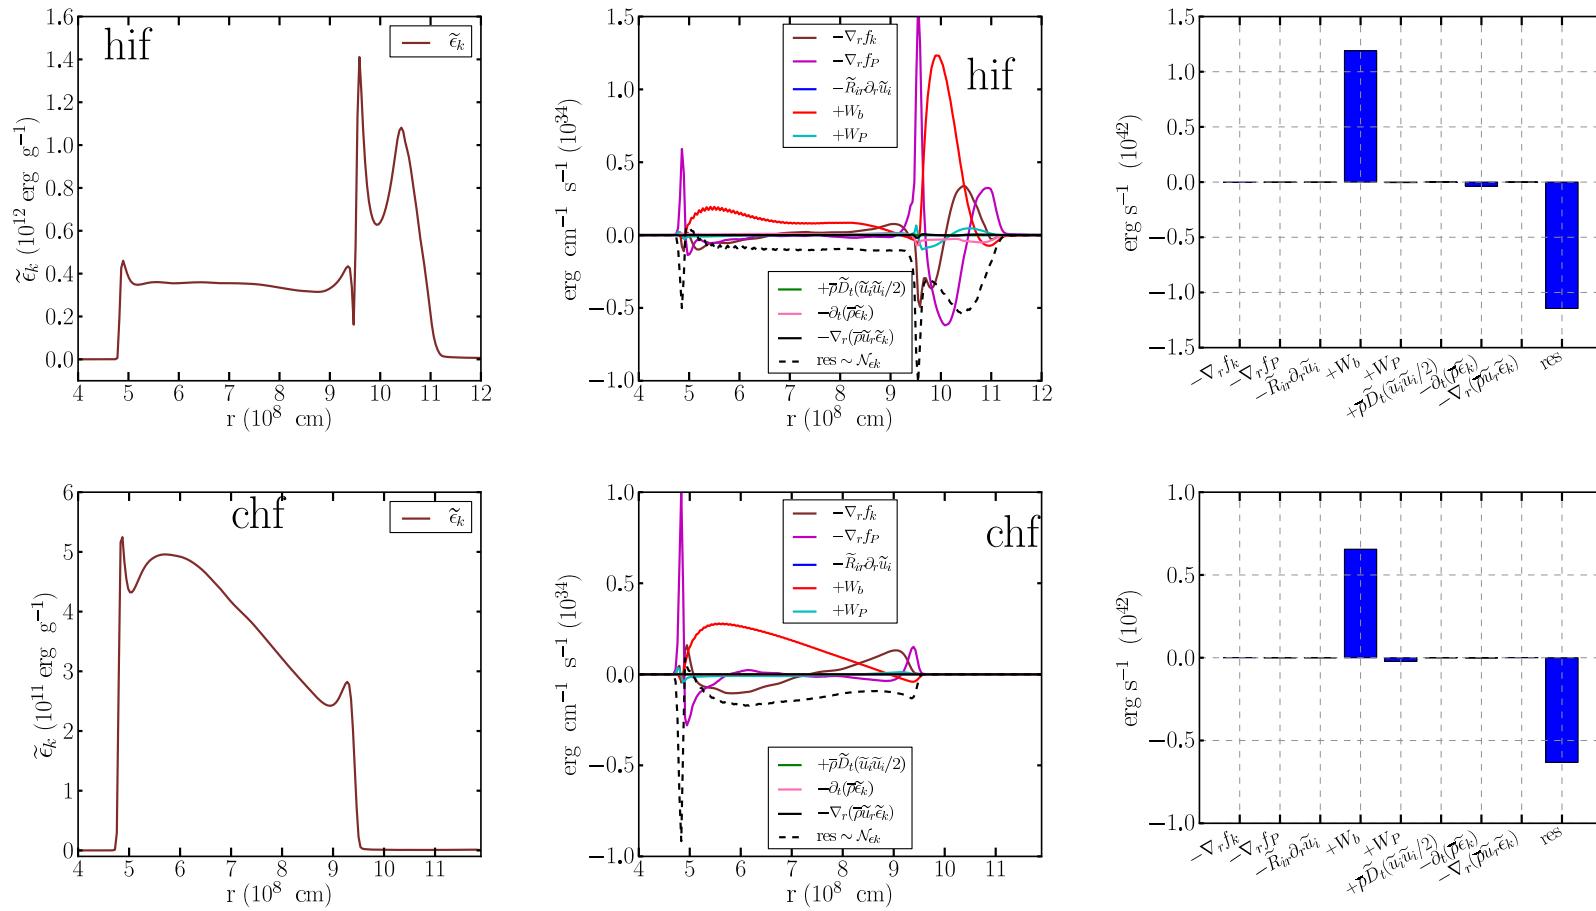

Figure 93: Mean kinetic energy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.7 Mean total energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_t = -\nabla_r(f_I + f_T + f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i - \bar{P} \bar{d} + W_b + \mathcal{S} + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) + \mathcal{N}_{et} \quad (95)$$

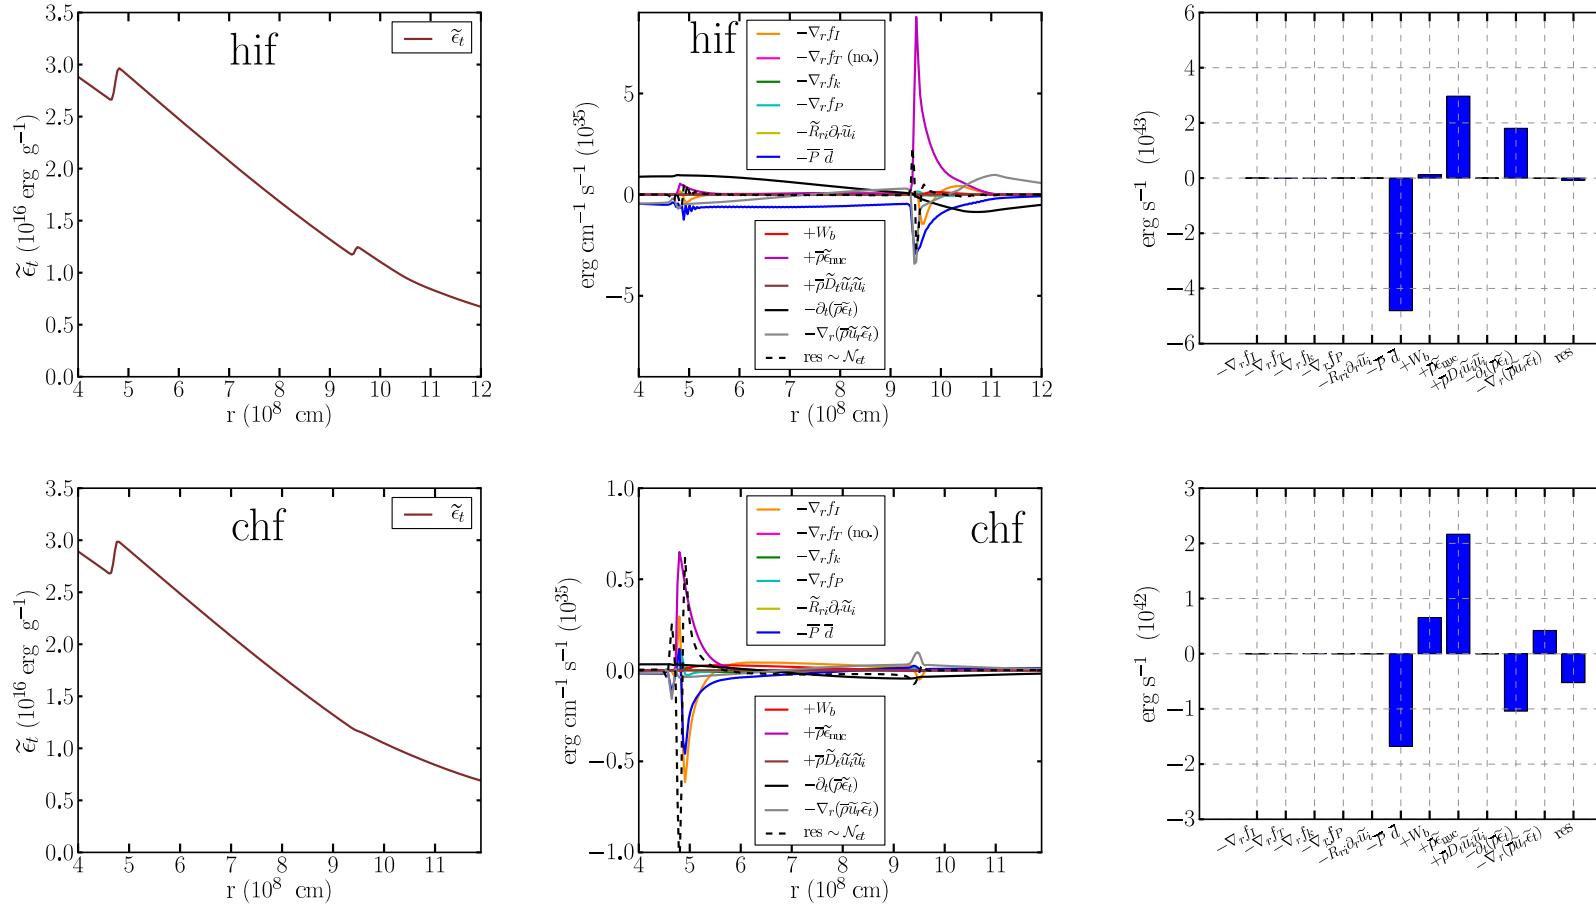

Figure 94: Mean total energy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.8 Mean entropy equation

$$\bar{\rho} \tilde{D}_t \tilde{s} = -\nabla_r f_s - (\nabla \cdot F_T)/\bar{T} + \bar{\mathcal{S}}/\bar{T} + \mathcal{N}_s \quad (96)$$

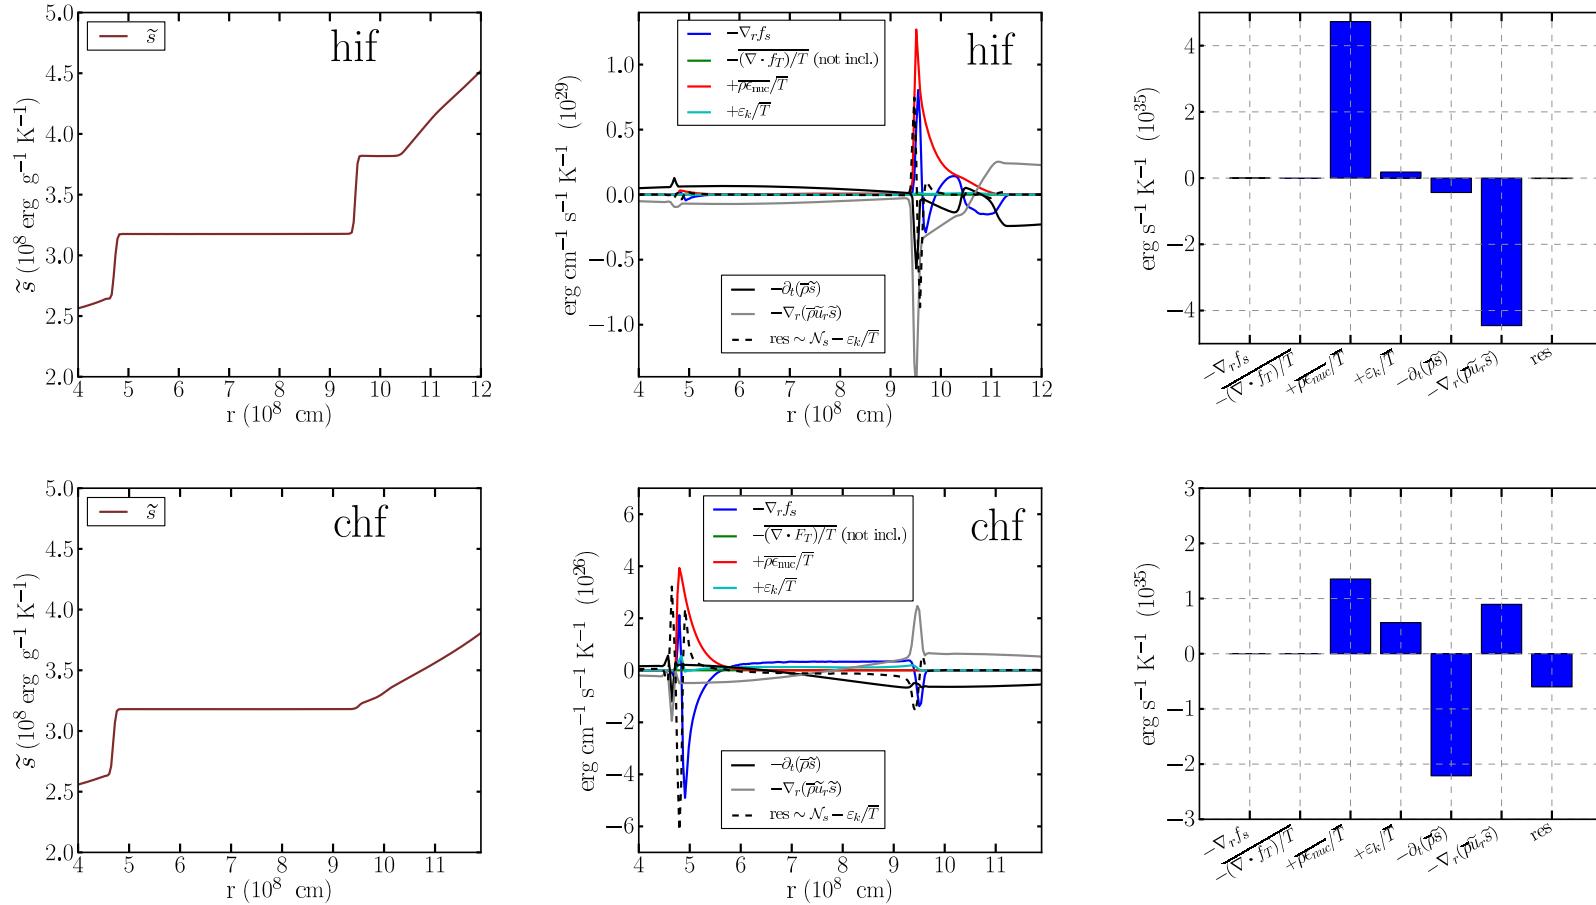

Figure 95: Mean entropy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.9 Mean pressure equation

$$\bar{D}_t \bar{P} = -\nabla_r f_P - \Gamma_1 \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) \mathcal{S} + (\Gamma_3 - 1) \nabla_r f_T + \mathcal{N}_P \quad (97)$$

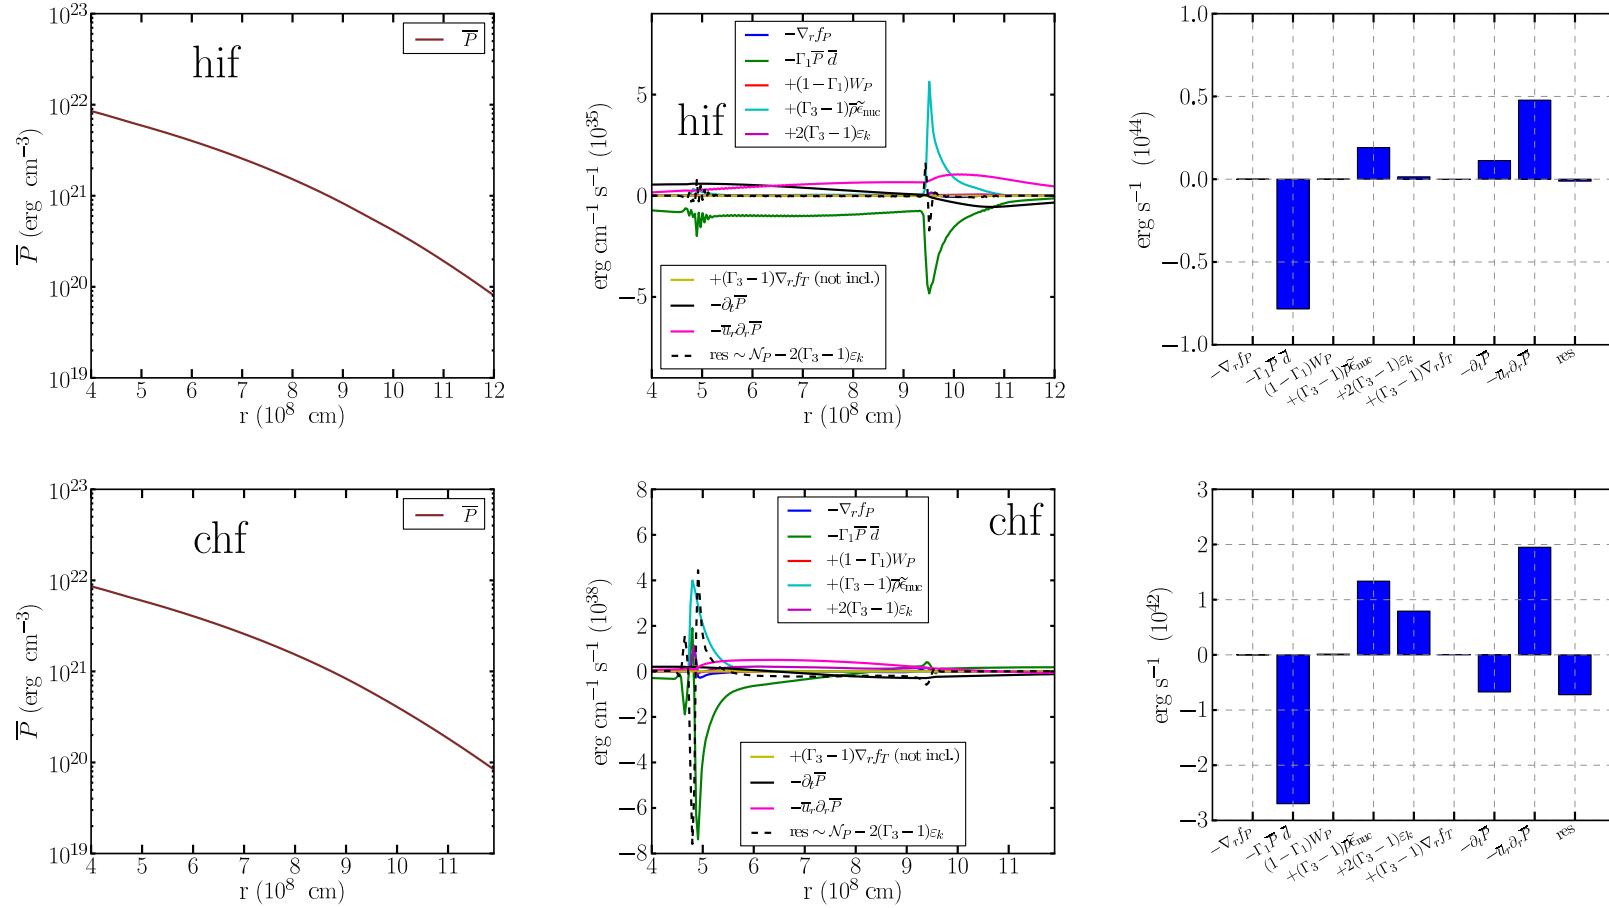

Figure 96: Mean pressure equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.10 Mean enthalpy equation

$$\bar{\rho} \tilde{D}_t \tilde{h} = -\nabla_r f_h - \Gamma_1 \bar{P} \bar{d} - \Gamma_1 W_P + \Gamma_3 \mathcal{S} + \Gamma_3 \nabla_r f_T + \mathcal{N}_h \quad (98)$$

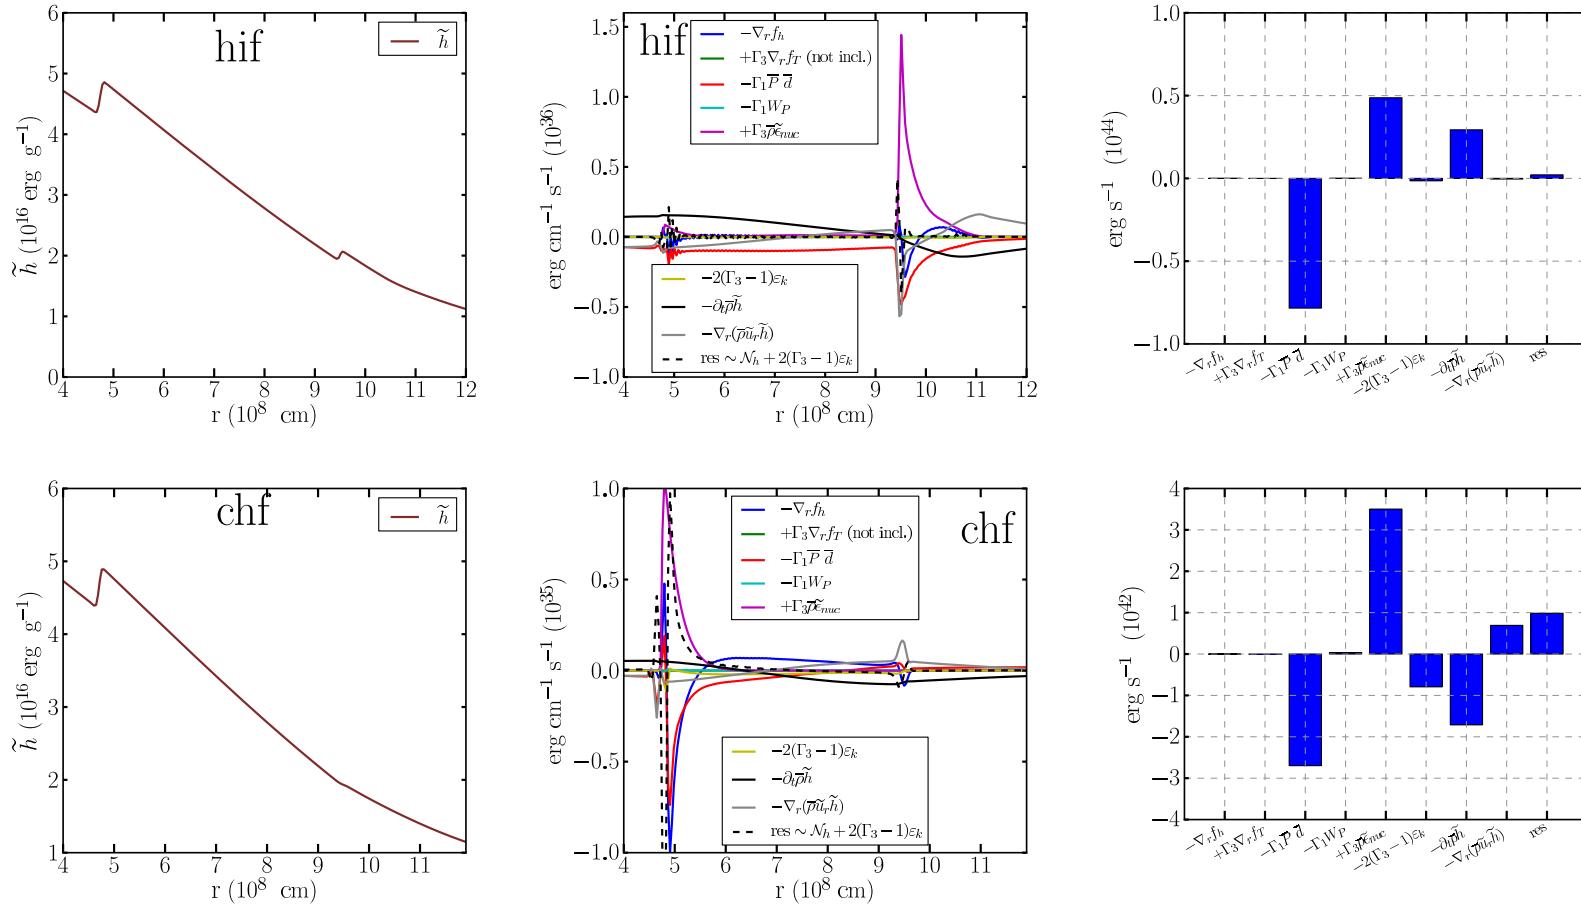

Figure 97: Mean enthalpy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.11 Mean angular momentum equation (z-component)

$$\bar{\rho} \tilde{D}_t \tilde{j}_z = -\nabla_r f_{jz} + \mathcal{N}_{jz} \quad (99)$$

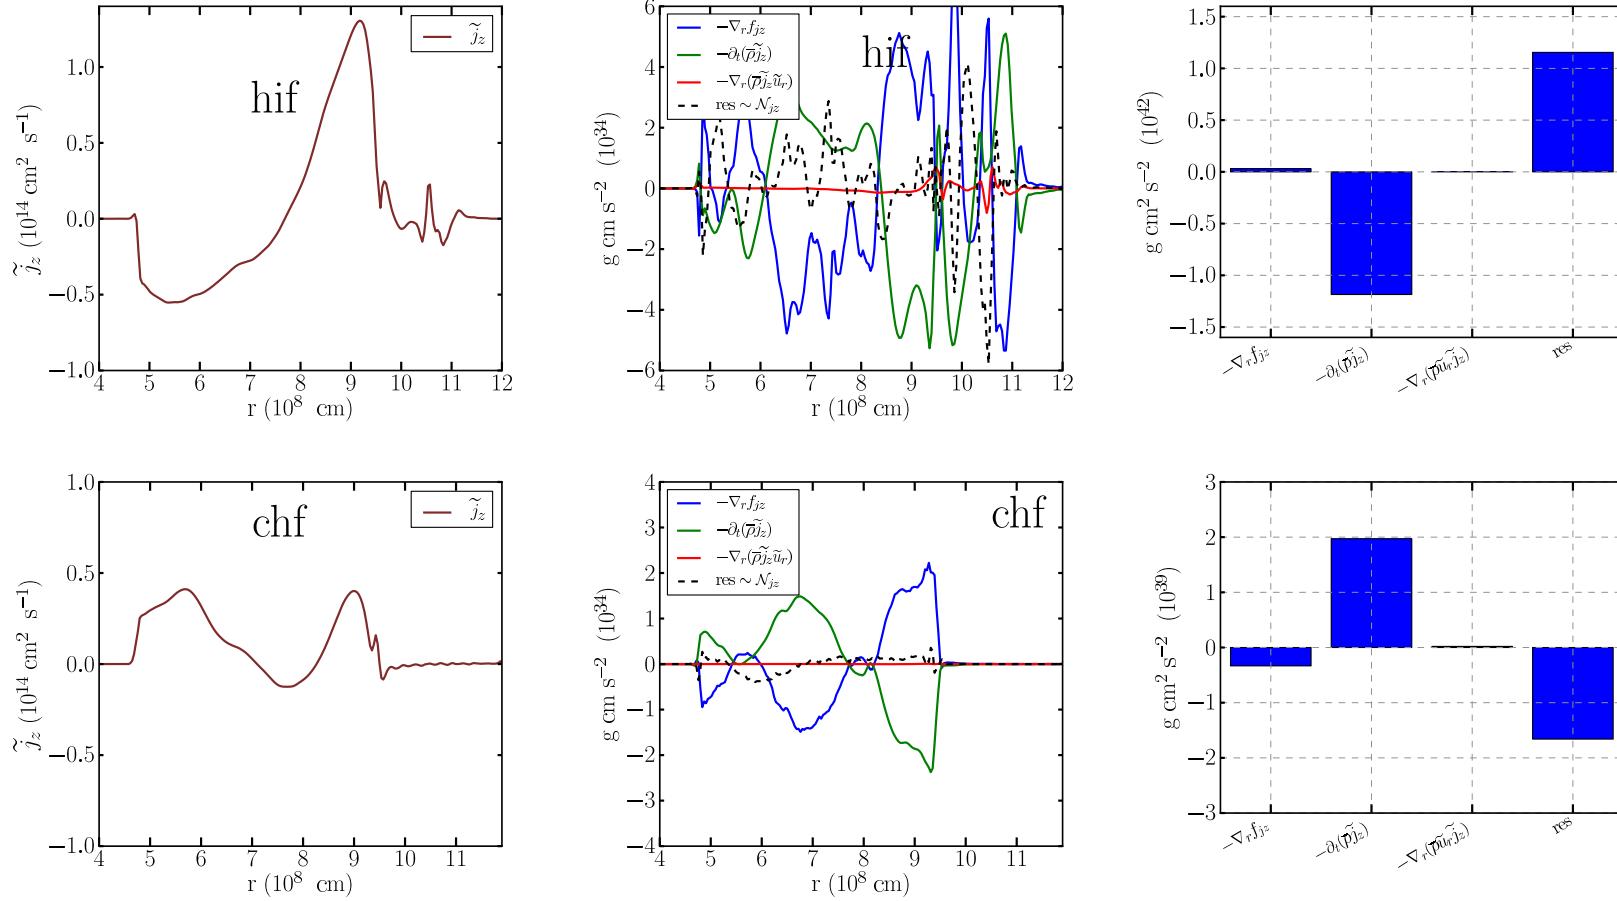

Figure 98: Mean angular momentum equation (z-component). Model hif.3D (upper panels) and model chf.3D (lower panels)

14.12 Mean composition equations

$$\bar{\rho} \tilde{D}_t \tilde{X}_\alpha = -\nabla_r f_\alpha + \bar{\rho} \tilde{X}_\alpha^{\text{nuc}} + \mathcal{N}_\alpha \quad (100)$$

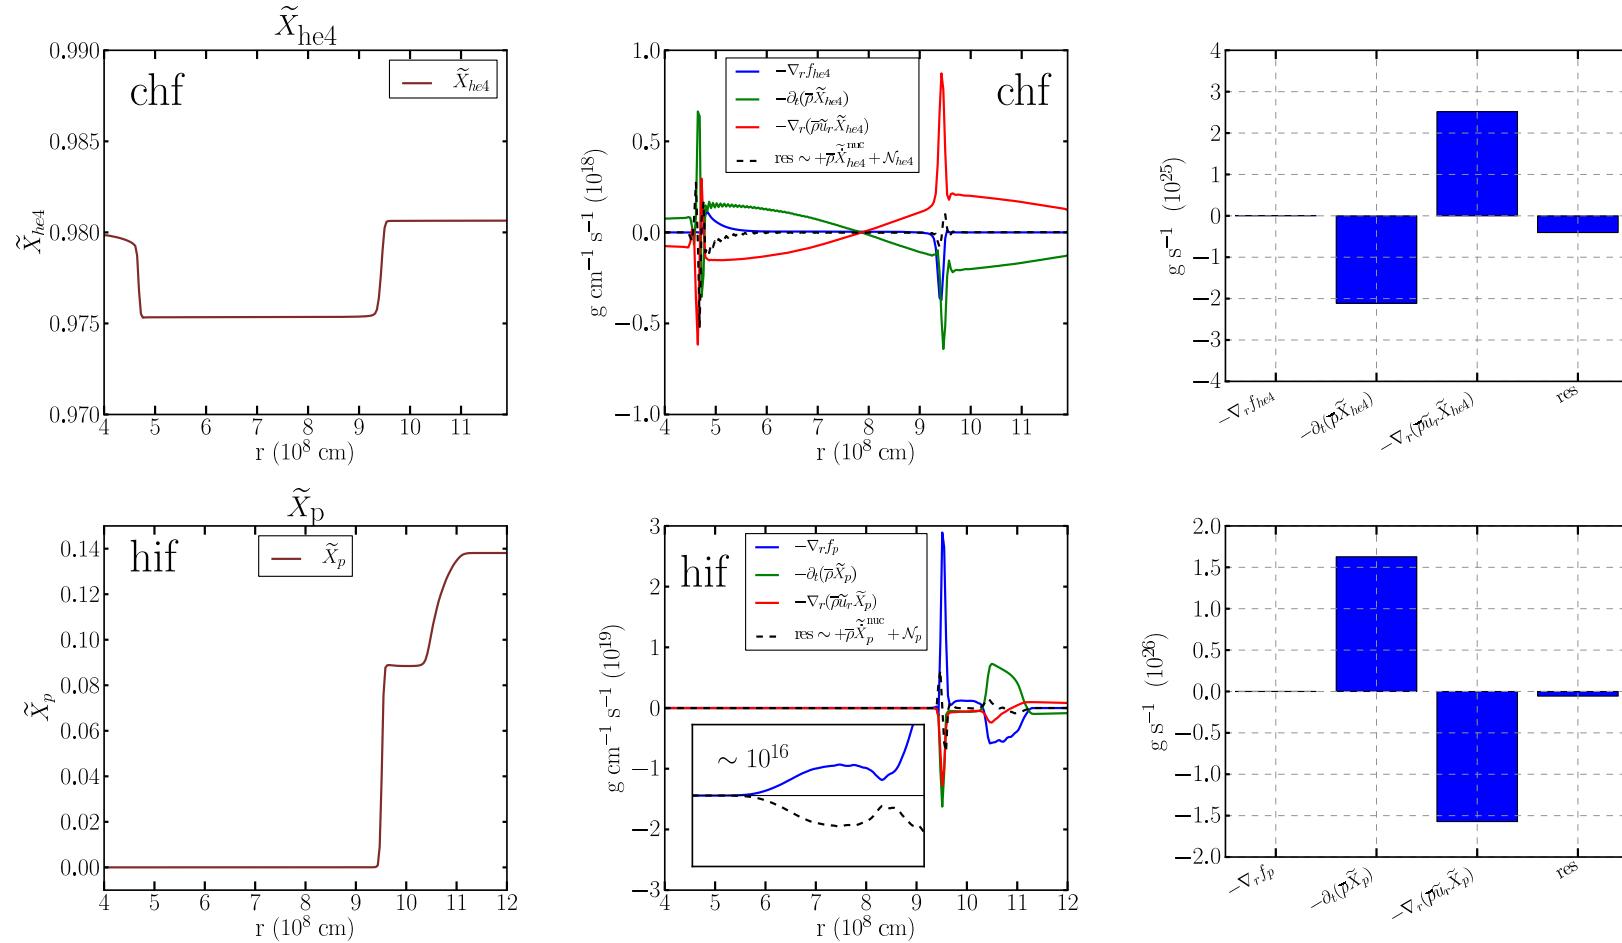

Figure 99: Mean composition equations. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.13 Mean turbulent kinetic energy equation

$$\bar{\rho} \tilde{D}_t \tilde{k} = -\nabla_r(f_k + f_P) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P + \mathcal{N}_k \quad (101)$$

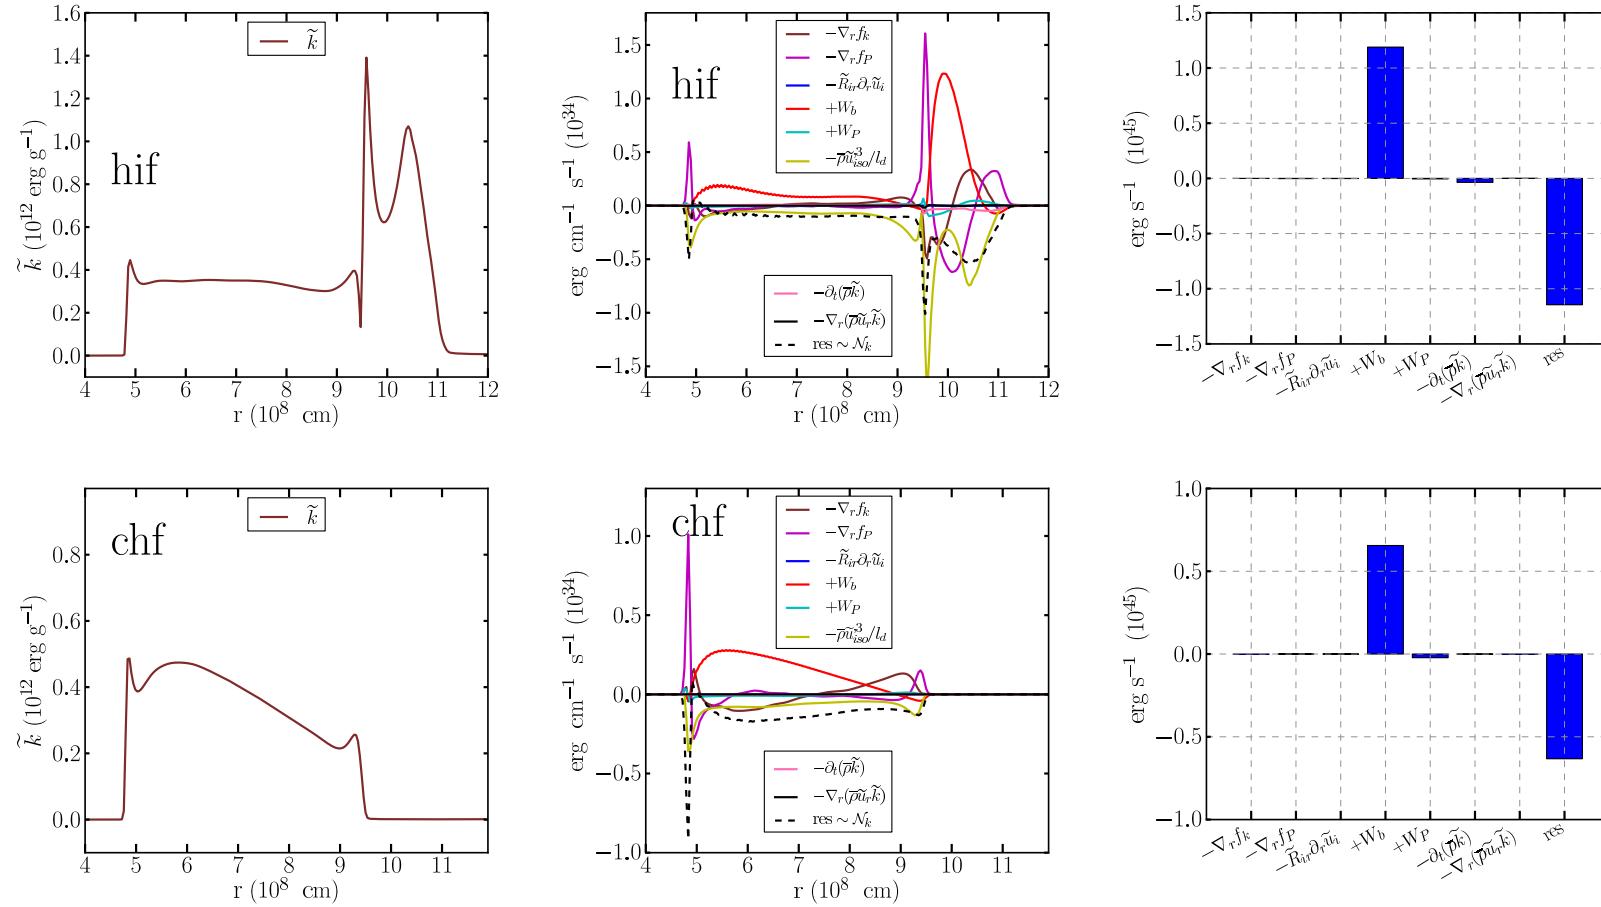

Figure 100: Mean turbulent kinetic energy equation. Model hif.3D (upper panels) and model chf.3D (lower panels)

14.14 Radial part of mean turbulent kinetic energy equation

$$\bar{\rho} \tilde{D}_t \tilde{k}^r = -\nabla_r(f_k^r + f_P) - \tilde{R}_{rr} \partial_r \tilde{u}_r + W_b + \overline{P' \nabla_r u_r''} + \mathcal{G}_k^r + \mathcal{N}_{kr} \quad (102)$$

18 Instantaneous hydrodynamic equations in spherical coordinates (Lagrangian form)

The hydrodynamic equations of a viscous multi-component reactive gas subject to gravity and thermal transport in spherical coordinates (r, θ, ϕ) are ($D_t(\cdot) = \partial_t(\cdot) + u_n \partial_n(\cdot)$ is advective derivative):

$$D_t(\rho) = -\rho \left(\frac{1}{r^2} \partial_r(r^2[u_r]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi(u_\phi) \right) \quad (113)$$

$$\rho D_t(u_r) = + \left(\frac{1}{r^2} \partial_r(r^2[\tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi([\tau_{r\phi}]) - G_r^M - \partial_r P \right) + \rho g_r \quad (114)$$

$$\rho D_t(u_\theta) = + \left(\frac{1}{r^2} \partial_r(r^2[\tau_{\theta r}]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\tau_{\theta\theta}]) + \frac{1}{r \sin \theta} \partial_\phi([\tau_{\theta\phi}]) - G_\theta^M - \frac{1}{r} \partial_\theta P \right) + \rho g_\theta \quad (115)$$

$$\rho D_t(u_\phi) = + \left(\frac{1}{r^2} \partial_r(r^2[\tau_{\phi r}]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\tau_{\phi\theta}]) + \frac{1}{r \sin \theta} \partial_\phi([\tau_{\phi\phi}]) - G_\phi^M - \frac{1}{r \sin \theta} \partial_\phi P \right) + \rho g_\phi \quad (116)$$

$$\begin{aligned} \rho D_t(\epsilon_T) = & - \left(\frac{1}{r^2} \partial_r(r^2[u_r P - K \partial_r T]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[u_\theta P - K \frac{1}{r} \partial_\theta T]) + \frac{1}{r \sin \theta} \partial_\phi(u_\phi P - K \frac{1}{r \sin \theta} \partial_\phi T) \right) - \\ & + \left(\frac{1}{r^2} \partial_r[r^2(u_j \tau_{jr})] + \frac{1}{r \sin \theta} \partial_\theta[\sin \theta(u_j \tau_{j\theta})] + \frac{1}{r \sin \theta} \partial_\phi(u_j \tau_{j\phi}) \right) + \rho(u_r g_r + u_\theta g_\theta + u_\phi g_\phi) + \rho \epsilon_{nuc} \end{aligned} \quad (117)$$

$$\begin{aligned} \rho D_t(\epsilon_I) = & - P \left(\frac{1}{r^2} \partial_r(r^2[u_r]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi(u_\phi) \right) + \left(\frac{1}{r^2} \partial_r(r^2[K \partial_r T]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[K \frac{1}{r} \partial_\theta T]) + \frac{1}{r \sin \theta} \partial_\phi(K \frac{1}{r \sin \theta} \partial_\phi T) \right) + \\ & + \left(\tau_{jr} \partial_r u_j + \tau_{j\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) + \rho \epsilon_{nuc} \end{aligned} \quad (118)$$

$$\begin{aligned} \rho D_t(\epsilon_K) = & + \left(\frac{1}{r^2} \partial_r[r^2(u_j \tau_{jr})] + \frac{1}{r \sin \theta} \partial_\theta[\sin \theta(u_j \tau_{j\theta})] + \frac{1}{r \sin \theta} \partial_\phi(u_j \tau_{j\phi}) \right) - \left(\frac{1}{r^2} \partial_r(r^2[P u_r]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[P u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi(P u_\phi) \right) + \\ & + P \left(\frac{1}{r^2} \partial_r(r^2[u_r]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi(u_\phi) \right) - \left(\tau_{jr} \partial_r u_j + \tau_{j\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) + \rho(u_r g_r + u_\theta g_\theta + u_\phi g_\phi) \end{aligned} \quad (119)$$

$$\rho D_t(X_k) = + \rho \dot{X}_k^n \quad k = 1 \dots N_{nuc} \quad (120)$$

$$G_r^M = - \frac{(\rho u_\theta^2 - \tau_{\theta\theta})}{r} - \frac{(\rho u_\phi^2 - \tau_{\phi\phi})}{r} \quad G_\theta^M = + \frac{(\rho u_\theta u_r - \tau_{\theta r})}{r} - \frac{(\rho u_\phi^2 - \tau_{\phi\phi}) \cos \theta}{r \sin \theta} \quad G_\phi^M = + \frac{(\rho u_\phi u_r - \tau_{\phi r})}{r} + \frac{(\rho u_\phi u_\theta - \tau_{\phi\theta}) \cos \theta}{r \sin \theta} \quad (121)$$

where ρ , u_r , u_θ , u_ϕ , P , ϵ_T , ϵ_I , ϵ_K , T , ϵ_{nuc} , X_k , and \dot{X}_k^n are the density, the radial velocity, the θ -velocity, the rotation velocity, the pressure, the total specific energy, the specific internal energy, the specific kinetic energy, the temperature, the energy generation rate per mass due to reactions, the mass fraction of species k , and the change of this mass fraction due to reactions, respectively. N_{nuc} is the number of species the gas is composed. $\tau_{ij} = 2\mu S_{ij} - 2/3\mu \nabla \cdot \mathbf{u} \delta_{ij}$ is the viscous stress, where $S_{ij} = \frac{1}{2}(\partial_i u_j + \partial_j u_i)$ is strain-rate, $\mu = \rho\nu$ is dynamic viscosity and ν is the kinematic viscosity. K is thermal conductivity. g_i is gravitational acceleration in r, θ, ϕ and Φ is gravitational potential. G are geometric terms.

19 Reynolds decomposition

Reynolds decomposition:

$$A(r, \theta, \phi) = \overline{A}(r) + A'(r, \theta, \phi) \quad (122)$$

Definition of the averaging space-time operator:

$$\overline{A(r)} = \frac{1}{\Delta T \Delta \Omega} \int_{\Delta T} \int_{\Delta \Omega} A(r, \theta, \phi) dt d\Omega \quad (123)$$

Some properties of the operator:

$$\overline{A'} = 0 \quad (124)$$

$$\overline{\overline{A}} = \overline{A} \quad (125)$$

$$(A')' = A' \quad (126)$$

$$\overline{\overline{AB}} = \overline{A} \overline{B} \quad (127)$$

$$\overline{AB} = \overline{A} \overline{B} + \overline{A'B'} \quad (128)$$

$$\overline{A'B'} = \overline{A'} \overline{B} \quad (129)$$

20 Favre decomposition

Favre decomposition:

$$F = \tilde{F}(r) + F''(r, \theta, \phi) \quad (130)$$

Definition of the averaging operator:

$$\tilde{F} = \frac{\overline{\rho F}}{\overline{\rho}} \quad (131)$$

Some properties of the operator:

$$\overline{\rho F''} = \widetilde{F''} = 0 \quad (132)$$

$$\widetilde{F} = \overline{F} + \frac{\overline{\rho F'}}{\overline{\rho}} \quad (133)$$

$$F'' = F' - \frac{\overline{\rho F'}}{\overline{\rho}} \rightarrow \overline{F''} = -\frac{\overline{\rho F'}}{\overline{\rho}} \quad (134)$$

$$\overline{\rho F'' G''} = \overline{\rho} \widetilde{F'' G''} \quad (135)$$

21 Derivation of first order moments

21.1 Mean continuity equation

We begin by instantaneous 3D continuity equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\partial_t \rho = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi (\rho u_\phi) \right) \quad (136)$$

$$\partial_t \bar{\rho} = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi (\rho u_\phi) \right) \xrightarrow{0} \text{"ensemble" (space-time) averaging} \quad (137)$$

$$\partial_t \bar{\rho} = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}_r]) \quad (138)$$

$$\partial_t \bar{\rho} = - \tilde{u}_r \partial_r \bar{\rho} - \bar{\rho} \frac{1}{r^2} \partial_r (r^2 \tilde{u}_r) \quad (139)$$

$$\partial_t \bar{\rho} + \tilde{u}_r \partial_r \bar{\rho} = - \bar{\rho} \frac{1}{r^2} \partial_r (r^2 \tilde{u}_r) \quad (140)$$

$$\tilde{D}_t \bar{\rho} = - \bar{\rho} \tilde{d} \quad (141)$$

21.2 Mean radial momentum equation

We begin by instantaneous 3D radial momentum equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\partial_t \rho u_r = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r^2 - \tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_r u_\theta - \tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\rho u_r u_\phi - \tau_{r\phi}]) + G_r^M + \partial_r P \right) + \rho g_r \quad (142)$$

$$\partial_t \bar{\rho} u_r = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r^2 - \tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_r u_\theta - \tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\rho u_r u_\phi - \tau_{r\phi}]) + \bar{G}_r^M + \partial_r \bar{P} \right) + \bar{\rho} g_r \quad (143)$$

$$\partial_t \bar{\rho} u_r = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} u_r u_r]) - \frac{1}{r^2} \partial_r (r^2 \bar{\tau}_{rr}) - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} g_r \quad \text{we neglect mean viscosity } \bar{\tau} \quad (144)$$

$$\partial_t \bar{\rho} \widetilde{u_r} = -\frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_r u_r}]) - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} \widetilde{g}_r \quad (145)$$

$$\partial_t \bar{\rho} \widetilde{u_r} = -\frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_r u_r} + \bar{\rho} \widetilde{u_r'' u_r''}]) - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} \widetilde{g}_r \quad (146)$$

$$\partial_t \bar{\rho} \widetilde{u_r} + \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_r u_r}]) = -\frac{1}{r^2} \partial_r (\bar{\rho} \widetilde{u_r'' u_r''}) - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} \widetilde{g}_r \quad (147)$$

$$\bar{\rho} \widetilde{D}_t \widetilde{u_r} = -\nabla_r \widetilde{R}_{rr} - \bar{G}_r^M - \partial_r \bar{P} + \bar{\rho} \widetilde{g}_r \quad (148)$$

21.3 Mean polar momentum equation

We begin by instantaneous 3D polar momentum equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\partial_t \rho u_\theta = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_\theta u_r - \tau_{\theta r}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta^2 - \tau_{\theta \theta}]) + \frac{1}{r \sin \theta} \partial_\phi (\rho u_\theta u_\phi - \tau_{\theta \phi}) \right) + G_\theta^M + \frac{1}{r} \partial_\theta P - \rho \frac{1}{r} \partial_\theta \Phi \quad (149)$$

$$\partial_t \bar{\rho} \widetilde{u_\theta} = - \left(\overline{\frac{1}{r^2} \partial_r (r^2 [\rho u_\theta u_r - \tau_{\theta r}])} + \overline{\frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta^2 - \tau_{\theta \theta}])} + \overline{\frac{1}{r \sin \theta} \partial_\phi (\rho u_\theta u_\phi - \tau_{\theta \phi})} \right)^0 + \bar{G}_\theta^M + \frac{1}{r} \partial_\theta \bar{P} + \bar{\rho} \widetilde{g}_\theta \quad (150)$$

$$\partial_t \bar{\rho} \widetilde{u_\theta} = -\frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_\theta u_r}]) + \frac{1}{r^2} \partial_r (r^2 \bar{\tau}_{\theta r})^0 - \bar{G}_\theta^M - \frac{1}{r} \partial_\theta \bar{P} + \bar{\rho} \widetilde{g}_\theta^0 \text{ we neglect mean viscosity } \bar{\tau} \text{ and gravity in } \theta \quad (151)$$

$$\partial_t \bar{\rho} \widetilde{u_\theta} = -\frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_\theta u_r}]) - \bar{G}_\theta^M - \frac{1}{r} \partial_\theta \bar{P} \quad (152)$$

$$\partial_t \bar{\rho} \widetilde{u_\theta} = -\frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_\theta \widetilde{u_r}} + \bar{\rho} \widetilde{u_\theta'' u_r''}]) - \bar{G}_\theta^M - \frac{1}{r} \partial_\theta \bar{P} \quad (153)$$

$$\partial_t \bar{\rho} \widetilde{u_\theta} + \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \widetilde{u_\theta \widetilde{u_r}}]) = -\frac{1}{r^2} \partial_r (r^2 \bar{\rho} \widetilde{u_\theta'' u_r''}) - \bar{G}_\theta^M - \frac{1}{r} \partial_\theta \bar{P} \quad (154)$$

$$\bar{\rho} \widetilde{D}_t \widetilde{u_\theta} = -\nabla_r \widetilde{R}_{\theta r} - \bar{G}_\theta^M - (1/r) \partial_\theta \bar{P} \quad (155)$$

21.4 Mean azimuthal momentum equation

We begin by instantaneous 3D azimuthal momentum equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\partial_t(\rho u_\phi) = - \left(\frac{1}{r^2} \partial_r(r^2[\rho u_\phi u_r - \tau_{\phi r}]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\rho u_\theta u_\phi - \tau_{\theta \phi}]) + \frac{1}{r \sin \theta} \partial_\phi([\rho u_\phi^2 - \tau_{\phi \phi}]) + G_\phi^M + \frac{1}{r \sin \theta} \partial_\phi P \right) - \rho \frac{1}{r \sin \theta} \partial_\phi \Phi \quad (156)$$

$$\begin{aligned} \partial_t \overline{\rho u_\phi} &= - \left(\frac{1}{r^2} \partial_r(r^2[\rho u_\phi u_r - \tau_{\phi r}]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\rho u_\theta u_\phi - \tau_{\theta \phi}]) + \frac{1}{r \sin \theta} \partial_\phi([\rho u_\phi^2 - \tau_{\phi \phi}]) + \overline{G_\phi^M} + \frac{1}{r \sin \theta} \partial_\phi \overline{P} \right) + \\ &\quad + \overline{\rho g_\phi} \end{aligned} \quad (157)$$

$$\partial_t \overline{\rho u_\phi} = - \frac{1}{r^2} \partial_r(r^2[\overline{\rho u_\phi u_r}]) - \frac{1}{r^2} \partial_r(r^2 \overline{\tau_{\phi r}}) + \overline{G_\phi^M} - \overline{\rho g_\phi} \xrightarrow{0} \text{we neglect mean viscosity } \tau \text{ and gravity in } \phi \quad (158)$$

$$\partial_t \overline{\rho \tilde{u}_\phi} = - \frac{1}{r^2} \partial_r(r^2[\overline{\rho u_\phi \tilde{u}_r}]) + \overline{G_\phi^M} \quad (159)$$

$$\partial_t \overline{\rho \tilde{u}_\phi} = - \frac{1}{r^2} \partial_r(r^2[\overline{\rho \tilde{u}_\phi \tilde{u}_r} - \overline{\rho u_\phi'' u_r''}]) - \overline{G_\phi^M} \quad (160)$$

$$\partial_t \overline{\rho \tilde{u}_\phi} + \frac{1}{r^2} \partial_r(r^2[\overline{\rho \tilde{u}_\phi \tilde{u}_r}]) = - \frac{1}{r^2} \partial_r(r^2 \overline{\rho u_\phi'' u_r''}) - \overline{G_\phi^M} \quad (161)$$

$$\overline{\rho \tilde{D}_t \tilde{u}_\phi} = - \nabla_r \tilde{R}_{\phi r} - \overline{G_\phi^M} \quad (162)$$

21.5 Mean internal energy equation

We begin by instantaneous 3D internal energy equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\begin{aligned} \partial_t(\rho \epsilon_I) &= - \left(\frac{1}{r^2} \partial_r(r^2[\rho u_r \epsilon_I]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[\rho u_\theta \epsilon_I]) + \frac{1}{r \sin \theta} \partial_\phi(\rho u_\phi \epsilon_I) \right) - P \left(\frac{1}{r^2} \partial_r(r^2[u_r]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi(u_\phi) \right) + \\ &\quad + \left(\frac{1}{r^2} \partial_r(r^2[K \partial_r T]) + \frac{1}{r \sin \theta} \partial_\theta(\sin \theta[K \frac{1}{r} \partial_\theta T]) + \frac{1}{r \sin \theta} \partial_\phi(K \frac{1}{r \sin \theta} \partial_\phi T) \right) + \left(\tau_{j_r} \partial_r u_j + \tau_{j_\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j_\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) + \rho \epsilon_{\text{nuc}} \end{aligned} \quad (163)$$

$$\begin{aligned} \partial_t \bar{\rho} \epsilon_I = & - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r \epsilon_I]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta \epsilon_I]) + \frac{1}{r \sin \theta} \partial_\phi (\rho u_\phi \epsilon_I) \right)^0 - P \left(\frac{1}{r^2} \partial_r (r^2 [u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [u_\phi] \right) + \\ & + \left(\frac{1}{r^2} \partial_r (r^2 [K \partial_r T]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [K \frac{1}{r} \partial_\theta T]) + \frac{1}{r \sin \theta} \partial_\phi [K \frac{1}{r \sin \theta} \partial_\phi T] \right)^0 + \left(\tau_{jr} \partial_r u_j + \tau_{j\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) + \bar{\rho} \epsilon_{\text{nuc}} \end{aligned} \quad (164)$$

$$\partial_t \bar{\rho} \epsilon_I = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} u_r \epsilon_I]) - \bar{P} \bar{d} + \frac{1}{r^2} \partial_r (r^2 [\chi \partial_r T]) + \tau_{ji} \partial_i u_j + \bar{\rho} \epsilon_{\text{nuc}} \quad (165)$$

$$\partial_t \bar{\rho} \tilde{\epsilon}_I = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} u_r \tilde{\epsilon}_I]) - \bar{P} \bar{d} + \frac{1}{r^2} \partial_r (r^2 [\chi \partial_r T]) + \tau_{ji} \partial_i u_j + \bar{\rho} \epsilon_{\text{nuc}} \quad (166)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_I = - \nabla_r f_I - \bar{P} \bar{d} + \nabla_r f_T + \bar{\tau}'_{ji} \partial_i u'_j + \bar{\rho} \tilde{\epsilon}_{\text{nuc}} \quad (168)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_I = - \nabla_r (f_I + f_T) - \bar{P} \bar{d} - \bar{P}' \bar{d}' + \varepsilon_k + \bar{\rho} \tilde{\epsilon}_{\text{nuc}} \quad (169)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_I = - \nabla_r (f_I + f_T) - \bar{P} \bar{d} - W_P + \varepsilon_k + \bar{\rho} \tilde{\epsilon}_{\text{nuc}} \quad (170)$$

21.6 Mean kinetic energy equation

We begin by instantaneous 3D kinetic energy equation and apply "ensemble" (space-time) averaging (Sect.1):

$$\begin{aligned} \partial_t (\rho \epsilon_K) = & - \left(\frac{1}{r^2} \partial_r (r^2 (\rho u_r \epsilon_K - u_j \tau_{jr})) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta (\rho u_\theta \epsilon_K - u_j \tau_{j\theta})) + \frac{1}{r \sin \theta} \partial_\phi (\rho u_\phi \epsilon_K - u_j \tau_{j\phi}) \right) - \\ & - \left(\frac{1}{r^2} \partial_r (r^2 [P u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [P u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi (P u_\phi) \right) + P \left(\frac{1}{r^2} \partial_r (r^2 [u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [u_\phi] \right) - \\ & - \left(\tau_{jr} \partial_r u_j + \tau_{j\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) - \rho (u_r \partial_r \Phi + u_\theta \frac{1}{r} \partial_\theta \Phi + u_\phi \frac{1}{r \sin \theta} \partial_\phi \Phi) \end{aligned} \quad (171)$$

$$\begin{aligned} \partial_t \overline{\rho \epsilon_K} = & - \left(\frac{1}{r^2} \partial_r [r^2 (\rho u_r \epsilon_K - u_j \tau_{jr})] + \frac{1}{r \sin \theta} \partial_\theta [\sin \theta (\rho u_\theta \epsilon_K - u_j \tau_{j\theta})] + \frac{1}{r \sin \theta} \partial_\phi [\rho u_\phi \epsilon_K - u_j \tau_{j\phi}] \right)^0 - \\ & - \left(\frac{1}{r^2} \partial_r (r^2 [P u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [P u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [P u_\phi] \right)^0 + P \left(\frac{1}{r^2} \partial_r (r^2 [u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [u_\phi] \right) - \\ & - \left(\tau_{jr} \partial_r u_j + \tau_{j\theta} \frac{1}{r} \partial_\theta u_j + \tau_{j\phi} \frac{1}{r \sin \theta} \partial_\phi u_j \right) + \rho (u_r g_r + \cancel{u_\theta g_\theta} + \cancel{u_\phi g_\phi})^0 \end{aligned} \quad (172)$$

$$\partial_t \overline{\rho \epsilon_K} = - \frac{1}{r^2} \partial_r [r^2 (\overline{\rho u_r \epsilon_K})] - \frac{1}{r^2} \partial_r [r^2 (\overline{u_j \tau_{jr}})] - \frac{1}{r^2} \partial_r (r^2 [\overline{P u_r}]) + \overline{P d} - \overline{\tau_{ji} \partial_i u_j} + \overline{\rho u_r g_r} \quad (173)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \frac{1}{r^2} \partial_r [r^2 (\overline{\rho u'_r \epsilon''_K})] - \frac{1}{r^2} \partial_r [r^2 (\overline{u'_j \tau'_{jr}})] - \frac{1}{r^2} \partial_r [r^2 (\overline{u'_j \tau'_{jr}})] - \frac{1}{r^2} \partial_r (r^2 [\overline{P u_r}]) - \frac{1}{r^2} \partial_r (r^2 [\overline{P' u'_r}]) + \overline{P} \bar{d} + \overline{P' d'} - \varepsilon_k - \bar{\rho} \overline{u'_r} \tilde{g}_r + \bar{\rho} \overline{u_r} \tilde{g}_r \quad (174)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \frac{1}{r^2} \partial_r [r^2 (\overline{\rho u'_r \epsilon''_K})] - \frac{1}{r^2} \partial_r [r^2 (\overline{u'_j \tau'_{jr}})] - \frac{1}{r^2} \partial_r (r^2 [\overline{P u_r}]) - \frac{1}{r^2} \partial_r (r^2 [\overline{P' u'_r}]) + \overline{P} \bar{d} + W_P - \varepsilon_k + W_b + \bar{\rho} \overline{u_r} \tilde{g}_r \quad (175)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \nabla_r \overline{\rho u'_r \epsilon''_K} - \nabla_r f_\tau - (\overline{P} \nabla_r \bar{u}_r + \bar{u}_r \partial_r \overline{P}) - \nabla_r f_P + \overline{P} \bar{d} + W_P - \varepsilon_k + W_b + \bar{\rho} \overline{u_r} \tilde{g}_r \quad (176)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \nabla_r \overline{\rho u'_r \epsilon''_K} - \nabla_r f_\tau - \overline{P} \bar{d} - \bar{\rho} \overline{u_r} \tilde{g}_r - \nabla_r f_P + \overline{P} \bar{d} + W_P - \varepsilon_k + W_b + \bar{\rho} \overline{u_r} \tilde{g}_r \quad (177)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \nabla_r \overline{\rho u''_r \epsilon''_K} - \nabla_r (f_\tau + f_P) + W_P - \varepsilon_k + W_b \quad (178)$$

Second way:

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = + \bar{\rho} \tilde{D}_t \tilde{u}_i \tilde{u}_i + \bar{\rho} \tilde{D}_t \tilde{u}'_i \tilde{u}''_i \quad (179)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = + \bar{\rho} \tilde{D}_t \tilde{u}_i \tilde{u}_i + \bar{\rho} \tilde{D}_t \tilde{k} \quad (180)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_K = - \nabla_r (f_k + f_P + f_\tau) - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + W_P - \varepsilon_k + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) \quad (181)$$

where equation for the \tilde{k} is derived later.

21.7 Mean total energy equation

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_t = + \bar{\rho} \tilde{D}_t \tilde{\epsilon}_I + \bar{\rho} \tilde{D}_t \tilde{\epsilon}_K \quad (182)$$

$$\bar{\rho} \tilde{D}_t \tilde{\epsilon}_t = - \nabla_r (f_I + f_T + f_k + f_P + f_\tau) - \overline{P} \bar{d} - \tilde{R}_{ir} \partial_r \tilde{u}_i + W_b + S + \bar{\rho} \tilde{D}_t (\tilde{u}_i \tilde{u}_i / 2) \quad (183)$$

21.8 Mean pressure equation

We begin by deriving 3D instantaneous pressure equation and then apply "ensemble" (space-time) averaging (Sect.1):

$$dP = \frac{\partial P}{\partial \rho} \Big|_{\epsilon_I} d\rho + \frac{\partial P}{\partial \epsilon_I} \Big|_{\rho} d\epsilon_I = \frac{P}{\rho} (1 - \Gamma_3 + \Gamma_1) d\rho + \rho (\Gamma_3 - 1) d\epsilon_I \quad (184)$$

$$D_t P = + \frac{P}{\rho} (1 - \Gamma_3 + \Gamma_1) D_t \rho + (\Gamma_3 - 1) \rho D_t \epsilon_I \quad (185)$$

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (186)$$

$$\partial_t P = - u_n \partial_n P - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (187)$$

$$\partial_t P = - \left(\frac{1}{r^2} \partial_r (r^2 [P u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [P u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [P u_\phi] \right) + (1 - \Gamma_1) P d + (\Gamma_3 - 1) (\mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (188)$$

$$\partial_t \bar{P} = - \left(\frac{1}{r^2} \partial_r (r^2 [P u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [P u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [P u_\phi] \right)^0 + (1 - \Gamma_1) \bar{P} d + (\Gamma_3 - 1) (\mathcal{S} + \bar{\nabla} \cdot F_T + \tau'_{ij} \partial_i u_j) \quad (189)$$

$$\partial_t \bar{P} = - \frac{1}{r^2} \partial_r (r^2 [\bar{P} u_r]) - \frac{1}{r^2} \partial_r (r^2 [\bar{P}' u'_r]) + (1 - \Gamma_1) \bar{P} \bar{d} + (1 - \Gamma_1) \bar{P}' \bar{d}' + (\Gamma_3 - 1) (\mathcal{S} + \frac{1}{r^2} \partial_r (r^2 \chi \partial_r T) + \tau'_{ij} \partial_i u'_j + \tau'_{ij} \partial_i u'_j) \quad (190)$$

$$\partial_t \bar{P} = - \nabla_r \bar{P} \bar{u}_r - \nabla_r f_P + (1 - \Gamma_1) \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) (\mathcal{S} + \nabla_r f_T + \varepsilon_k) \quad (191)$$

$$\partial_t \bar{P} = - \bar{u}_r \partial_r \bar{P} - \bar{P} \bar{d} - \nabla_r f_P + (1 - \Gamma_1) \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) (\bar{\mathcal{S}} + \nabla_r f_T + \varepsilon_k) \quad (192)$$

$$\partial_t \bar{P} + \bar{u}_r \partial_r \bar{P} = - \nabla_r f_P - \Gamma_1 \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) (\mathcal{S} + \nabla_r f_T + \varepsilon_k) \quad (193)$$

$$\textcolor{red}{\partial_t \bar{P} = - \nabla_r f_P - \Gamma_1 \bar{P} \bar{d} + (1 - \Gamma_1) W_P + (\Gamma_3 - 1) (\mathcal{S} + \nabla_r f_T + \varepsilon_k)} \quad (194)$$

21.9 Mean enthalpy equation

We start from the total energy equation, where we can substitute $\rho \epsilon_t = \rho h + \rho \epsilon_k - P$ (for clarity reasons we use here more compact vector notation):

$$\partial_t \epsilon_t + \vec{\nabla} \cdot ((\rho \epsilon_t + P) \vec{u}) = \rho \vec{u} \cdot \vec{g} + \vec{\nabla} \cdot F_T + \mathcal{S} \quad (195)$$

$$\partial_t (\rho h + \rho \epsilon_k - P) + \vec{\nabla} \cdot (\rho h \vec{u} + \rho \epsilon_k \vec{u}) = \rho \vec{u} \cdot \vec{g} + \vec{\nabla} \cdot F_T + \mathcal{S} \quad (196)$$

$$\partial_t \rho h + \textcolor{brown}{\partial_t \rho \epsilon_k} - \textcolor{blue}{\partial_t P} = - \vec{\nabla} \cdot (\rho h \vec{u} + \rho \epsilon_k \vec{u}) + \rho \vec{u} \cdot \vec{g} + \vec{\nabla} \cdot F_T + \mathcal{S} \quad (197)$$

$$\partial_t \rho h + \left[- \vec{\nabla} \cdot (\rho \epsilon_k \vec{u}) - \vec{\nabla} \cdot (P \vec{u}) + P (\vec{\nabla} \cdot \vec{u}) + \rho \vec{u} \cdot \vec{g} + \nabla_i u_j \tau_{ji} \right] - \left[- \vec{\nabla} \cdot (P \vec{u}) + (1 - \Gamma_1) P \vec{\nabla} \cdot \vec{u} + (\Gamma_3 - 1) (\mathcal{S} + \vec{\nabla} \cdot F_T + \tau_{ij} \partial_j u_i) \right] = \quad (198)$$

$$= - \vec{\nabla} \cdot (\rho h \vec{u} + \rho \epsilon_k \vec{u}) + \rho \vec{u} \cdot \vec{g} + \vec{\nabla} \cdot F_T + \mathcal{S} \quad (199)$$

$$\partial_t \rho h + \left[- \vec{\nabla} \cdot (\rho \epsilon_k \vec{u}) - \vec{\nabla} \cdot (P \vec{u}) + P (\vec{\nabla} \cdot \vec{u}) + \rho \vec{u} \cdot \vec{g} + \nabla_i u_j \tau_{ji} \right] + \textcolor{blue}{\vec{\nabla} \cdot (P \vec{u}) - P \vec{\nabla} \cdot \vec{u} + \Gamma_1 P \vec{\nabla} \cdot \vec{u} - \Gamma_3 (\mathcal{S} + \vec{\nabla} \cdot F_T) + (\mathcal{S} + \vec{\nabla} \cdot F_T) -} = \quad (200)$$

$$- (\Gamma_3 - 1) \tau_{ij} \partial_j u_i = - \vec{\nabla} \cdot (\rho h \vec{u} + \rho \epsilon_k \vec{u}) + \rho \vec{u} \cdot \vec{g} + \vec{\nabla} \cdot F_T + \mathcal{S} \quad (201)$$

So, from the above we have:

$$\partial_t \rho h + \nabla_i u_j \tau_{ji} + \Gamma_1 P \vec{\nabla} \cdot \vec{u} - \Gamma_3 \mathcal{S} - \Gamma_3 \vec{\nabla} \cdot F_T - (\Gamma_3 - 1) \tau_{ij} \partial_j u_i = -\vec{\nabla} \cdot (\rho h \vec{u}) \quad (202)$$

$$\rho D_t h = -\Gamma_1 P \vec{\nabla} \cdot \vec{u} + \Gamma_3 \mathcal{S} + \Gamma_3 \vec{\nabla} \cdot F_T - \nabla_i u_j \tau_{ji} + (\Gamma_3 - 1) \tau_{ij} \partial_j u_i \quad (203)$$

$$\bar{\rho} \tilde{D}_t \tilde{h} = -\nabla_r f_h - \Gamma_1 \bar{P} \bar{d} - \Gamma_1 W_P + \Gamma_3 \mathcal{S} + \Gamma_3 \nabla_r f_T - \nabla_r \bar{u}_j \tau_{jr} + (\Gamma_3 - 1) \bar{\tau}_{ij} \partial_j u_i \quad (204)$$

$$\bar{\rho} \tilde{D}_t \tilde{h} = -\nabla_r (f_h + f_\tau) - \Gamma_1 \bar{P} \bar{d} - \Gamma_1 W_P + \Gamma_3 \mathcal{S} + \Gamma_3 \nabla_r f_T + (\Gamma_3 - 1) \varepsilon_k \quad (205)$$

21.10 Mean temperature equation

We begin by deriving 3D instantaneous temperature equation and then apply "ensemble" (space-time) averaging (Sect.1):

$$dT = \frac{\partial T}{\partial \rho} \Big|_{\epsilon_I} d\rho + \frac{\partial T}{\partial \epsilon_I} \Big|_\rho d\epsilon_I = \left(\frac{T}{\rho} (\Gamma_3 - 1) - \frac{P}{\rho^2} \frac{1}{c_v} \right) d\rho + \frac{1}{c_v} d\epsilon_I \quad (206)$$

$$D_t T = + \frac{T}{\rho} (\Gamma_3 - 1) D_t \rho - \frac{P}{\rho^2} \frac{1}{c_v} D_t \rho + \frac{1}{c_v} D_t \epsilon_I \quad (207)$$

$$D_t T = - \frac{T}{\rho} (\Gamma_3 - 1) (\rho d) + \frac{P}{\rho^2} \frac{1}{c_v} (\rho d) + \frac{1}{c_v} \left(-\frac{Pd}{\rho} + \frac{\nabla \cdot F_T}{\rho} + \frac{\tau_{ij} \partial_j u_i}{\rho} + \frac{\mathcal{S}}{\rho} \right) \quad (208)$$

$$D_t T = -(\Gamma_3 - 1) T d + \frac{\nabla \cdot F_T}{c_v \rho} + \frac{\tau_{ij} \partial_j u_i}{c_v \rho} + \frac{\mathcal{S}}{c_v \rho} \quad (209)$$

$$\partial_t T = -u_n \partial_n T - (\Gamma_3 - 1) T d + \frac{\nabla \cdot F_T}{c_v \rho} + \frac{\tau_{ij} \partial_j u_i}{c_v \rho} + \frac{\mathcal{S}}{c_v \rho} \quad (210)$$

$$\partial_t T = - \left(\frac{1}{r^2} \partial_r (r^2 [T u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [T u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [T u_\phi] \right) + T d - (\Gamma_3 - 1) T d + \frac{\nabla \cdot F_T}{c_v \rho} + \frac{\tau_{ij} \partial_j u_i}{c_v \rho} + \frac{\mathcal{S}}{c_v \rho} \quad (211)$$

$$\partial_t \bar{T} = - \left(\frac{1}{r^2} \partial_r (r^2 [\bar{T} u_r]) + \overbrace{\frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\bar{T} u_\theta]) + \frac{1}{r \sin \theta} \partial_\phi [\bar{T} u_\phi]}^{0} \right) + \bar{T} d - (\Gamma_3 - 1) \bar{T} d + \frac{\nabla \cdot F_T}{c_v \rho} + \frac{\tau_{ij} \partial_j u_i}{c_v \rho} + \frac{\mathcal{S}}{c_v \rho} \quad (212)$$

$$\partial_t \bar{T} = -\nabla_r \bar{T} \bar{u}_r - \nabla_r f_T + \bar{T} d - \Gamma_3 \bar{T} d + \bar{T} d + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (213)$$

$$\bar{u}_r \partial_r \bar{T} = -\bar{T} \bar{d} - \nabla_r f_T + \bar{T} d - \Gamma_3 \bar{T} d + \bar{T} d + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (214)$$

$$\bar{D}_t \bar{T} = -\bar{T} \bar{d} - \nabla_r f_T + \bar{T} d - \Gamma_3 \bar{T} d + \bar{T} d + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (215)$$

$$\bar{D}_t \bar{T} = -\bar{T} \bar{d} - \nabla_r f_T + \bar{T} d - \Gamma_3 \bar{T} d + \bar{T} \bar{d} + \overline{T' d'} + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (216)$$

$$\bar{D}_t \bar{T} = -\nabla_r f_T + \bar{T} d - \Gamma_3 \bar{T} d + \bar{T}' d' + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (217)$$

$$\bar{D}_t \bar{T} = -\nabla_r f_T + \bar{T} \bar{d} + \bar{T}' d' - \Gamma_3 (\bar{T} \bar{d} + \bar{T}' d') + \bar{T}' d' + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (218)$$

$$\bar{D}_t \bar{T} = -\nabla_r f_T + (1 - \Gamma_3) \bar{T} \bar{d} + (2 - \Gamma_3) \bar{T}' d' + \overline{(\nabla \cdot F_T)/(c_v \rho)} + \overline{(\tau_{ij} \partial_j u_i)/(c_v \rho)} + \overline{\mathcal{S}/(c_v \rho)} \quad (219)$$

21.11 Mean angular momentum equation (z-component)

Z component of the specific angular momentum is defined as $j_z = r \sin \theta u_\phi$. We begin by multiplying the instantaneous 3D azimuthal momentum equation by $r \sin \theta$, neglect viscosity and ϕ component of gravity and obtain (Sect.1):

$$r \sin \theta \partial_t (\rho u_\phi) = -r \sin \theta \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_\phi u_r - \tau_{\phi r}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta u_\phi - \tau_{\theta \phi}]) + \frac{1}{r \sin \theta} \partial_\phi ([\rho u_\phi^2 - \tau_{\phi \phi}]) + G_\phi^M + \frac{1}{r \sin \theta} \partial_\phi P \right) - \cancel{-r \sin \theta \rho \frac{1}{r \sin \theta} \partial_\phi \Phi}^0 \quad (220)$$

$$r \sin \theta \partial_t (\rho u_\phi) = -r \sin \theta \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_\phi u_r]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta u_\phi]) + \frac{1}{r \sin \theta} \partial_\phi ([\rho u_\phi^2]) + G_\phi^M + \frac{1}{r \sin \theta} \partial_\phi P \right) \quad (221)$$

$$\partial_t \rho j_z = -\frac{1}{r^2} \partial_r (r^2 \rho j_z u_r) - \frac{1}{r \sin \theta} \partial_\theta (\sin \theta \rho j_z u_\theta) - \frac{1}{r \sin \theta} \partial_\phi (\rho j_z u_\phi) - \partial_\phi P \quad (222)$$

$$\partial_t \overline{\rho j_z} = -\frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z u_r}) - \cancel{\frac{1}{r \sin \theta} \partial_\theta (\sin \theta \overline{\rho j_z u_\theta})}^0 - \cancel{\frac{1}{r \sin \theta} \partial_\phi (\overline{\rho j_z u_\phi})}^0 - \cancel{\partial_\phi \overline{P}}^0 \quad (223)$$

$$\partial_t \overline{\rho j_z} = -\frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z u_r}) \quad (224)$$

$$\partial_t \overline{\rho j_z} = -\frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z} \widetilde{u_r}) - \frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z''} \widetilde{u_r''}) \quad (225)$$

$$\partial_t \overline{\rho j_z} + \frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z} \widetilde{u_r}) = -\frac{1}{r^2} \partial_r (r^2 \overline{\rho j_z''} \widetilde{u_r''}) \quad (226)$$

$$\overline{\rho D_t j_z} = -\nabla_r f_{j_z} \quad (227)$$

21.12 Mean α equation

We begin by 3D instantaneous composition equation and then apply "ensemble" (space-time) averaging (Sect.1):

$$\partial_t (\rho X_\alpha) = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r X_\alpha]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta X_\alpha]) + \frac{1}{r \sin \theta} \partial_\phi [\rho u_\phi X_\alpha] \right) + \rho \dot{X}_\alpha^{\text{nuc}} \quad \alpha = 1 \dots N_{\text{nuc}} \quad (228)$$

$$\partial_t \overline{\rho X_\alpha} = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r X_\alpha]) + \cancel{\frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\rho u_\theta X_\alpha])}^0 + \cancel{\frac{1}{r \sin \theta} \partial_\phi [\rho u_\phi X_\alpha]}^0 \right) + \overline{\rho \dot{X}_\alpha^{\text{nuc}}} \quad (229)$$

$$\partial_t \overline{\rho \widetilde{X}_\alpha} = -\frac{1}{r^2} \partial_r (r^2 [\overline{\rho u_r} \widetilde{X}_\alpha + \overline{\rho u_r''} \widetilde{X}_\alpha'']) + \overline{\rho \widetilde{X}_\alpha}^{\text{nuc}} \quad (230)$$

$$\partial_t \overline{\rho \widetilde{X}_\alpha} + \frac{1}{r^2} \partial_r (r^2 [\overline{\rho u_r} \widetilde{X}_\alpha]) = -\frac{1}{r^2} \partial_r (\overline{\rho u_r''} \widetilde{X}_\alpha'') + \overline{\rho \widetilde{X}_\alpha}^{\text{nuc}} \quad (231)$$

$$\overline{\rho D_t \widetilde{X}_\alpha} = -\nabla_r f_\alpha + \overline{\rho \widetilde{X}_\alpha}^{\text{nuc}} \quad (232)$$

21.13 Mean number of nucleons per isotope (A) equation

We begin by deriving 3D instantaneous A equation and then apply "ensemble" (space-time) averaging (Sect.1):

$$A = + \left(\sum_{\alpha} \frac{X_{\alpha}}{A_{\alpha}} \right)^{-1} \quad (233)$$

$$D_t A = + D_t \left(\sum_{\alpha} \frac{X_{\alpha}}{A_{\alpha}} \right)^{-1} = + D_t \frac{1}{\sum_{\alpha} (X_{\alpha}/A_{\alpha})} = - \frac{D_t \sum_{\alpha} (X_{\alpha}/A_{\alpha})}{[\sum_{\alpha} (X_{\alpha}/A_{\alpha})]^2} = - A^2 D_t \sum_{\alpha} \frac{X_{\alpha}}{A_{\alpha}} \quad (234)$$

$$D_t A = - A^2 D_t \sum_{\alpha} \frac{X_{\alpha}}{A_{\alpha}} = - A^2 \sum_{\alpha} \frac{A_{\alpha} D_t X_{\alpha} - X_{\alpha} D_t A_{\alpha}}{A_{\alpha}^2} = - A^2 \sum_{\alpha} \frac{A_{\alpha} D_t X_{\alpha}}{A_{\alpha}^2} \quad (235)$$

$$D_t A = - A^2 \sum_{\alpha} \frac{A_{\alpha} D_t X_{\alpha}}{A_{\alpha}^2} = - A^2 \sum_{\alpha} \frac{A_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}^2} = - A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (236)$$

$$\rho D_t A = - \rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (237)$$

$$\partial_t \rho A = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r A]) + \frac{1}{r \sin \theta} \partial_{\theta} (\sin \theta [\rho u_{\theta} A]) + \frac{1}{r \sin \theta} \partial_{\phi} [\rho u_{\phi} A] \right) - \rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (238)$$

$$\partial_t \overline{\rho A} = - \left(\overline{\frac{1}{r^2} \partial_r (r^2 [\rho u_r A])} + \overline{\frac{1}{r \sin \theta} \partial_{\theta} (\sin \theta [\rho u_{\theta} A])} + \overline{\frac{1}{r \sin \theta} \partial_{\phi} [\rho u_{\phi} A]} \right) - \rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (239)$$

$$\partial_t \overline{\rho A} = - \frac{1}{r^2} \partial_r (r^2 [\overline{\rho u_r A}]) - \overline{\rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}}} \quad (240)$$

$$\partial_t \widetilde{\rho A} = - \frac{1}{r^2} \partial_r (r^2 [\widetilde{\rho u_r A}]) - \overline{\rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}}} \quad (241)$$

$$\partial_t \widetilde{\rho A} = - \frac{1}{r^2} \partial_r (r^2 [\widetilde{\rho u_r A}]) - \frac{1}{r^2} \partial_r (r^2 [\widetilde{\rho u_r' A'}]) - \overline{\rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}}} \quad (242)$$

$$\partial_t \widetilde{\rho A} + \frac{1}{r^2} \partial_r (r^2 [\widetilde{\rho u_r A}]) = - \frac{1}{r^2} \partial_r (r^2 [\widetilde{\rho u_r' A'}]) - \overline{\rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}}} \quad (243)$$

$$\rho \widetilde{D}_t \widetilde{A} = - \nabla_r f_A - \overline{\rho A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}}} \quad (244)$$

21.14 Mean charge per isotope (Z) equation

We begin by deriving 3D instantaneous Z equation and then apply "ensemble" (space-time) averaging (Sect.1):

$$Z = + A \sum_{\alpha} \frac{Z_{\alpha} A_{\alpha}}{A_{\alpha}} \quad (245)$$

$$D_t Z = + D_t \left(A \sum_i \frac{Z_{\alpha} A_{\alpha}}{A_{\alpha}} \right) = \sum_{\alpha} \frac{Z_{\alpha} X_{\alpha}}{A_{\alpha}} D_t A + A \sum_{\alpha} D_t \frac{Z_{\alpha} X_{\alpha}}{A_{\alpha}} \quad (246)$$

$$D_t Z = - \sum_{\alpha} \frac{Z_{\alpha} X_{\alpha}}{A_{\alpha}} A^2 \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + A \sum_{\alpha} \frac{A_{\alpha} D_t Z_{\alpha} X_{\alpha} - Z_{\alpha} X_{\alpha} D_t A_{\alpha}}{A_{\alpha}^2} \quad (247)$$

$$D_t Z = - Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + A \sum_{\alpha} \frac{A_{\alpha} D_t Z_{\alpha} X_{\alpha}}{A_{\alpha}^2} \quad (248)$$

$$D_t Z = - Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + A \sum_{\alpha} \frac{Z_{\alpha} D_t X_{\alpha} + X_{\alpha} D_t Z_{\alpha}}{A_{\alpha}^2} \quad (249)$$

$$D_t Z = - Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (250)$$

$$\rho D_t Z = - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (251)$$

$$\partial_t \rho \bar{Z} = - \left(\frac{1}{r^2} \partial_r (r^2 [\rho u_r Z]) + \frac{1}{r \sin \theta} \partial_{\theta} (\sin \theta [\rho u_{\theta} Z]) + \frac{1}{r \sin \theta} \partial_{\phi} [\rho u_{\phi} Z] \right) \overset{0}{\longrightarrow} - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (252)$$

$$\partial_t \rho \bar{Z} = - \frac{1}{r^2} \partial_r (r^2 [\rho u_r \bar{Z}]) - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (253)$$

$$\partial_t \bar{\rho} \tilde{Z} = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}_r \tilde{Z}]) - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (254)$$

$$\partial_t \bar{\rho} \tilde{Z} = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}_r \tilde{Z}]) - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}'_r \tilde{Z}'']) - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (255)$$

$$\partial_t \bar{\rho} \tilde{Z} + \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}_r \tilde{Z}]) = - \frac{1}{r^2} \partial_r (r^2 [\bar{\rho} \tilde{u}'_r \tilde{Z}'']) - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (256)$$

$$\bar{\rho} \tilde{D}_t \tilde{Z} = - \nabla_r f_Z - \rho Z A \sum_{\alpha} \frac{\dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} + \rho A \sum_{\alpha} \frac{Z_{\alpha} \dot{X}_{\alpha}^{\text{nuc}}}{A_{\alpha}} \quad (257)$$

21.15 Mean entropy equation

We can derive the mean entropy equation in the following way (Sect.1):

$$\rho D_t s = + (\nabla \cdot F_T + \mathcal{S} + \varepsilon_k) / T \quad (258)$$

$$\partial_t \rho s + \nabla_r (\rho s u_r) = + (\nabla \cdot F_T + \mathcal{S} + \varepsilon_k) / T \quad (259)$$

$$\partial_t \bar{\rho} \bar{s} + \nabla_r \bar{\rho} \bar{u}_r \bar{s} = + \overline{(\nabla \cdot F_T + \mathcal{S} + \varepsilon_k) / T} \quad (260)$$

$$\partial_t \bar{\rho} \bar{s} + \nabla_r (\bar{\rho} \bar{u}_r \bar{s}) = - \nabla_r (\bar{\rho} \bar{s}'' \bar{u}_r'') + \overline{\nabla \cdot F_T / T} + \overline{\mathcal{S} / T} + \overline{\varepsilon_k / T} \quad (261)$$

$$\bar{\rho} \tilde{D}_t \tilde{s} = - \nabla_r f_s + \overline{\nabla \cdot F_T / T} + \overline{\mathcal{S} / T} + \overline{\varepsilon_k / T} \quad (262)$$

22 General formula for second and third order moments and variances

22.1 Second-order moments

In order to calculate evolution equations for correlations of two arbitrary fluctuations, we can derive the following general formula.

$$\begin{aligned} \bar{\rho} \widetilde{D}_t c'' d''' - \overline{\rho D_t c'' d'''} &= \bar{\rho} (\partial_t \widetilde{c'' d'''} + \widetilde{u}_n \partial_n \widetilde{c'' d'''}) - \overline{\rho (\partial_t c'' d''' + u_n \partial_n c'' d''')} = \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} - \overline{\rho \partial_t c'' d'''} - \overline{\rho u_n \partial_n c'' d'''} = \\ &= \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} - (\overline{\partial_t \rho c'' d'''} - \overline{c'' d''' \partial_t \rho}) - \overline{\rho u_n \partial_n c'' d'''} = \end{aligned} \quad (263)$$

$$= \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} - \partial_t \bar{\rho} \widetilde{c'' d'''} - \overline{c'' d''' \partial_n \rho u_n} - \overline{\rho u_n \partial_n c'' d'''} = \quad (264)$$

$$= \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} - (\bar{\rho} \partial_t \widetilde{c'' d'''} + \widetilde{c'' d''' \partial_t \rho}) - \overline{c'' d''' \partial_n \rho u_n} - \overline{\rho u_n \partial_n c'' d'''} = \quad (265)$$

$$= \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} - (\bar{\rho} \partial_t \widetilde{c'' d'''} - \widetilde{c'' d''' \partial_n \bar{\rho} \widetilde{u}_n}) - \overline{c'' d''' \partial_n \rho u_n} - \overline{\rho u_n \partial_n c'' d'''} = \quad (266)$$

$$= \bar{\rho} \partial_t \widetilde{c'' d'''} - \bar{\rho} \partial_t \widetilde{c'' d'''} + \bar{\rho} \widetilde{u}_n \partial_n \widetilde{c'' d'''} + \widetilde{c'' d''' \partial_n \bar{\rho} \widetilde{u}_n} - \overline{\partial_n \rho u_n c'' d'''} = \quad (267)$$

$$= \partial_n \bar{\rho} \widetilde{u}_n \widetilde{c'' d'''} - (\overline{\partial_n \rho \widetilde{u}_n c'' d'''} + \overline{\partial_n \rho u_n'' c'' d'''}) = -\overline{\partial_n \rho u_n'' c'' d'''} \quad (268)$$

$$\bar{\rho} \widetilde{D}_t \widetilde{c'' d'''} = \overline{\rho D_t c'' d'''} - \overline{\partial_n \rho u_n'' c'' d'''} = \overline{c'' \rho D_t d'''} + \overline{d''' \rho D_t c''} - \overline{\partial_n \rho u_n'' c'' d'''} \quad (269)$$

$$\rho D_t c'' = \rho D_t c - \rho D_t \tilde{c} = \rho D_t c - \rho \widetilde{D}_t \tilde{c} - \rho u_n'' \partial_n \tilde{c} = \rho D_t c - \frac{\rho}{\bar{\rho}} [\bar{\rho} \widetilde{D}_t \tilde{c}] - \rho u_n'' \partial_n \tilde{c} \quad (270)$$

$$\rho D_t d'' = \rho D_t d - \rho D_t \tilde{d} = \rho D_t d - \rho \widetilde{D}_t \tilde{d} - \rho u_n'' \partial_n \tilde{d} = \rho D_t d - \frac{\rho}{\bar{\rho}} [\bar{\rho} \widetilde{D}_t \tilde{d}] - \rho u_n'' \partial_n \tilde{d} \quad (271)$$

$$\bar{\rho} \widetilde{D}_t \widetilde{c'' d'''} = \overline{c'' \left(\rho D_t d - \frac{\rho}{\bar{\rho}} [\bar{\rho} \widetilde{D}_t \tilde{d}] - \rho u_n'' \partial_n \tilde{d} \right)} + \overline{d''' \left(\rho D_t c - \frac{\rho}{\bar{\rho}} [\bar{\rho} \widetilde{D}_t \tilde{c}] - \rho u_n'' \partial_n \tilde{c} \right)} - \overline{\partial_n \rho c'' d''' u_n''} \quad (272)$$

$$\bar{\rho} \widetilde{D}_t \widetilde{c'' d'''} = +\overline{c'' \rho D_t d} - \overline{\rho c'' u_n'' \partial_n \tilde{d}} + \overline{d''' \rho D_t c} - \overline{\rho d''' u_n'' \partial_n \tilde{c}} - \overline{\partial_n \rho c'' d''' u_n''} \quad (273)$$

22.2 Third-order moments

In order to calculate evolution equations for correlations of three arbitrary fluctuations, we can derive the following general formula.

$$\bar{\rho} \tilde{D}_t c'' \widetilde{d''} e'' - \overline{\rho D_t c'' d'' e''} = \bar{\rho} (\partial_t c'' \widetilde{d''} e'' + \tilde{u}_n \partial_n c'' \widetilde{d''} e'') - \overline{\rho (\partial_t c'' d'' e'' + u_n \partial_n c'' d'' e'')} = \quad (274)$$

$$= \bar{\rho} \partial_t c'' \widetilde{d''} e'' + \bar{\rho} \tilde{u}_n \partial_n c'' \widetilde{d''} e'' - \overline{\rho \partial_t c'' d'' e''} - \overline{\rho u_n \partial_n c'' d'' e''} = \quad (275)$$

$$= \bar{\rho} \partial_t c'' \widetilde{d''} e'' + \bar{\rho} \tilde{u}_n \partial_n c'' \widetilde{d''} e'' - (\partial_t \rho c'' \widetilde{d''} e'' - \overline{c'' d'' e'' \partial_t \rho}) - \overline{\rho u_n \partial_n c'' d'' e''} = \quad (276)$$

$$= \bar{\rho} \partial_t c'' \widetilde{d''} e'' + \bar{\rho} \tilde{u}_n \partial_n c'' \widetilde{d''} e'' - \partial_t \bar{\rho} c'' \widetilde{d''} e'' - (\overline{c'' d'' e'' \partial_n \rho u_n} + \overline{\rho u_n \partial_n c'' d'' e''}) = \quad (277)$$

$$= \bar{\rho} \partial_t c'' \widetilde{d''} e'' + \bar{\rho} \tilde{u}_n \partial_n c'' \widetilde{d''} e'' - (\bar{\rho} \partial_t c'' \widetilde{d''} e'' + \overline{c'' d'' e'' \partial_t \bar{\rho}}) - \overline{\partial_n c'' d'' e'' \rho u_n} = \quad (278)$$

$$= \bar{\rho} \tilde{u}_n \partial_n c'' \widetilde{d''} e'' + \overline{c'' d'' e'' \partial_n \bar{\rho} \tilde{u}_n} - \overline{\partial_n c'' d'' e'' \rho \tilde{u}_n} - \overline{\partial_n c'' d'' e'' \rho u_n''} = \quad (279)$$

$$= -\overline{\partial_n c'' d'' e'' \rho u_n''} \quad (280)$$

$$= -\overline{\partial_n c'' d'' e'' \rho u_n''} \quad (281)$$

$$\overline{\rho D_t c'' d'' e''} = \overline{\rho c'' d'' D_t e''} + \overline{\rho c'' e'' D_t d''} + \overline{\rho d'' e'' D_t c''} \quad (282)$$

$$\overline{c'' d'' \rho D_t e''} = \overline{c'' d'' \rho D_t e} - \overline{c'' d'' \rho D_t \tilde{e}} = \overline{c'' d'' \rho D_t e} - \overline{c'' d'' \rho (\partial_t \tilde{e} + u_n \partial_n \tilde{e})} = \quad (283)$$

$$= \overline{c'' d'' \rho D_t e} - \overline{c'' d'' \rho \partial_t \tilde{e}} - \overline{c'' d'' \rho u_n \partial_n \tilde{e}} = \overline{c'' d'' \rho D_t e} - \overline{\rho c'' \widetilde{d''} \partial_t \tilde{e}} - (c'' d'' \rho \tilde{u}_n \partial_n \tilde{e} + \overline{c'' d'' \rho u_n'' \partial_n \tilde{e}}) = \quad (284)$$

$$= \overline{c'' d'' \rho D_t e} - (\overline{\rho c'' \widetilde{d''} \partial_t \tilde{e}} + \overline{\rho c'' \widetilde{d''} \tilde{u}_n \partial_n \tilde{e}}) - \overline{\rho c'' \widetilde{d''} u_n'' \partial_n \tilde{e}} = \quad (285)$$

$$= \overline{c'' d'' \rho D_t e} - \overline{\rho c'' \widetilde{d''} \tilde{D}_t \tilde{e}} - \overline{\rho c'' \widetilde{d''} u_n'' \partial_n \tilde{e}} \quad (286)$$

$$\bar{\rho} \tilde{D}_t c'' \widetilde{d''} e'' = \overline{c'' d'' \rho D_t e} - \overline{\rho c'' \widetilde{d''} \tilde{D}_t \tilde{e}} - \overline{\rho c'' \widetilde{d''} u_n'' \partial_n \tilde{e}} + \quad (287)$$

$$+ \overline{c'' e'' \rho D_t \tilde{d}} - \overline{\rho c'' \widetilde{e''} \tilde{D}_t \tilde{d}} - \overline{\rho c'' \widetilde{e''} u_n'' \partial_n \tilde{d}} + \quad (288)$$

$$+ \overline{d'' e'' \rho D_t c} - \overline{\rho d'' e'' \tilde{D}_t \tilde{c}} - \overline{\rho d'' e'' u_n'' \partial_n \tilde{c}} - \quad (289)$$

$$- \overline{\partial_n c'' d'' e'' \rho u_n''} \quad (290)$$

22.3 Reynolds and Favrian variance

The Reynolds variance can be derived in following way:

$$\tilde{D}_t \overline{c'd'} - \overline{D_t c'd'} = +\partial_t \overline{c'd'} + \tilde{u}_n \partial_n \overline{c'd'} - (\partial_t \overline{c'd'} + \overline{u_n} \partial_n \overline{c'd'}) = \quad (291)$$

$$= +\partial_t \overline{c'd'} + \tilde{u}_n \partial_n \overline{c'd'} - \partial_t \overline{c'd'} - \tilde{u}_n \partial_n \overline{c'd'} - \overline{u''_n} \partial_n \overline{c'd'} = \quad (292)$$

$$= -\overline{u''_n} \partial_n \overline{c'd'} \quad (293)$$

Next step:

$$\tilde{D}_t \overline{c'd'} = \overline{D_t c'd'} - \overline{u''_n} \partial_n \overline{c'd'} = \overline{c'D_t d'} + \overline{d'D_t c'} - \overline{u''_n} \partial_n \overline{c'd'} \quad (294)$$

Next step:

$$D_t c' = D_t c - D_t \bar{c} = D_t c - \tilde{D}_t \bar{c} - u''_n \partial_n \bar{c} \quad (295)$$

$$D_t d' = D_t d - D_t \bar{c} = D_t d - \tilde{D}_t \bar{d} - u''_n \partial_n \bar{d} \quad (296)$$

Now let's put these equations in the Equation 294:

$$\tilde{D}_t \overline{c'd'} = +\overline{c'D_t d'} + \overline{d'D_t c'} - \overline{u''_n} \partial_n \overline{c'd'} = \quad (297)$$

$$= +\overline{c'(D_t d - \tilde{D}_t \bar{d} - u''_n \partial_n \bar{d})} + \overline{d'(D_t c - \tilde{D}_t \bar{c} - u''_n \partial_n \bar{c})} - \overline{u''_n} \partial_n \overline{c'd'} = \quad (298)$$

$$= +\overline{c'D_t d} - \overline{c'u''_n} \partial_n \bar{d} + \overline{d'D_t c} - \overline{d'u''_n} \partial_n \bar{c} - \overline{u''_n} \partial_n \overline{c'd'} = \quad (299)$$

$$= +\overline{c'D_t d} - \overline{c'u''_n} \partial_n \bar{d} + \overline{d'D_t c} - \overline{d'u''_n} \partial_n \bar{c} - \overline{\partial_n u''_n} \overline{c'd'} + \overline{c'd' \partial_n u''_n} \quad (300)$$

From this general formula by substituting $d = c$ we get:

$$\tilde{D}_t \overline{c'c'} = +2\overline{c'D_t c} - 2\overline{c'u''_n} \partial_n \bar{c} - \overline{u''_n} \partial_n \overline{c'c'} = \quad (301)$$

$$= +2\overline{c'D_t c} - 2\overline{c'u''_n} \partial_n \bar{c} - \overline{\partial_n u''_n} \overline{c'c'} + \overline{c'c' \partial_n u''_n} \quad (302)$$

The Favrian variance can be easily derived from general equation for second-order moments Equation 273 ie.

$$\overline{\rho} \widetilde{D}_t \widetilde{c''d''} = +\overline{c''} \overline{\rho D_t d} - \overline{\rho c''} \overline{u''_n} \partial_n \widetilde{d} + \overline{d''} \overline{\rho D_t c} - \overline{\rho d''} \overline{u''_n} \partial_n \widetilde{c} - \overline{\partial_n \rho c''} \overline{d''} \overline{u''_n} \quad (303)$$

Now, substitute $d = c$ and you'll get the equation for Favrian variance:

$$\overline{\rho} \widetilde{D}_t \widetilde{c''c''} = +2\overline{c''} \overline{\rho D_t c} - 2\overline{\rho c''} \overline{u''_n} \partial_n \widetilde{c} - \overline{\partial_n \rho c''} \overline{c''} \overline{u''_n} \quad (304)$$

23 Derivation of second-order moments equations

23.1 Reynolds stress equation

We can derive the Reynolds stress equation using the general formula for second order moments, where we substitute c'' with u_i'' and d'' with u_j'' .

$$\bar{\rho} \widetilde{D}_t \widetilde{c''d''} = \overline{c'' \rho D_t d} - \bar{\rho} \widetilde{c'' u_n'' \partial_n d} + \overline{d'' \rho D_t c} - \bar{\rho} \widetilde{d'' u_n'' \partial_n c} - \overline{\partial_n \rho c'' d'' u_n''} \quad (305)$$

$$\underbrace{\bar{\rho} \widetilde{D}_t \widetilde{u_i'' u_j''}}_{\bar{\rho} \widetilde{D}_t (\widetilde{R}_{ij}/\bar{\rho})} = \overline{u_i'' \rho D_t u_j} - \underbrace{\bar{\rho} \widetilde{u_i'' u_n'' \partial_n \tilde{u}_j}}_{\widetilde{R}_{in} \partial_n \tilde{u}_j} + \overline{u_j'' \rho D_t u_i} - \underbrace{\bar{\rho} \widetilde{u_j'' u_n'' \partial_n \tilde{u}_i}}_{\widetilde{R}_{jn} \partial_n \tilde{u}_i} - \underbrace{\overline{\nabla \cdot \rho u_i'' u_j'' u_n''}}_{\nabla \cdot \rho u_i'' u_j'' u_n''} \quad (306)$$

So, the general formula for Reynolds stress \widetilde{R}_{ij} is:

$$\bar{\rho} \widetilde{D}_t (\widetilde{R}_{ij}/\bar{\rho}) = - \left(\widetilde{R}_{in} \partial_n \tilde{u}_j + \widetilde{R}_{jn} \partial_n \tilde{u}_i \right) - \left(\nabla_r \bar{\rho} u_i'' \widetilde{u_j'' u_r''} + \overline{G_{rr}^R} \right) + \overline{u_i'' \rho D_t u_j} + \overline{u_j'' \rho D_t u_i} \quad (307)$$

Mean equation for \widetilde{R}_{rr}

$$\bar{\rho} \widetilde{D}_t (\widetilde{R}_{rr}/\bar{\rho}) = - \left(\widetilde{R}_{rn} \partial_n \tilde{u}_r + \widetilde{R}_{rn} \partial_n \tilde{u}_r \right) - \left(\nabla_r 2 f_k^r + \overline{G_{rr}^R} \right) + 2 \overline{u_r'' \rho D_t u_r} \quad (308)$$

where

$$\overline{u_r'' \rho D_t u_r} = \overline{u_r'' \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\tau_{r\phi}]) - G_r^M - \partial_r P + \rho g_r \right)} \quad (309)$$

$$\overline{u_r'' \rho D_t u_r} = \overline{u_r'' (\nabla_r \tau_{rr} + \nabla_\theta \tau_{r\theta} + \nabla_\phi \tau_{r\phi} - G_r^M - \partial_r P + \rho g_r)} \quad (310)$$

Some terms can be further manipulated in following way:

$$+ \overline{u''_r \nabla_r \tau_{rr}} = \overline{u''_r} \overline{\nabla_r \tau_{rr}} + \overline{u''_r \nabla_r \tau'_{rr}} = \cancel{\overline{u''_r} \cancel{\nabla_r \tau_{rr}}}^0 + \nabla_r (\overline{u''_r \tau'_{rr}}) - \overline{\tau'_{rr}} \partial_r \overline{u''_r} \quad (311)$$

$$+ \overline{u''_r \nabla_\theta \tau_{r\theta}} = \cancel{\overline{u''_r} \cancel{\nabla_\theta \tau_{r\theta}}}^0 + \overline{u''_r \nabla_\theta \tau'_{r\theta}} = \cancel{\overline{\nabla_\theta (u''_r \tau'_{r\theta})}}^0 - \overline{\tau'_{r\theta}} \frac{1}{r} \partial_\theta \overline{u''_r} \quad (312)$$

$$+ \overline{u''_r \nabla_\phi \tau_{r\phi}} = \cancel{\overline{u''_r} \cancel{\nabla_\phi \tau_{r\phi}}}^0 + \overline{u''_r \nabla_\phi \tau'_{r\phi}} = \cancel{\overline{\nabla_\phi (u''_r \tau'_{r\phi})}}^0 - \overline{\tau'_{r\phi}} \frac{1}{r \sin \theta} \partial_\phi \overline{u''_r} \quad (313)$$

$$- \overline{u''_r G_r^M} = - \overline{u''_r G_r^M} \quad (314)$$

$$- \overline{u''_r \partial_r \bar{P}} = - \overline{u''_r \partial_r \bar{P}} - \overline{u''_r \partial_r \bar{P}'} = - \overline{u''_r \partial_r \bar{P}} - \nabla_r (\overline{u''_r P'}) + \overline{P' \nabla_r u''_r} \quad (315)$$

$$+ \overline{u''_r \rho g_r} \sim \overline{u''_r \rho g_r} = 0 \quad (316)$$

Final equation is:

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{rr}/\bar{\rho} \right) = - 2 \tilde{R}_{rr} \partial_r \tilde{u}_r - \nabla_r \tilde{F}_{rrr}^R - \overline{G_{rr}^R} + 2 \nabla_r (\overline{u''_r \tau'_{rr}}) - 2 \overline{u''_r G_r^M} - 2 \overline{u''_r \partial_r \bar{P}} - 2 \nabla_r (\overline{u''_r P'}) + 2 \overline{P' \nabla_r u''_r} - \quad (317)$$

$$- 2 \left(\overline{\tau'_{rr} \partial_r u''_r} + \overline{\tau'_{r\theta}} \frac{1}{r} \partial_\theta \overline{u''_r} + \overline{\tau'_{r\phi}} \frac{1}{r \sin \theta} \partial_\phi \overline{u''_r} \right)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{rr}/\bar{\rho} \right) = - \nabla_r (2f_k^r + 2f_P + 2f_\tau^r) + 2W_b - 2 \tilde{R}_{rr} \partial_r \tilde{u}_r + 2 \overline{P' \nabla_r u''_r} - 2 \overline{u''_r G_r^M} - \overline{G_{rr}^R} - 2 \varepsilon_k^r \quad (318)$$

Mean equation for $\tilde{R}_{\theta\theta}$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\theta}/\bar{\rho} \right) = - \left(\tilde{R}_{\theta n} \partial_n \tilde{u}_\theta + \tilde{R}_{\theta n} \partial_n \tilde{u}_\theta \right) - \left(\nabla_r 2f_k^\theta - \overline{G_{\theta\theta}^R} \right) + 2 \overline{u'_\theta \rho D_t u_\theta} \quad (319)$$

$$(320)$$

where

$$\overline{u'_\theta \rho D_t u_\theta} = u'_\theta \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{\theta r}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\tau_{\theta\theta}]) + \frac{1}{r \sin \theta} \partial_\phi [\tau_{\theta\phi}] \right) - G_\theta^M - \frac{1}{r} \partial_\theta P + \rho g_\theta \quad (321)$$

$$\overline{u'_\theta \rho D_t u_\theta} = u'_\theta \left(\nabla_r \tau_{\theta r} + \nabla_\theta \tau_{\theta\theta} + \nabla_\phi \tau_{\theta\phi} - G_\theta^M - \frac{1}{r} \partial_\theta P + \rho g_\theta \right) \quad (322)$$

Some terms can be further manipulated in following way:

$$+\overline{u''_r \nabla_r \tau_{\theta r}} = \overline{\cancel{u''_r} \nabla_r \cancel{\tau_{\theta r}}} + \overline{0} - \overline{\tau'_{\theta r} \partial_r u''_\theta} \quad (323)$$

$$+\overline{u''_\theta \nabla_\theta \tau_{\theta\theta}} = -\overline{\tau'_{\theta\theta} \frac{1}{r} \partial_\theta u''_\theta} \quad (324)$$

$$+\overline{u''_\theta \nabla_\phi \tau_{\theta\phi}} = -\overline{\tau'_{\theta\phi} \frac{1}{r \sin \theta} \partial_\phi u''_\theta} \quad (325)$$

$$-\overline{u''_\theta G_\theta^M} = -\overline{u''_\theta G_\theta^M} \quad (326)$$

$$-\overline{u''_\theta \frac{1}{r} \partial_\theta P} = -\overline{u''_\theta \frac{1}{r} \partial_\theta \bar{P}} - \overline{u''_\theta \frac{1}{r} \partial_\theta P'} = -\overline{\cancel{u''_\theta} \frac{1}{r} \partial_\theta \bar{P}} - \overline{\frac{1}{r \sin \theta} \partial_\theta (\sin \theta u''_\theta P')} + \overline{P' \frac{1}{r \sin \theta} \partial_\theta (\sin \theta u''_\theta)} \quad (327)$$

$$+\overline{u''_\theta \rho g_\theta} = 0 \quad (328)$$

Final equation is:

$$\begin{aligned} \bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\theta} / \bar{\rho} \right) = & -2 \tilde{R}_{\theta r} \partial_r \tilde{u}_\theta - \nabla_r 2 f_k^\theta - \overline{G_{\theta\theta}^R} + 2 \nabla_r (\overline{u''_\theta \tau'_{\theta r}}) - 2 \overline{u''_\theta G_\theta^M} + 2 \overline{P' \nabla_\theta u''_\theta} - \\ & - 2 \left(\overline{\tau'_{\theta r} \partial_r u''_\theta} - \overline{\tau'_{\theta\theta} \frac{1}{r} \partial_\theta u''_\theta} - \overline{\tau'_{\theta\phi} \frac{1}{r \sin \theta} \partial_\phi u''_\theta} \right) \end{aligned} \quad (329)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\theta\theta} / \bar{\rho} \right) = -\nabla_r (2 f_k^\theta + 2 f_\tau^\theta) - 2 \tilde{R}_{\theta r} \partial_r \tilde{u}_\theta + 2 \overline{P' \nabla_\theta u''_\theta} - 2 \overline{u''_\theta G_\theta^M} - \overline{G_{\theta\theta}^R} - 2 \varepsilon_k^\theta \quad (330)$$

Mean equation for $\tilde{R}_{\phi\phi}$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi\phi} / \bar{\rho} \right) = - \left(\tilde{R}_{\phi n} \partial_n \tilde{u}_\phi + \tilde{R}_{\phi n} \partial_n \tilde{u}_\phi \right) - \left(\nabla_r 2 f_k^\phi + \overline{G_{\phi\phi}^R} \right) + 2 \overline{u''_\phi \rho D_t u_\phi} \quad (331)$$

where

$$\overline{u''_\phi \rho D_t u_\phi} = \overline{u''_\phi \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{\phi r}]) + \frac{1}{r \sin \phi} \partial_\phi (\sin \phi [\tau_{\phi\theta}]) + \frac{1}{r \sin \phi} \partial_\phi [\tau_{\phi\phi}] - G_\phi^M - \frac{1}{r \sin \theta} \partial_\phi P + \rho g_\phi \right)} \quad (332)$$

$$\overline{u''_\phi \rho D_t u_\phi} = \overline{u''_\phi \left(\nabla_r \tau_{\phi r} + \nabla_\theta \tau_{\phi\theta} + \nabla_\phi \tau_{\phi\phi} - G_\phi^M - \frac{1}{r \sin \theta} \partial_\phi P + \rho g_\phi \right)} \quad (333)$$

Some terms can be further manipulated in following way:

$$+\overline{u''_r \nabla_r \tau_{\phi r}} = \overline{\cancel{u''_r} \nabla_r \tau_{\phi r}}^0 + \nabla_r (\overline{u''_r \tau'_{\phi r}}) - \overline{\tau'_{\phi r} \partial_r u''_\phi} \quad (334)$$

$$+\overline{u''_r \nabla_\theta \tau_{\phi \theta}} = -\overline{\tau'_{\phi \theta} \frac{1}{r} \partial_\theta u''_\phi} \quad (335)$$

$$+\overline{u''_r \nabla_\phi \tau_{\phi \phi}} = -\overline{\tau'_{\phi \phi} \frac{1}{r \sin \theta} \partial_\phi u''_\phi} \quad (336)$$

$$-\overline{u''_r G_\phi^M} = -\overline{u''_r G_\phi^M} \quad (337)$$

$$-\overline{u''_r \frac{1}{r \sin \theta} \partial_\phi P} = -\overline{u''_r \frac{1}{r \sin \theta} \partial_\phi \bar{P}} - \overline{u''_r \frac{1}{r \sin \theta} \partial_\phi P'} = -\overline{\cancel{u''_r} \frac{1}{r \sin \theta} \partial_\phi \bar{P}}^0 - \overline{\cancel{\frac{1}{r \sin \theta} \partial_\phi (u''_r P')}}^0 + \overline{P' \frac{1}{r \sin \theta} \partial_\phi (u''_r)} \quad (338)$$

$$+\overline{u''_r \rho g_\phi} = 0 \quad (339)$$

Final equation is:

$$\begin{aligned} \bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi \phi} / \bar{\rho} \right) = & -2 \tilde{R}_{\phi r} \partial_r \tilde{u}_\phi - \nabla_r 2 f_k^\phi - \overline{G_{\phi \phi}^R} + 2 \nabla_r (\overline{u''_r \tau'_{\phi r}}) - 2 \overline{u''_r G_\phi^M} + 2 \overline{P' \nabla_\phi u''_\phi} - \\ & - 2 \left(\overline{\tau'_{\phi r} \partial_r u''_\phi} - \overline{\tau'_{\phi \theta} \frac{1}{r} \partial_\theta u''_\phi} - \overline{\tau'_{\phi \phi} \frac{1}{r \sin \theta} \partial_\phi u''_\phi} \right) \end{aligned} \quad (340)$$

$$\bar{\rho} \tilde{D}_t \left(\tilde{R}_{\phi \phi} / \bar{\rho} \right) = -\nabla_r (2 f_k^\phi + 2 f_\tau^\phi) - 2 \tilde{R}_{\phi r} \partial_r \tilde{u}_\phi + 2 \overline{P' \nabla_\phi u''_\phi} - 2 \overline{u''_r G_\phi^M} - \overline{G_{\phi \phi}^R} - 2 \varepsilon_k^\phi \quad (341)$$

23.2 Turbulent kinetic energy equations

$$\tilde{k} = +\frac{1}{2}\tilde{R}_{ii}/\bar{\rho} \quad (342)$$

$$\bar{\rho}\tilde{D}_t\tilde{k} = -\nabla_r(f_k + f_P) - \tilde{R}_{ir}\partial_r\tilde{u}_i + W_b + W_P + \mathcal{N}_k \quad (343)$$

$$\tilde{k}^r = +\frac{1}{2}\tilde{R}_{rr}/\bar{\rho} \quad (344)$$

$$\bar{\rho}\tilde{D}_t\tilde{k}^r = -\nabla_r(f_k^r + f_P) - \tilde{R}_{rr}\partial_r\tilde{u}_r + W_b + \overline{P'\nabla_r u''_r} + \mathcal{G}_k^r + \mathcal{N}_{kr} \quad (345)$$

$$\tilde{k}^h = +\tilde{k}_\theta + \tilde{k}_\phi = +\frac{1}{2}(\tilde{R}_{\theta\theta} + \tilde{R}_{\phi\phi})/\bar{\rho} \quad (346)$$

$$\bar{\rho}\tilde{D}_t\tilde{k}^h = -\nabla_r f_k^h - (\tilde{R}_{\theta r}\partial_r\tilde{u}_\theta + \tilde{R}_{\phi r}\partial_r\tilde{u}_\phi) + (\overline{P'\nabla_\theta u''_\theta} + \overline{P'\nabla_\phi u''_\phi}) + \mathcal{G}_k^h + \mathcal{N}_{kh} \quad (347)$$

23.3 Turbulent mass flux equation

The turbulent mass flux equation can be derived in the following way:

$$\rho D_t \tilde{c} - \rho \tilde{D}_t \tilde{c} = \rho \partial_t \tilde{c} + \rho u_n \partial_n \tilde{c} - [\rho \partial_t \tilde{c} + \rho \tilde{u}_n \partial_n \tilde{c}_n] = \rho(u_n - \tilde{u}_n) \partial_n \tilde{c} = \rho u_n'' \partial_n \tilde{c} \quad (348)$$

$$\rho D_t c'' = \rho D_t c - \rho D_t \tilde{c} = \rho D_t c - \rho \tilde{D}_t \tilde{c} - \rho u_n'' \partial_n \tilde{c} = \rho D_t c - \frac{\rho}{\bar{\rho}}[\bar{\rho} \tilde{D}_t \tilde{c}] - \rho u_n'' \partial_n \tilde{c} \quad (349)$$

$$\rho D_t u_r'' = + \left(\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 [\tau_{rr}]) + \frac{1}{r \sin \theta} \frac{\partial}{\partial \theta} (\sin \theta [\tau_{r\theta}]) + \frac{1}{r \sin \theta} \frac{\partial}{\partial \phi} ([\tau_{r\phi}]) - G_r^M - \frac{\partial P}{\partial r} \right) + \rho g_r + \quad (350)$$

$$+ \frac{\rho}{\bar{\rho}} \left(\frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr} - \tau_{rr}) + \overline{G_r^M} + \frac{\partial}{\partial r} \overline{P} - \overline{\rho g_r} \right) - \rho u_n'' \partial_n \tilde{u}_r \quad (351)$$

$$\tilde{D}_t \overline{u_i''} = \overline{D_t u_i'' - u_n'' \partial_n u_i''} = \overline{\partial_t u_i''} + \overline{u_n \partial_n u_i''} - \overline{u_n'' \partial_n u_i''} = \overline{\partial_t u_i''} + \overline{u_n \partial_n u_i''} + \overline{\tilde{u}_n \partial_n u_i''} - \overline{u_n \partial_n u_i''} = \overline{\partial_t u_i''} + \overline{\tilde{u}_n \partial_n u_i''} = \tilde{D}_t \overline{u_i''} \quad (352)$$

$$\bar{\rho} \tilde{D}_t \overline{u_i''} = \frac{\bar{\rho}}{\rho} [\rho D_t u_i''] - \overline{\rho u_n'' \partial_n u_i''} \quad (353)$$

$$\begin{aligned} \bar{\rho} \widetilde{D}_t \bar{u}_r'' &= \frac{\bar{\rho}}{\rho} [\rho D_t u_r''] - \bar{\rho} u_n'' \partial_n \bar{u}_r'' = \\ &= \frac{\bar{\rho}}{\rho} \left[\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau_{rr}) - G_r^M - \frac{\partial}{\partial r} P + \rho g_r + \frac{\rho}{\bar{\rho}} \left(\frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr} - \bar{\tau}_{rr}) + \bar{G}_r^M + \frac{\partial}{\partial r} \bar{P} - \bar{\rho} \tilde{g}_r \right) - \rho u_n'' \partial_n \bar{u}_r \right] - \bar{\rho} u_n'' \partial_n \bar{u}_r'' = \end{aligned} \quad (354)$$

$$= \frac{\bar{\rho}}{\rho} \left[\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau_{rr}) \right] - \left[\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau_{rr}) \right] - \frac{\bar{\rho}}{\rho} G_r^M + \bar{G}_r^M - \frac{\bar{\rho}}{\rho} \left[\frac{\partial}{\partial r} P \right] + \left[\frac{\partial}{\partial r} P \right] + \frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n \bar{u}_r - \bar{\rho} u_n'' \partial_n u_r'' \quad (355)$$

$$= + \frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n u_r'' - \frac{\rho'}{\rho} \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau_{rr}) + \frac{\rho'}{\rho} G_r^M + \frac{\rho'}{\rho} \frac{\partial}{\partial r} P = \quad (357)$$

$$= + \frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n u_r'' - \rho' v \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 (\bar{\tau}_{rr} + \tau'_{rr})) + \rho' v \frac{\partial}{\partial r} (\bar{P} + P') + \rho' v \bar{G}_r^M = \quad (358)$$

$$= + \frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n u_r'' - \rho' v \left(\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \bar{\tau}_{rr}) - \frac{\partial}{\partial r} \bar{P} \right) - \rho' v \left(\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau'_{rr}) - \frac{\partial}{\partial r} P' \right) + \rho' v \bar{G}_r^M = \quad (359)$$

$$= + \frac{1}{r^2} \frac{\partial}{\partial r} r^2 (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n u_r'' + b \left(\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \bar{\tau}_{rr}) - \frac{\partial}{\partial r} \bar{P} \right) - \rho' v \left(\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \tau'_{rr}) - \frac{\partial}{\partial r} P' \right) + \rho' v \bar{G}_r^M = \quad (360)$$

$$= + \nabla_r (\tilde{R}_{rr}) - \bar{\rho} \bar{u}'' \cdot \nabla u_r - b \nabla_r \bar{\tau}_{rr} - b \partial_r \bar{P} + \rho' v \partial_r P' - \rho' v \nabla_r \tau'_{rr} + \rho' v \bar{G}_r^M \quad (361)$$

$$\bar{\rho} \widetilde{D}_t \bar{u}_r'' = + \nabla_r (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n u_r - b \nabla_r \bar{\tau}_{rr} - b \partial_r \bar{P} + \rho' v \partial_r P' - \rho' v \nabla_r \tau'_{rr} + \rho' v \bar{G}_r^M = \quad (362)$$

$$= + \nabla_r (\tilde{R}_{rr}) - \bar{\rho} u_n'' \partial_n \bar{u}_r - \bar{\rho} \partial_n u_n'' \bar{u}' + \bar{\rho} u'_r \partial_n u_n'' - b \partial_r \bar{P} + \rho' v \partial_r P' - \rho' v \nabla_r \tau'_{rr} + \rho' v \bar{G}_r^M = \quad (363)$$

$$= (+ \nabla_r (\tilde{R}_{rr}) - \bar{\rho} \nabla_r u_n'' u'_r) - \bar{\rho} u_n'' \nabla_r \bar{u}_r + \bar{\rho} u'_r d'' - b \partial_r \bar{P} + \rho' v \partial_r P' - \rho' v \nabla_r \tau'_{rr} + \rho' v \bar{G}_r^M = \quad (364)$$

$$= -(\rho' u'_r u'_r / \bar{\rho}) \partial_r \bar{\rho} + (\tilde{R}_{rr} / \bar{\rho}) / \partial_r \bar{\rho} - \bar{\rho} \nabla_r (u_n'' u'_r) + \nabla_r \rho' u'_r u'_r - \bar{\rho} u'_r \nabla_r \bar{u}_r + \bar{\rho} u'_r d'' - b \partial_r \bar{P} + \rho' v \partial_r P' - \rho' v \nabla_r \tau'_{rr} + \rho' v \bar{G}_r^M \quad (365)$$

23.4 Density-specific volume covariance equation

The density-specific volume ($v = 1/\rho$) covariance ($b = -\overline{\rho'v'}$) equation can be derived from the continuity equation in the following way.

$$\partial_t \rho + \partial_n (\rho u_n) = 0 \quad (366)$$

$$\partial_t \bar{\rho} + \bar{u}_n \partial_n \bar{\rho} = -\bar{\rho} \partial_n \bar{u}_n \quad (367)$$

$$\partial_t \bar{\rho} + \bar{u}_n \partial_n \bar{\rho} - \overline{u''_n} \partial_n \bar{\rho} = -\bar{\rho} \partial_n \bar{u}_n + \bar{\rho} \partial_n \overline{u''_n} \quad (368)$$

$$\bar{D}_t \bar{\rho} = +\overline{u''_n} \partial_n \bar{\rho} - \bar{\rho} \partial_n \bar{u}_n + \bar{\rho} \partial_n \overline{u''_n} \quad (369)$$

$$\bar{D}_t \bar{\rho} = +(\overline{u''_n} \partial_n \bar{\rho} + \bar{\rho} \partial_n \overline{u''_n}) - \bar{\rho} \partial_n \bar{u}_n \quad (370)$$

$$\bar{D}_t \bar{\rho} = -\bar{\rho} \partial_n \bar{u}_n + \partial_n (\overline{u''_n} \bar{\rho}) \quad (371)$$

$$\partial_t \rho + \partial_n (\rho u_n) = 0 \quad (372)$$

$$\partial_t (1/v) + \partial_n (u_n/v) = 0 \quad (373)$$

$$-\partial_t v + v \partial_n u_n - u_n \partial_n v = 0 \quad (374)$$

$$\partial_t v - v \partial_n u_n - u_n \partial_n v + u_n \partial_n v + u_n \partial_n v = 0 \quad (375)$$

$$\partial_t v - \partial_n (v u_n) + 2u_n \partial_n v = 0 \quad (376)$$

$$\partial_t \bar{v} - \partial_n (\overline{v u_n}) + 2\overline{u_n} \partial_n \bar{v} = 0 \quad (377)$$

$$\bar{D}_t \bar{v} = +\bar{v} \partial_n \bar{u}_n - \partial_n \overline{u'_n v'} + 2\bar{v}' \partial_n u'_n \quad (378)$$

$$b = -\overline{\rho'v'} = \overline{\rho v} - 1 \quad (379)$$

$$\bar{D}_t b = \bar{\rho} \bar{D}_t \bar{v} + \bar{v} \bar{D}_t \bar{\rho} \quad (380)$$

Using previously derived equations for $\bar{D}_t \bar{v}$ and $\bar{D}_t \bar{\rho}$ we get:

$$\bar{D}_t b = -\bar{\rho} \partial_n \overline{\rho' u'_n} + 2\bar{\rho} \overline{v' \partial_n u'_n} + \bar{v} \partial_n \overline{\rho u''_n} \quad (381)$$

23.5 Mean internal energy flux equation

We can derive the internal energy flux equation using the general formula for second order moments, where we substitute c with ϵ_I and d with u_i .

$$\bar{\rho} \tilde{D}_t \widetilde{c'' d''} = \overline{c'' \rho D_t d} - \bar{\rho} \widetilde{c'' u''_n} \partial_n \widetilde{d} + \overline{d'' \rho D_t c} - \bar{\rho} \widetilde{d'' u''_n} \partial_n \widetilde{c} - \overline{\partial_n \rho c'' d'' u''_n} \quad (382)$$

$$\bar{\rho} \tilde{D}_t (f_I / \bar{\rho}) = \mathcal{N}_{fI} - \nabla_r f_I^r - f_I \partial_r \widetilde{u}_r - \widetilde{R}_{rr} \partial_r \widetilde{\epsilon}_I - \overline{\epsilon_I''} \partial_r \overline{P} - \overline{\epsilon_I''} \partial_r \overline{P'} - \overline{u''_r} \overline{(Pd)} + \overline{u''_r} \overline{(\mathcal{S} + \nabla \cdot f_T)} + \mathcal{G}_I + \mathcal{N}_{fI} \quad (383)$$

23.6 Mean enthalpy flux equation

We can derive the enthalpy flux equation using the general formula for second order moments, where we substitute c with h and d with u_i .

$$\bar{\rho} \tilde{D}_t \tilde{c}'' \tilde{d}'' = \overline{c'' \rho D_t d} - \bar{\rho} \tilde{c}'' \tilde{u}_n'' \partial_n \tilde{d} + \overline{d'' \rho D_t c} - \bar{\rho} \tilde{d}'' \tilde{u}_n'' \partial_n \tilde{c} - \overline{\partial_n \rho c'' d'' u_n''} \quad (384)$$

$$\bar{\rho} \tilde{D}_t (f_h / \bar{\rho}) = -\nabla_r f_h^r - f_h \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{h} - \overline{h'' \partial_r P} - \overline{h'' \partial_r P'} - \Gamma_1 \overline{u_r'' (Pd)} + \Gamma_3 \overline{u_r'' (\mathcal{S} + \nabla \cdot F_T)} + \mathcal{G}_h + \mathcal{N}_h \quad (385)$$

23.7 Mean entropy flux equation

We can derive the entropy flux equation using the general formula for second order moments, where we substitute c with s and d with u_i .

$$\bar{\rho} \tilde{D}_t \tilde{c}'' \tilde{d}'' = \overline{c'' \rho D_t d} - \bar{\rho} \tilde{c}'' \tilde{u}_n'' \partial_n \tilde{d} + \overline{d'' \rho D_t c} - \bar{\rho} \tilde{d}'' \tilde{u}_n'' \partial_n \tilde{c} - \overline{\partial_n \rho c'' d'' u_n''} \quad (386)$$

$$\bar{\rho} \tilde{D}_t (f_s / \bar{\rho}) = -\nabla_r f_s^r - f_s \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{s} - \overline{s'' \partial_r P} - \overline{s'' \partial_r P'} + \overline{u_r'' (\mathcal{S} + \nabla \cdot f_T) / T} + \mathcal{G}_s + \mathcal{N}_{f_s} \quad (387)$$

23.8 Mean composition flux equation in r direction.

We can derive the composition flux equation using the general formula for second order moments, where we substitute c with X_α and d with u_i .

$$\bar{\rho} \tilde{D}_t \tilde{c}'' \tilde{d}'' = \overline{c'' \rho D_t d} - \bar{\rho} \tilde{c}'' \tilde{u}_n'' \partial_n \tilde{d} + \overline{d'' \rho D_t c} - \bar{\rho} \tilde{d}'' \tilde{u}_n'' \partial_n \tilde{c} - \overline{\partial_n \rho c'' d'' u_n''} \quad (388)$$

$$\bar{\rho} \tilde{D}_t (f_\alpha / \bar{\rho}) = -\nabla_r f_\alpha^r - f_\alpha \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_\alpha - \overline{X_\alpha'' \partial_r P} - \overline{X_\alpha'' \partial_r P'} + \overline{u_r'' \rho \dot{X}_\alpha^{\text{nuc}}} + \mathcal{G}_\alpha + \mathcal{N}_{f_\alpha} \quad (389)$$

Please note that the last term $\overline{\partial_n \rho X_i'' u_i'' u_n''} \equiv \overline{\nabla \cdot (\rho X_i'' \mathbf{u}'') \mathbf{u}''}$ is div of 2nd order tensor and $\overline{\nabla \cdot (\rho X_i'' \mathbf{u}'') \mathbf{u}''}(\mathbf{e}_r) = \nabla_r \overline{\rho X_i u_i'' u_r''} - \overline{\rho X_i'' u_\theta'' u_\theta'' / r} - \overline{\rho X_i'' u_\phi'' u_\phi'' / r}$

Further calculation requires the following hydrodynamic equations:

$$\rho D_t (u_r) = + \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\tau_{r\phi}]) - G_r^M - \partial_r P \right) + \rho g_r \quad (391)$$

$$\rho D_t (X_i) = + \rho \dot{X}_i^n \quad i = 1 \dots N_{\text{nuc}} \quad (392)$$

For radial component of the flux, where $u_i = u_r$ and changing order of terms for clarity reasons we get:

$$\bar{\rho} \tilde{D}_t \tilde{X}_i'' \tilde{u}_r'' = \left(-\overline{\partial_n \rho X_i'' u_i'' u_n''} \right) - \bar{\rho} \tilde{X}_i'' \tilde{u}_n'' \partial_n \tilde{u}_r - \bar{\rho} \tilde{u}_r'' \tilde{u}_n'' \partial_n \tilde{X}_i + \overline{X_i'' \rho D_t u_r} + \overline{u_r'' \rho D_t X_i} \quad (393)$$

$$\bar{\rho} \tilde{D}_t (f_i / \bar{\rho}) = \left(-\nabla_r f_i^r - \overline{\rho X_i'' u_\theta'' u_\theta'' / r} - \overline{\rho X_i'' u_\phi'' u_\phi'' / r} \right) - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i + \overline{X_i'' (\nabla \cdot \tau_r - G_r^M - \partial_r P + \rho g_r)} + \overline{u_r'' \rho \dot{X}_i^{\text{nuc}}} \quad (394)$$

Let's reorganize the terms again and split $P = \bar{P} + P'$ to get the equation to shape it has in the paper:

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{X''_i} \rho g_r + u''_r \rho \dot{X}_i^{\text{nuc}} \xrightarrow{0} \quad (395)$$

$$-\overline{\rho X''_i u''_\theta u''_\theta / r} - \overline{\rho X''_i u''_\phi u''_\phi / r} - \overline{X''_i G_r^M} - \overline{X'' \nabla \cdot \tau_r} \quad (396)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (397)$$

$$-\overline{\rho X''_i u''_\theta u''_\theta / r} - \overline{\rho X''_i u''_\phi u''_\phi / r} - \overline{X''_i G_r^M} - \overline{\nabla \cdot X''_i \tau_r} + \overline{\tau_r \nabla X''_i} \quad (398)$$

$$\text{The viscoity } \tau \text{ is 2nd order tensor and } -\overline{\nabla \cdot X''_i \tau_r} = -\nabla_r \overline{X''_i \tau_{rr}} + \overline{X'' \tau_{\theta\theta} \tau_{\theta\theta} / r} + \overline{X'' \tau_{\phi\phi} \tau_{\phi\phi} / r} \quad (399)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (400)$$

$$-\overline{\rho X''_i u''_\theta u''_\theta / r} - \overline{\rho X''_i u''_\phi u''_\phi / r} - \overline{X''_i G_r^M} - \nabla_r (\overline{X''_i \tau_{rr}}) + \overline{X'' \tau_{\theta\theta} \tau_{\theta\theta} / r} + \overline{X'' \tau_{\phi\phi} \tau_{\phi\phi} / r} \quad (401)$$

$$-\overline{\tau_{rr} \partial_r X''_i} - \overline{\tau_{r\theta}(1/r) \partial_\theta X''_i} - \overline{\tau_{r\phi}(1/r \sin \theta) \partial_\phi X''_i} \quad (402)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (403)$$

$$-\overline{\rho X''_i u''_\theta u''_\theta / r} - \overline{\rho X''_i u''_\phi u''_\phi / r} - \overline{X''_i G_r^M} - \nabla_r (\overline{X''_i \tau_{rr}}) - \varepsilon_i \quad (404)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (405)$$

$$-\overline{\rho X''_i u''_\theta u''_\theta / r} - \overline{\rho X''_i u''_\phi u''_\phi / r} - \overline{X''_i G_r^M} + \mathcal{N}_{fi} \quad (406)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (407)$$

$$+ \overline{G_r^i} - \overline{X''_i G_r^M} + \mathcal{N}_{fi} \quad (408)$$

$$\bar{\rho}\tilde{D}_t(f_i/\bar{\rho}) = -\nabla_r f_i^r - f_i \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{X}_i - \overline{X''_i} \partial_r \bar{P} - \overline{X''_i} \partial_r \bar{P}' + \overline{u''_r} \rho \dot{X}_i^{\text{nuc}} \quad (409)$$

$$+ \mathcal{G}_i + \mathcal{N}_{fi} \quad (410)$$

The exact formulation of the geometry and viscosity terms is:

$$\mathcal{G}_i = \overline{G_r^i} - \overline{X''_i G_r^M} \quad (411)$$

$$\mathcal{N}_{fi} = -\nabla_r (\overline{X''_i \tau_{rr}}) - \overline{\tau_{r\theta}(1/r) \partial_\theta X''_i} - \overline{\tau_{r\phi}(1/r \sin \theta) \partial_\phi X''_i} + \overline{X'' \tau_{\theta\theta} \tau_{\theta\theta} / r} + \overline{X'' \tau_{\phi\phi} \tau_{\phi\phi} / r} \quad (412)$$

23.9 Mean composition equation in θ direction.

t.b.d

23.10 Mean A and Z flux equations

We can derive the composition flux equation using the general formula for second order moments, where we substitute c with A or Z and d with u_i .

$$\bar{\rho} \tilde{D}_t c'' \widetilde{d''} = \overline{c'' \rho D_t d} - \overline{\rho c'' u_n'' \partial_n \tilde{d}} + \overline{d'' \rho D_t c} - \overline{\rho d'' u_n'' \partial_n \tilde{c}} - \overline{\partial_n \rho c'' d'' u_n''} \quad (413)$$

$$\bar{\rho} \tilde{D}_t (f_A / \bar{\rho}) = \mathcal{N}_{fA} - \nabla_r f_A^r - f_A \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{A} - \overline{A'' \partial_r \bar{P}} - \overline{A'' \partial_r \bar{P'}} - \overline{u_r'' \rho A^2 \Sigma_\alpha \dot{X}_\alpha^{\text{nuc}} / A_\alpha} + \mathcal{G}_A \quad (414)$$

$$\begin{aligned} \bar{\rho} \tilde{D}_t (f_Z / \bar{\rho}) = & \mathcal{N}_{fZ} - \nabla_r f_Z^r - f_Z \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{Z} - \overline{Z'' \partial_r \bar{P}} - \overline{Z'' \partial_r \bar{P'}} - \overline{u_r'' \rho Z A \Sigma_\alpha (\dot{X}_\alpha^{\text{nuc}} / A_\alpha)} - \\ & - \overline{u_r'' \rho A \Sigma_\alpha (Z_\alpha \dot{X}_\alpha^{\text{nuc}} / A_\alpha)} + \mathcal{G}_Z \end{aligned} \quad (415)$$

23.11 Mean angular momentum flux equation

We can derive the angular momentum flux equation using the general formula for second order moments, where we substitute c with j_z and d with u_i .

$$\bar{\rho} \tilde{D}_t c'' \widetilde{d''} = \overline{c'' \rho D_t d} - \overline{\rho c'' u_n'' \partial_n \tilde{d}} + \overline{d'' \rho D_t c} - \overline{\rho d'' u_n'' \partial_n \tilde{c}} - \overline{\partial_n \rho c'' d'' u_n''} \quad (416)$$

$$\bar{\rho} \tilde{D}_t (f_{jz} / \rho) = - \nabla_r f_{jz}^r - f_{jz} \partial_r \tilde{u}_r - \tilde{R}_{rr} \partial_r \tilde{j}_z - \overline{j_z'' \partial_r \bar{P}} - \overline{j_z'' \partial_r \bar{P'}} + \mathcal{G}_{jz} + \mathcal{N}_{jz} \quad (417)$$

23.12 Pressure flux equation in r direction

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_r .

$$\begin{aligned} \tilde{D}_t \widetilde{c' d'} &= \overline{c' D_t d} - \overline{c' u_n'' \partial_n \bar{d}} + \overline{d' D_t c} + \overline{d' u_n'' \partial_n \bar{c}} - \overline{\partial_n u_n'' c' d'} + \overline{c' d'' \partial_n u_n''} \\ \tilde{D}_t \overline{P' u_r'} &= \overline{P' D_t u_r} - \overline{P' u_n'' \partial_n \bar{u}_r} + \overline{u_r' D_t \bar{P}} + \overline{u_r' u_n'' \partial_n \bar{P}} - \overline{\partial_n u_n'' P' u_r'} + \overline{P' u_r'' \partial_n u_n''} \\ \tilde{D}_t \overline{P' u_r'} &= \overline{P' D_t u_r} - \overline{P' u_r'' \partial_r \bar{u}_r} + \overline{u_r' D_t \bar{P}} + \overline{u_r' u_r'' \partial_r \bar{P}} - \nabla_r \overline{P' u_r'' u_r'} + \overline{P' u_r'' d''} \end{aligned} \quad (418)$$

The evolution equation for $D_t u_r$ (see Sect.18) is

$$\rho D_t (u_r) = + \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{rr}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\tau_{r\theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\tau_{r\phi}]) - G_r^M - \partial_r P \right) + \rho g_r \quad (419)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t (u_r) = - G_r^M / \rho - \partial_r P / \rho + g_r \quad (420)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (421)$$

By neglecting viscosity, it becomes:

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T) \quad (422)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_r} = \overline{P' (-G_r^M / \rho - \partial_r P / \rho + g_r)} - \overline{P' u''_r \partial_r \bar{u}_r} + \overline{u'_r ((1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S}))} + \overline{u'_r u''_r \partial_r \bar{P}} - \nabla_r \overline{P' u''_r u'_r} + \overline{P' u''_r d''} \quad (423)$$

$$\tilde{D}_t \overline{P' u'_r} = - \overline{P' G_r^M / \rho} - \overline{P' \partial_r P / \rho} + \overline{P' g_r} - \overline{P' u''_r \partial_r \bar{u}_r} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_r P d} - (\Gamma_3 - 1) \overline{u'_r \bar{P} d} + (\Gamma_3 - 1) \overline{u'_r \rho \varepsilon_{nuc}} + \overline{u'_r u''_r \partial_r \bar{P}} - \nabla_r \overline{P' u''_r u'_r} + \overline{P' u''_r d''} \quad (424)$$

$$\tilde{D}_t \overline{P' u'_r} = - \nabla_r f_p^r - f_p \partial_r \bar{u}_r + \overline{u'_r u''_r \partial_r \bar{P}} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_r P d} - (\Gamma_3 - 1) \overline{u'_r \bar{P} d} + (\Gamma_3 - 1) \overline{u'_r \rho \varepsilon_{nuc}} + \overline{P' u''_r d''} - \overline{P' G_r^M / \rho} - \overline{P' \partial_r P / \rho} \quad (425)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_r} = - \nabla_r f_p^r - f_p \partial_r \bar{u}_r + \overline{u'_r u''_r \partial_r \bar{P}} + \Gamma_1 \overline{u'_r P d} + (\Gamma_3 - 1) \overline{u'_r \rho \varepsilon_{nuc}} + \overline{P' u''_r d''} - \overline{P' G_r^M / \rho} - \overline{P' \partial_r P / \rho} \quad (426)$$

23.13 Pressure flux equation in x direction (Cartesian geometry)

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_x (like in previous section).

$$\tilde{D}_t \overline{P' u'_x} = \overline{P' D_t u_x} - \overline{P' u''_x \partial_x \bar{u}_x} + \overline{u'_x D_t \bar{P}} + \overline{u'_x u''_x \partial_x \bar{P}} - \nabla_x \overline{P' u''_x u'_x} + \overline{P' u''_x d''} \quad (427)$$

The evolution equation for $D_t u_x$ is https://en.wikipedia.org/wiki/Navier-Stokes_equations:

$$\rho D_t (u_x) = \nabla_x \tau_{xx} + \nabla_y \tau_{xy} + \nabla_z \tau_{xz} - \partial_x P + \rho g_x \quad (428)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t (u_x) = - \frac{\partial_x P}{\rho} + g_x \quad (429)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = -(1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1)(-P d + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (430)$$

By neglecting viscosity, it becomes:

$$D_t P = -(1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1)(-P d + \mathcal{S} + \nabla \cdot F_T) \quad (431)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_x} = \overline{P' (-\partial_x P / \rho + g_x)} - \overline{P' u''_x} \partial_x \bar{u}_x + \overline{u'_x} (-(1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1)(-P d + \mathcal{S} + \nabla \cdot F_T)) + \overline{u'_x u''_x} \partial_x \bar{P} - \nabla_x \overline{P' u''_x u'_x} + \overline{P' u''_x d''} \quad (432)$$

$$\tilde{D}_t \overline{P' u'_x} = -\overline{P' \partial_x P / \rho} + \overline{P' g_x} - \overline{P' u''_x} \partial_x \bar{u}_x - (1 - \Gamma_3 - \Gamma_1) \overline{u'_x P d} - (\Gamma_3 - 1) \overline{u'_x \rho \varepsilon_{nuc}} + \overline{u'_x u''_x} \partial_x \bar{P} - \nabla_x \overline{P' u''_x u'_r} + \overline{P' u''_x d''} \quad (433)$$

$$\tilde{D}_t \overline{P' u'_x} = -\nabla_x f_p^x - f_p \partial_x \bar{u}_x + \overline{u'_x u''_x} \partial_x \bar{P} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_x P d} - (\Gamma_3 - 1) \overline{u'_x \rho \varepsilon_{nuc}} + \overline{P' u''_x d''} - \overline{P' \partial_r P / \rho} \quad (434)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_x} = -\nabla_x f_p^x - f_p \partial_x \bar{u}_x + \overline{u'_x u''_x} \partial_x \bar{P} + \Gamma_1 \overline{u'_x P d} + (\Gamma_3 - 1) \overline{u'_x \rho \varepsilon_{nuc}} + \overline{P' u''_x d''} - \overline{P' \partial_x P / \rho} \quad (435)$$

23.14 Pressure flux equation in θ direction

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_θ .

$$\begin{aligned} \tilde{D}_t \widetilde{c' d'} &= \overline{c' D_t d} - \overline{c' u''_n} \partial_n \bar{d} + \overline{d' D_t c} + \overline{d' u''_n} \partial_n \bar{c} - \partial_n \overline{u''_n c' d'} + \overline{c' d'' \partial_n u''_n} \\ \tilde{D}_t \overline{P' u'_\theta} &= \overline{P' D_t u_\theta} - \overline{P' u''_\theta} \partial_n \bar{u}_\theta + \overline{u'_\theta D_t P} + \overline{u'_\theta u''_n} \partial_n \bar{P} - \partial_n \overline{u''_n P' u'_\theta} + \overline{P' u''_\theta} \partial_n \overline{u''_n} \\ \tilde{D}_t \overline{P' u'_\theta} &= \overline{P' D_t u_\theta} - \overline{P' u''_\theta} \partial_r \bar{u}_\theta + \overline{u'_\theta D_t P} + \overline{u'_\theta u''_r} \partial_r \bar{P} - \nabla_r \overline{P' u''_r u'_\theta} + \overline{P' u''_\theta d''} \end{aligned} \quad (436)$$

The evolution equation for $D_t u_\theta$ (see Sect.18) is

$$\rho D_t (u_\theta) = + \left(\frac{1}{r^2} \partial_r (r^2 [\tau_{\theta r}]) + \frac{1}{r \sin \theta} \partial_\theta (\sin \theta [\tau_{\theta \theta}]) + \frac{1}{r \sin \theta} \partial_\phi ([\tau_{\theta \phi}]) - G_\theta^M - \frac{1}{r} \partial_\theta P \right) + \rho g_\theta \quad (437)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t (u_\theta) = -\frac{G_\theta^M}{\rho} - \frac{1}{r} \frac{\partial_\theta P}{\rho} \quad (438)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + S + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (439)$$

By neglecting viscosity, it becomes:

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + S + \nabla \cdot F_T) \quad (440)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_\theta} = \overline{P' (-G_\theta^M / \rho - \partial_\theta P / \rho)} - \overline{P' u''_r \partial_r \bar{u}_\theta} + \overline{u'_\theta} (-(1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + S + \nabla \cdot F_T)) + \overline{u'_\theta u''_r \partial_r \bar{P}} - \nabla_r \overline{P' u''_r u'_\theta} + \overline{P' u''_\theta d''} \quad (441)$$

$$\tilde{D}_t \overline{P' u'_\theta} = - \overline{P' G_\theta^M / \rho} - \overline{P' \partial_\theta P / \rho} - \overline{P' u''_r \partial_r \bar{u}_r} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_\theta P d} - (\Gamma_3 - 1) \overline{u'_\theta \rho \varepsilon_{nuc}} + \overline{u'_\theta u''_r \partial_r \bar{P}} - \nabla_r \overline{P' u''_r u'_\theta} + \overline{P' u''_\theta d''} \quad (442)$$

$$\tilde{D}_t \overline{P' u'_\theta} = - \nabla_r f_p^\theta - f_p \partial_r \bar{u}_\theta + \overline{u'_\theta u''_r \partial_r \bar{P}} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_\theta P d} - (\Gamma_3 - 1) \overline{u'_\theta \rho \varepsilon_{nuc}} + \overline{P' u''_\theta d''} - \overline{P' \partial_\theta P / (\rho r)} \quad (443)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_\theta} = - \nabla_r f_p^\theta - f_p \partial_r \bar{u}_\theta + \overline{u'_\theta u''_r \partial_r \bar{P}} + \Gamma_1 \overline{u'_\theta P d} + (\Gamma_3 - 1) \overline{u'_\theta \rho \varepsilon_{nuc}} + \overline{P' u''_\theta d''} - \overline{P' \partial_\theta P / (\rho r)} \quad (444)$$

23.15 Pressure flux equation in y direction (Cartesian geometry)

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_y (like in previous section).

$$\tilde{D}_t \overline{P' u'_y} = \overline{P' D_t u_y} - \overline{P' u''_x \partial_x \bar{u}_y} + \overline{u'_y D_t \bar{P}} + \overline{u'_y u''_x \partial_x \bar{P}} - \nabla_x \overline{P' u''_x u'_y} + \overline{P' u''_y d''} \quad (445)$$

The evolution equation for $D_t u_y$ is https://en.wikipedia.org/wiki/Navier-Stokes_equations:

$$\rho D_t(u_y) = \nabla_x \tau_{yx} + \nabla_x \tau_{yy} + \nabla_x \tau_{yz} - \partial_y P \quad (446)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t(u_y) = - \frac{\partial_y P}{\rho} \quad (447)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = -(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (448)$$

By neglecting viscosity, it becomes:

$$D_t P = -(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T) \quad (449)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_y} = \overline{P' (-\partial_y P / \rho)} - \overline{P' u''_x} \partial_x \bar{u}_y + \overline{u'_y} (-(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T)) + \overline{u'_y u''_x} \partial_x \bar{P} - \nabla_x \overline{P' u''_x u'_y} + \overline{P' u''_y d''} \quad (450)$$

$$\tilde{D}_t \overline{P' u'_y} = -\overline{P' \partial_y P / \rho} - \overline{P' u''_x} \partial_x \bar{u}_y - (1 - \Gamma_3 + \Gamma_1) \overline{u'_y P d} - (\Gamma_3 - 1) \overline{u'_y P d} + (\Gamma_3 - 1) \overline{u'_y \rho \varepsilon_{nuc}} + \overline{u'_y u''_x} \partial_x \bar{P} - \nabla_x \overline{P' u''_y u'_x} + \overline{P' u''_y d''} \quad (451)$$

$$\tilde{D}_t \overline{P' u'_y} = -\nabla_x f_p^y - f_p \partial_x \bar{u}_y + \overline{u'_y u''_x} \partial_x \bar{P} - (1 - \Gamma_3 + \Gamma_1) \overline{u'_y P d} - (\Gamma_3 - 1) \overline{u'_y P d} + (\Gamma_3 - 1) \overline{u'_y \rho \varepsilon_{nuc}} + \overline{P' u''_y d''} - \overline{P' \partial_y P / \rho} \quad (452)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_y} = -\nabla_x f_p^y - f_p \partial_x \bar{u}_y + \overline{u'_y u''_x} \partial_x \bar{P} + \Gamma_1 \overline{u'_y P d} + (\Gamma_3 - 1) \overline{u'_y \rho \varepsilon_{nuc}} + \overline{P' u''_y d''} - \overline{P' \partial_y P / \rho} \quad (453)$$

23.16 Pressure flux equation in ϕ direction

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_ϕ .

$$\begin{aligned} \tilde{D}_t \widetilde{c' d'} &= \overline{c' D_t d} - \overline{c' u''_n} \partial_n \bar{d} + \overline{d' D_t c} + \overline{d' u''_n} \partial_n \bar{c} - \partial_n \overline{u''_n c' d'} + \overline{c' d'' \partial_n u''_n} \\ \tilde{D}_t \overline{P' u'_\phi} &= \overline{P' D_t u_\phi} - \overline{P' u''_\phi} \partial_n \bar{u}_\phi + \overline{u'_\phi D_t P} + \overline{u'_\phi u''_n} \partial_n \bar{P} - \partial_n \overline{u''_n P' u'_\phi} + \overline{P' u''_\phi \partial_n u''_n} \\ \tilde{D}_t \overline{P' u'_\phi} &= \overline{P' D_t u_\phi} - \overline{P' u''_\phi} \partial_r \bar{u}_\phi + \overline{u'_\phi D_t P} + \overline{u'_\phi u''_r} \partial_r \bar{P} - \nabla_r \overline{P' u''_r u'_\phi} + \overline{P' u''_\phi d''} \end{aligned} \quad (454)$$

The evolution equation for $D_t u_\phi$ (see Sect.18) is

$$\rho D_t(u_\phi) = + \left(\frac{1}{r^2} \partial_r(r^2 [\tau_{\phi r}]) + \frac{1}{r \sin \phi} \partial_\phi(\sin \phi [\tau_{\phi \theta}]) + \frac{1}{r \sin \phi} \partial_\phi([\tau_{\phi \phi}]) - G_\phi^M - \frac{1}{r \sin \theta} \partial_\phi P \right) + \rho g_\phi \quad (455)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t(u_\phi) = -\frac{G_\phi^M}{\rho} - \frac{1}{r \sin \theta} \frac{\partial_\phi P}{\rho} \quad (456)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (457)$$

By neglecting viscosity, it becomes:

$$D_t P = - (1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T) \quad (458)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_\phi} = \overline{P' \left(-G_\phi^M / \rho - \partial_\phi P / \rho \right)} - \overline{P' u''_r} \partial_r \bar{u}_\phi + \overline{u'_\phi} \left(-(1 - \Gamma_3 + \Gamma_1) P d + (\Gamma_3 - 1) (-P d + \mathcal{S} + \nabla \cdot F_T) \right) + \overline{u'_\phi u''_r} \partial_r \bar{P} - \nabla_r \overline{P' u''_r u'_\phi} + \overline{P' u''_\phi d''} \quad (459)$$

$$\tilde{D}_t \overline{P' u'_\phi} = - \overline{P' G_\phi^M / \rho} - \overline{P' \partial_\phi P / \rho} - \overline{P' u''_r} \partial_r \bar{u}_r - (1 - \Gamma_3 - \Gamma_1) \overline{u'_\phi P d} - (\Gamma_3 - 1) \overline{u'_\phi \rho \varepsilon_{nuc}} + \overline{u'_\phi u''_r} \partial_r \bar{P} - \nabla_r \overline{P' u''_r u'_\phi} + \overline{P' u''_\phi d''} \quad (460)$$

$$\tilde{D}_t \overline{P' u'_\phi} = - \nabla_r f_p^\phi - f_p \partial_r \bar{u}_\phi + \overline{u'_\phi u''_r} \partial_r \bar{P} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_\phi P d} - (\Gamma_3 - 1) \overline{u'_\phi \rho \varepsilon_{nuc}} + \overline{P' u''_\phi d''} - \overline{P' \partial_\phi P / (\rho r \sin \theta)} \quad (461)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_\phi} = - \nabla_r f_p^\phi - f_p \partial_r \bar{u}_\phi + \overline{u'_\phi u''_r} \partial_r \bar{P} + \Gamma_1 \overline{u'_\phi P d} + (\Gamma_3 - 1) \overline{u'_\phi \rho \varepsilon_{nuc}} + \overline{P' u''_\phi d''} - \overline{P' \partial_\phi P / (\rho r \sin \theta)} \quad (462)$$

23.17 Pressure flux equation in z direction (Cartesian geometry)

We can derive the pressure flux equation using the general formula for second order moments, where we substitute c with P and d with u_z (like in previous section).

$$\tilde{D}_t \overline{P' u'_z} = \overline{P' D_t u_z} - \overline{P' u''_x} \partial_x \bar{u}_z + \overline{u'_z D_t P} + \overline{u'_z u''_x} \partial_x \bar{P} - \nabla_x \overline{P' u''_x u'_z} + \overline{P' u''_z d''} \quad (463)$$

The evolution equation for $D_t u_z$ is https://en.wikipedia.org/wiki/Navier-Stokes_equations:

$$\rho D_t(u_z) = \nabla_x \tau_{zx} + \nabla_x \tau_{zy} + \nabla_x \tau_{zz} - \partial_z P \quad (464)$$

By neglecting viscosity and dividing by ρ , it becomes:

$$D_t(u_z) = - \frac{\partial_z P}{\rho} \quad (465)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = -(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (466)$$

By neglecting viscosity, it becomes:

$$D_t P = -(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T) \quad (467)$$

We continue here by putting everything together and neglecting heat flux due to conduction and radiation F_T :

$$\tilde{D}_t \overline{P' u'_z} = \overline{P' (-\partial_z P / \rho)} - \overline{P' u''_x \partial_x \bar{u}_z} + \overline{u'_z} \left(-(1 - \Gamma_3 + \Gamma_1)Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T) \right) + \overline{u'_z u''_x \partial_x \bar{P}} - \nabla_x \overline{P' u''_x u'_z} + \overline{P' u''_z d''} \quad (468)$$

$$\tilde{D}_t \overline{P' u'_z} = -\overline{P' \partial_z P / \rho} - \overline{P' u''_x \partial_x \bar{u}_z} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_z Pd} - (\Gamma_3 - 1) \overline{u'_z Pd} + (\Gamma_3 - 1) \overline{u'_z \rho \varepsilon_{nuc}} + \overline{u'_z u''_x \partial_x \bar{P}} - \nabla_x \overline{P' u''_z u'_x} + \overline{P' u''_z d''} \quad (469)$$

$$\tilde{D}_t \overline{P' u'_z} = -\nabla_x f_p^z - f_p \partial_x \bar{u}_z + \overline{u'_z u''_x \partial_x \bar{P}} - (1 - \Gamma_3 - \Gamma_1) \overline{u'_z Pd} - (\Gamma_3 - 1) \overline{u'_z Pd} + (\Gamma_3 - 1) \overline{u'_z \rho \varepsilon_{nuc}} + \overline{P' u''_z d''} - \overline{P' \partial_z P / \rho} \quad (470)$$

With a little more algebraic modifications, we get the final form:

$$\tilde{D}_t \overline{P' u'_z} = -\nabla_x f_p^z - f_p \partial_x \bar{u}_z + \overline{u'_z u''_x \partial_x \bar{P}} + \Gamma_1 \overline{u'_z Pd} + (\Gamma_3 - 1) \overline{u'_z \rho \varepsilon_{nuc}} + \overline{P' u''_z d''} - \overline{P' \partial_z P / \rho} \quad (471)$$

24 Derivation of variance equations

The derivation of final variance equations can be achieved by utilization of general formula for variances (see Sect.22.3) and similar algebraic manipulation as shown in previous sections.

We show derivation of enthalpy variance equation only as an example

24.1 Enthalpy variance equation

We begin with general formula for Favrian variance equation:

$$\overline{\rho \tilde{D}_t \widetilde{c'' c''}} = +2\overline{c'' \rho D_t c} - 2\overline{\rho c'' u''_n \partial_n \widetilde{c}} - \overline{\partial_n \rho c'' c'' u''_n} \quad (472)$$

We substitute specific enthalpy $h = \epsilon_I + P/\rho$ for the c and get:

$$\overline{\rho \tilde{D}_t \widetilde{h'' h''}} = +\overline{2h'' \rho D_t h} - 2\overline{\rho h'' u''_n \partial_n \widetilde{h}} - \nabla_r \overline{\rho h'' h'' u''_r} \quad (473)$$

Now, we have to derive evolution equation for specific enthalpy:

$$\rho D_t h = \rho \partial_t h + u_r \partial_r h = \partial_t \rho h + \nabla_r \rho u_r h = \partial_t (\rho \epsilon_I + P) + \nabla_r \rho u_r (\epsilon_I + P/\rho) \quad (474)$$

$$\rho D_t h = \partial_t \rho \epsilon_I + \nabla_r \rho u_r \epsilon_I + \partial_t P + \nabla_r u_r P \quad (475)$$

$$\rho D_t h = \rho D_t \epsilon_I + \partial_t P + u_r \partial_r P + P \nabla_r u_r \quad (476)$$

$$\rho D_t h = \rho D_t \epsilon_I + D_t P + P \nabla_r u_r \quad (477)$$

For the internal energy evolution (see Sect.21.5) and neglecting viscosity and thermal transport due to conduction and radiation, we have :

$$\rho D_t \epsilon_I = -Pd + \rho \varepsilon_{nuc} \quad (478)$$

The evolution equation for $D_t P$ (see Sect.21.8) is

$$D_t P = -(1 - \Gamma_3 + \Gamma_1) Pd + (\Gamma_3 - 1)(-Pd + \mathcal{S} + \nabla \cdot F_T + \tau_{ij} \partial_i u_j) \quad (479)$$

Now, let us combine everything together:

$$\rho D_t h = -Pd + \rho \varepsilon_{nuc} - (1 - \Gamma_3 + \Gamma_1) Pd - (\Gamma_3 - 1) Pd + (\Gamma_3 - 1) \rho \varepsilon_{nuc} + Pd \quad (480)$$

$$\rho D_t h = -(1 - \Gamma_3 + \Gamma_1) Pd - (\Gamma_3 - 1) Pd + \Gamma_3 \rho \varepsilon_{nuc} \quad (481)$$

$$\rho D_t h = (\Gamma_3 - 1) Pd - \Gamma_1 Pd - (\Gamma_3 - 1) Pd + \Gamma_3 \rho \varepsilon_{nuc} \quad (482)$$

$$\rho D_t h = (\Gamma_3 - 1) Pd - \Gamma_1 Pd - (\Gamma_3 - 1) Pd + \Gamma_3 \rho \varepsilon_{nuc} \quad (483)$$

$$\rho D_t h = -\Gamma_1 Pd + \Gamma_3 \rho \varepsilon_{nuc} \quad (484)$$

Substituting $\rho D_t h$ to our general equation for Favrian enthalpy variance, we get

$$\bar{\rho} \widetilde{D}_t h'' \widetilde{h}'' = + \overline{2h''(-\Gamma_1 Pd + \Gamma_3 \rho \varepsilon_{nuc})} - 2\bar{\rho} \widetilde{h''} \widetilde{u_n''} \partial_r \widetilde{h} - \nabla_r \overline{\rho h'' h'' u_r''} \quad (485)$$

$$\bar{\rho} \widetilde{D}_t h'' \widetilde{h}'' = -2\Gamma_1 \overline{h'' Pd} + 2\Gamma_3 \overline{h'' \rho \varepsilon_{nuc}} - 2f_h \partial_r \widetilde{h} - \nabla_r f_h^r \quad (486)$$

After rearranging of these terms, we get final form or the equation to be:

$$\bar{\rho} \widetilde{D}_t h'' \widetilde{h}'' = -\nabla_r f_h^r - 2f_h \partial_r \widetilde{h} - 2\Gamma_1 \overline{h'' Pd} + 2\Gamma_3 \overline{h'' \rho \varepsilon_{nuc}} \quad (487)$$
